THE AMERICAN FLORIST

A WEEKLY JOURNAL FOR THE TRADE

America is "the Prow of the Vessel; there may be more comfort A... but we are the first to touch Unknown Seas."

Vol. XIII. *CHICAGO AND NEW YORK, AUGUST 7, 1897.* *No. 479*

Goodenhh Mass. Agt. Co. 1897

THE AMERICAN FLORIST

Copyright 1897, by American Florist Company. Entered as Second-Class Mail Matter.

PUBLISHED EVERY SATURDAY BY

THE AMERICAN FLORIST COMPANY.
322 Dearborn Street, Chicago.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Address all communications to

AMERICAN FLORIST COMPANY,
322 Dearborn Street, CHICAGO.

Eastern Office: 67 Bromfield St., Boston.

This paper is a member of the Associated Trade Press and of the Chicago Trade Press Association.

The Thirteenth Annual Meeting

— OF THE —

SOCIETY OF AMERICAN FLORISTS

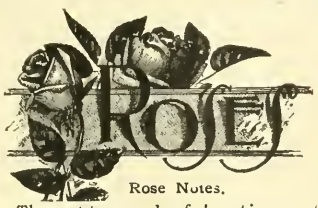
— WILL BE HELD AT —

PROVIDENCE, R. I.,

AUGUST 17, 18, 19 & 20, 1897.

Members may remit the annual dues ($3.00) to the secretary prior to the meeting, thus avoiding the crowd and relieving the officers on the opening day. Badge for 1897 will be sent by mail to those who remit in advance of the meeting.

Intending members can obtain any information wanted by addressing the secretary.



OFFICERS:

ADAM GRAHAM, Cleveland, Ohio, president; FARQUHAR MACRAE, Providence, R. I., vice-president; W. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; H. B. BEATTY, Oil City, Pa., treasurer.

LAST CALL for advs. for the Convention Number. Copy must reach us by August 11 to be in time.

Rose Notes.

The past two weeks of almost incessant rain will have been anything but beneficial to the stock recently planted out. The tendency of such weather is to cause a soft weak growth, lacking character and texture, very liable to be attacked by parasitic and insect pests, and so soft and succulent that the first hot sunny day will take all the stiffness out of them in an hour, and in all probability leave the foliage burnt and disfigured. Perhaps the best antidote will be a minimum amount of moisture in the air and at the root in the absence of sunshine, and prompt and frequent spraying when the heat and sun does finally strike them.

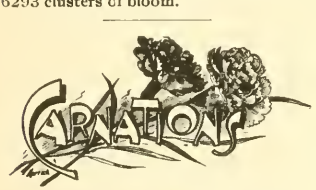
The advantages of a tight roof are very evident at this time; such a deluge of rain finds every opening, and where the glass is loose the leakage is frightful. Drip is very objectionable and injurious in a rose house, whatever varieties we may grow, as it sours the soil, spoils the roots and makes a bad mess generally; but it is almost death to varieties that are very susceptible to black spot. Anyone growing American Beauty under a leaky roof and managing to keep down black spot in such weather should congratulate themselves, but should at the same time set to work as soon as we have settled weather and make the roof tight; a similar spell of rainy weather later in the season might result in disaster. A mixture of linseed oil, white lead and fine white sand mixed just thin enough to pass through a putty bulb will make a very poor roof as tight as a drum, if time is taken to do the work well; the only objection to it is the difficulty there is in removing it in case of breakage and repairs.

The best time to fight black spot on Beauties is before it makes its appearance, or in other words, it is very much better and easier to keep clear of it than to cure it, and in most cases, provided we have a good light house, well ventilated, a tight roof and a well drained floor and we use good common sense in our treatment, we need not have much black spot at this season of the year. As a precautionary measure I would discontinue spraying in the afternoon, in fact I would water and syringe Beauties and all of that class early in the morning, so that the moisture may be dried up completely before nightfall. I do not know of any conditions more favorable for the development of the black spot or that will aggravate it once it has got a start more than wet soil and a close, humid atmosphere, especially at night. How many beginners and those who have the organ of caution abnormally developed make the mistake of coddling their roses and treating them as exotics, and perhaps some of us who are not beginners have been guilt of doing the same thing at times; if a little breeze should happen to stir the foliage some of us will make a rush for the ventilators, and should the high temperature of the evening tempt us to leave on more than the regulation "crack" of air and the hot night should change to a cool morning, we shall haste to make a careful scrutiny of the plants, and breathe more freely when we are satisfied that no harm has been done. It the rose is so tender and delicate that the least atmospheric change must be taken into account and its influence counteracted by a careful manipulation of the ventilators or our plants will become a prey to mildew, black spot or other ills, then the fault must be in our method of treatment, and not in the rose itself.

It has often struck me as a little peculiar that we should be liberal in the use of water, in providing manure and other fertilizers, in everything in fact that costs money, while we are stingy and niggardly in our allowance of that which costs us nothing, but which is after all one of the most valuable aids in the development of animal or plant life, fresh air. Instead of being careful to exclude as much as possible, believing it to be a dangerous thing, we should be anxious to give our plants the benefit of as much of it as we possibly can. I have had roses growing in houses that had ventilators on both sides and at the ridge, and have left them wide open day and night in warm weather all through the summer, and instead of being covered with mildew they were the cleanest and healthiest plants we had. Roses accustomed to having an abundance of ventilation will not be in danger of taking mildew whenever there is a slight change in the outdoor temperature, but a reversal of these conditions will be a sure precursor of mildew, and even on quite cool nights there is far less risk from having too much than too little air. I have seen roses grown on the exotic plan, and almost every other, but the most beautiful that I have ever seen, plants the very picture of health and vigor, with large deep colored foliage and hard, short jointed wood, just what we want to start the winter with, have invariably been grown under conditions approximating those of nature. I repeat for the benefit of the inexperienced, "do not be afraid of ventilating freely during the night."

Should any of the young plants show signs of red spider on the lower leaves this is the time to go for it in earnest; it is always unfortunate (or worse) to have to fight spider in the fall when the days

are short and the nights moist, and the use of a minimum amount of water is in order; so to avoid trouble later we must annihilate it now, and then keep it down for good.



Frequent stirring of the surface of the soil in the benches should not be overlooked at this time; it helps to keep it in a sweet and wholesome state, is agreeable to the eye, and encourages root action.

Green fly will bear looking after; he works while we sleep, and before we know it has often done more damage than we care to tell. Fumigate as often as the weather will permit. ROBT. SIMPSON.

A Hedge of Crimson Rambler.

No new plant of recent introduction has attained such widespread popularity in a short time as has the Crimson Rambler rose. Its extraordinary vigor, its freedom and brilliancy of bloom, its hardiness and general adaptability give it a position in which it stands without a rival and everything claimed for it when introduced has been more than realized.

Its availability as a hedge plant has been demonstrated by Mr. Wm. Duckham, gardener on the estate of Mr. D. Willis James at Madison, N. J., where a hedge 135 feet long was planted in May, 1896, and in June, 1897, thirteen months after planting, presented the fine appearance shown in our photograph which was taken on June 20. The plants when set out were from pots, on own roots, and grown by J. N. May. The shoots are tied to a wire support, stretched between iron posts. About the time that the photograph was taken there were counted 6293 clusters of bloom.

The American Carnation Society.

EDITOR AMERICAN FLORIST: My attention has been called to an article in the *New England Florist* over the signature of Mr. Lothrop Wight. The officers of the American Carnation Society have no desire to prevent Mr. Wight from throwing mud in any direction he chooses, but as some of the erroneous statements he makes may tend to defeat the objects for which the August meeting is called it seems necessary that they be corrected.

The calling of a meeting at Providence is neither a direct nor an indirect violation of article six of the constitution nor of any other article of the constitution nor of any bylaw. Article six provides "The society shall hold an annual meeting" (not "one only" as Mr. Wight has it) and sets forth when and how it shall be held. There is not either in this article or any other, any prohibition, either expressed or implied, against the holding of other meetings.

The meeting at Providence can not take action which will be in any way binding on the society unless ratified at the regular annual meeting.

There will be many members of the society present at Providence and it is desired that they meet and carefully examine into the present state of affairs; those who are unable to be present are earnestly requested to forward to the secretary any suggestions they may desire as to changes in methods or management. These suggestions can then be tabulated and published and each member will go to the February meeting fully informed and matters can be disposed of quickly and intelligently.

In closing, permit me to say, that I believe the members of the American Carnation Society as a body, are, in intelligence, in honesty and in earnestness "the peers" of any trade organization in existence. They will gladly receive and adopt any suggestions of value but will not be influenced against their better judgment by any amount of vituperation and abuse. W. N. RUDD, President.

Growing Lilium Harrisii Bulbs.

How far south is it necessary to go to make a success of growing Lilium Harrisii? How long does it take to grow the bulbs to a salable size? R.

I would not like to answer the question as to how far south to go to make a success of growing Harrisii lilies, as it would be largely guess work, I having no data to work from. I do know that good bulbs have been grown in Texas in one year and I can see no reason why they could not be grown in any of the Gulf States as quickly as in Bermuda.

Babylon, N. Y. JAMES DEAN.

As to how far south one must go to grow Lilium Harrisii I do not know, but I believe anywhere north of Florida would not be a success, and even there it would be best to get below the frost line, as the natural time for L. Harrisii to grow is in the winter months. As to how long it takes to grow salable bulbs I can only give my experience under glass here. Scales or small bulblets sown in September will make 5 to 7-inch size by next July, that is, many of them, say about one-half, and if planted another year will make from 7 to 12 inches.

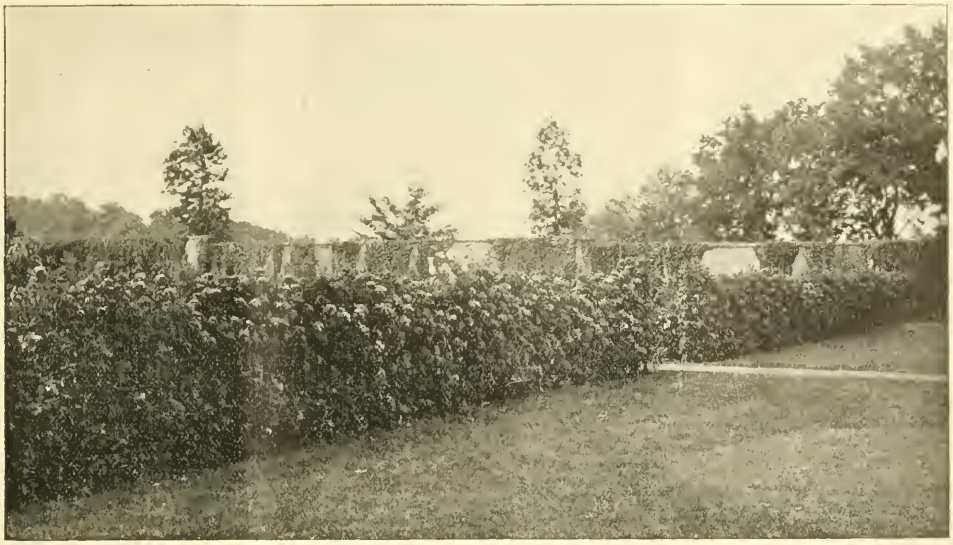
Phila., Pa. WM. K. HARRIS.

I do not know of any place in this country where Lilium Harrisii has been grown successfully. It might be done if grown far enough south to be below the frost line. The lily starts into growth early, and makes a succulent stem, which is killed by frost, so that it is liable to be badly damaged anywhere that frost reaches it. In Bermuda the bulbs are planted in August and make a continuous growth, ripening in June, so that they have the entire winter to grow, with no danger of frost. This is the reason why the bulb luxuriates and grows in Bermuda. If it could be grown here below the frost line there are no doubt places in this country where it could be done successfully, although I believe it has been tried in California, but without success.

There are two reasons why Bermuda excels all other places for the cultivation of this article—there is no frost to interfere with its growth, and the bulb ripens earlier than it could be made to ripen in any other locality, which makes it particularly advantageous for forcing purposes for florists. I know of no locality in this country where Harrisii can be grown where it will complete its growth as early as in Bermuda. I presume that the present tariff will stimulate its culture again, but when Harrisii was first introduced there was almost an equally high duty, which together with the high prices which then prevailed created quite an incentive to its culture here; and I believe it was attempted in a great many localities, but, so far as I know, none of these ventures proved a success. There are a great many drawbacks in Bermuda to the culture of this or any other crop. Lack of fertility of soil and difficulty of obtaining manure makes its culture very expensive.

Tarrytown, N. Y. F. R. PIERSON.

We think the above question the most important ever asked. It may be the means of saving $60,000 in gold annually to the nation. I would begin at Norfolk, but think the chances better in South Carolina and southward, keeping near the sea coast. I think from two to three years would be long enough. The new Secretary of Agriculture, Mr. Wilson, has the matter in hand, and intends to do all he can to promote the industry.



WM. R. SMITH.

Miscellaneous Seasonable Hints.

About now your chrysanthemums will want attention in tying up or supporting in one way or another. Short varieties such as Ivory, Lincoln or Maud Dean, that can be grown on a side bench, will do with a stake of some sort, but for taller varieties that are grown on a middle bench a stake is not the thing; it is expensive, unsightly and if over 4 feet long difficult to keep in position. The steel wire stake commonly used for roses is expensive unless you have them; then use them, but they need tying to a wire at top to keep them from falling about.

The cheapest and easiest plan for supporting 'mums that I have found is a copy of Mr. Harry Dale's plan of tying roses. Stretch a small wire across the bed near every row of plants, but keep it a little off the bed by tacking small strips of wood one inch thick on edge board of bench or bed. Stretch similar wires from bar to bar above the plants, or if more convenient (and it is better for tying) let the wires on top run lengthwise of the house, a wire above every row. From bottom to top at every plant run a coarse cheap string. They are put on in no time; a man on the path fastening the string to the bench wire, another man on the bench to tie and cut off string at top, will put up several thousand strings a day. This does not make a rigid fastening like a cane stake, but it is none the worse for that, and as long as the string is there your stems will be straight, providing you tie them up as they grow. In removing the plants after crop is cut you have no stakes to bother with; a cut at top and bottom removes the whole business. Most likely your crop of 'mums will be followed by lilies and the bottom wire can be taken off and if thought a saving can be stored away for future use; the top wire will not be in your way in the least, and can remain there for another year.

It will soon be time to make up your mind how many shoots you will allow to each plant, and thin out accordingly. If first-class flowers are wanted one stem and flower is what you want. If good but moderate sized flowers are what your trade demands, two and in some varieties three stems to a plant will do, but don't attempt to grow two flowers on one stem unless you want sprays, and I have not seen any demand for them of late. If there is any shade on your houses left over from your plant trade get it off at once. Chrysanthemums want no shade after they leave the cutting bench. This season has been very peculiar. Two weeks ago weather of the Sahara, when to advise careful watering would seem folly; this past two weeks incessant rain

HEDGE OF CRIMSON RAMBLER ROSE.

and no drying out; so be careful of water just now until your plants get a strong growth on them. We have been little bothered with either the green or black aphis so far, but once a week syringe the plants with the rose leaf extract of tobacco at a strength of fifty to one.

There is very little to propagate just now in ordinary greenhouse stock. If you sold out of coleus or any varieties get some cuttings from outside, see that they are free of mealy bug and start them going. A few dozen plants in 3-inch pots in October will do for stock and stand a low temperature much better than a cutting just started, and that is a time that we are liable to have a cool night temperature in our plant houses, sometimes from neglect in starting fires and sometimes to save a little coal.

The best way to winter over the most valuable of the alternantheras, paronychioides major, the bright red, is to take the cuttings from the flower garden now, fill flats of convenient size with two inches of light sandy loam, and into that put the cuttings thickly. They will root like chickweed now and before winter will be sturdy little plants and will survive, if kept dry, in any moderately warm house. In flats they can be handled in quantity with little expense and will take a back seat to accommodate more valuable plants at any time. I single out this variety for this treatment because it is really hard to winter. The other varieties are easily kept over. A few old plants can be lifted in September and cuttings made in spring in time for the hotbeds, the only place to grow alternantheras.

Young primulas and cinerarias now in 2-inch pots don't enjoy tropical weather and should be given all the sunlight they can bear, if possible mornings and evenings, and above all be in a house where they can have all possible ventilation. If you would not forget them a cold frame would be best of all, but during heavy rains and during the hot hours of the day they must be protected.

The middle of August is a good time to sow pansy seed, if you have the convenience to protect them with glass during winter. If they are to take care of themselves in the open field sow first week of August. Purchase the best strain of seed you can find, and depend upon it that when it is costly seed it pays to sow in drills, the drills two or three inches apart. Sow in a frame in light rich soil and shade till the plants are well up. I don't know whether my plan of making a drill for this sort of sowing is original; I think it is. Get a rod one inch square with sharp angles and the length of your frame, and just press one edge of the stick into the soil. It will make just the required drill. Sow thinly and cover lightly, just enough to cover the seed. You can do that by brushing in a little of the soil from side of drill. This seems too simple to write about, but sowing seed is a particular operation and the poor seedsman often gets blamed for a bungling job.

W. SCOTT.

Distribution of Color.

"Half and half" is a lazy solution to the frequent question "How many of each color?" How very unlike nature's mathematics! Who ever found in a flower or plant half and half of such colors? But yet who ever found one color absolutely alone in any one flower? It is often a pertinent question as to what proportion of color shall be employed to best advantage in a group. Is a solid color, that is one kind of flowers, making an unrelieved mass of color, to be preferred at all to a combination? From what source other than the opinion of decorators can one obtain reliable hints? I take it that every well cultivated flower or plant or any wild bit of grouping furnishes a pattern marvelously beyond what formulas a decorator is pleased to call original. At best we can be but intelligent copyists of nature. Having in mind then this query, let us attempt to analyze a few specimens easily obtained at this season, such as the Gladiolus Marie Lemoine, the Lord Beaconsfield Pansy, Blanche Ferry pea and Coreopsis lanceolata.

But permit just a reference to the general distribution of color. The most common color in all the world is green, from which fact we as decorators, have yet much to learn. If the permanent wall decoration is unsuited for a background, form a new one of foliage secured to light wooden frames or wire screens. The color may thus be selected with reference to the flowers to be used. It is a point well taken against florists that they do not use enough green, if for no other reason than its lasting qualities compared with flowers. When wild smilax will last for weeks and Asparagus plumosus will cling to a picture all winter and still retain its form and color, there is no reason why a house of even modest pretensions should be without its green nook from frost till spring.

The next most widely distributed color is yellow. I have yet to find the flower without some yellow, either in composition or in more or less distinct markings, and this is sufficient to establish the theory that there is a yellow which will combine with every other color, but we have not always the flowers in cultivation that would be suited to the purpose. If we could find the yellow whose tone coincides with the soft crimson tinged yellow employed in the stamens of the Jacq rose, we would have found a fitting companion color for that touchy red.

Now let us proceed to our individual studies; in the first one named Marie Lemoine, if we read aright, there are four distinct colors; a purplish red, some yellow, a touch of green, a little violet found on the anthers. The pink which gives a pronounced tone to the flower is but a tint of the blotch of purplish red extending from the throat upwards, retaining to the very lightest edges tint of purple. This red, including its tints, occupies fully five-sixths of the surface of the flower; about one-eighth is in green and violet, and the remaining one-ninth is yellow.

This is but a rough estimate and intended to illustrate this one principle, that one color is always greatly in excess and the subordinate colors are found to be of unequal strength. There is no half and half. It may be observed here, too, that the red is not only in excess, but it permeates every other color in all parts of the flower. It is the basis of harmony. It enters into the yellow, the green and the violet in degrees of strength varying from the dark spot on the lower central petal to the gentle surrender on the filament, and even on the delicate pistils faint pink streaks can be traced with the microscope.

In the Pansy Lord Beaconsfield, there are violet, white, orange-yellow and green, the violet being predominant, thus furnishing a fine illustration of the same principle.

In the Blanche Ferry pea there is a network of mauvelsh-red threads connecting the white and light crimson petals. The light crimson is the master color, overpowering in quality the white and small amount of dull yellow, and asserting itself everywhere throughout the flower.

Coreopsis lanceolata affords a fine example of the same law in the predominance of the orange-yellow over the brown and green displayed in modest amounts among the stamens and pistils.

Not only under our feet is the feast of color spread, but over our heads the sky is continually painting abstract lessons in color. To-night it is a beautiful dark blue, skirted about the horizon with crimson-pinkish green exphasized in the west by a great curtain against the same matchless blue merging into the thin, dim veil cast over the distant hills and woods and water. Could we catch but a faint part of this free yet distinct and perfect purpose which works around us, we could not fail to put the breath of life into our creations. In flowers where the colors seem at first glance to be sharply contrasted and laid in against each other abruptly, it will be found upon closer examination that there are tiny lines and points of one color running far into the opposing color. In no flower is there found but one color tone, let alone pure unmixed color. In gladiolus containing mauve, there are its own peculiar yellows, and no very undecided yellow at that. Dark colors when in smaller quantities are retiring as in the gladiolus before mentioned.

From the foregoing observations the following applications may be drawn: While a group of one kind of flowers, for example, Meteor roses, is to be greatly admired for simplicity and richness, there may be introduced one or two additional colors with perfectly good taste, providing the surroundings and background are not conspicuous. In this case there would best be Perle and Mermet roses since the reddish yellow of the Perle has an affinity for the red of the Meteor, and the pink of the Mermet is a tint of the Meteor red. If the bunch consists of two dozen about eighteen or twenty might be Meteors, about three or four Perles and one or two Mermets gracefully crowning the group. To be sure, clumps of one variety of plants are often seen, and quite as often there is a relief of some kind near by. A patch of Black-eyed Susans by the road-side is softened by a white mint or a dull red dock. In mottled and streaked flowers there is enough combination already. They should be grouped entirely alone.

In our sphere of decoration colors cannot be mixed, but merely combined, so it behooves us to be careful. Since we cannot control the minute details it is better to employ not more than three distinct colors in one scheme.

Many tints and shades of one color may be used with beautiful effect, as a center piece composed of pansies ranging from purplish black, through reddish-purple and heliotrope pinks. Almost any one flower will reveal to the careful student many suggestions of unusual color combinations. Circumstances and surroundings must be among the first considerations. If a room is plainly and richly furnished it will admit of more elaborate coloring. But if, as is often the case, the apartment has an abundance of permanent decorations a severe simplicity must obtain in the florist's arrangements.

We must look into a flower for what we would place beside it. We must read its story before we would expand its influence. GERTRUDE BLAIR.

Convention of the S. A. F.

As the time approaches for our convention we hear the usual answer given by many to the question "Are you going to the convention?" "I think not; times are too hard; can't afford it." While with many we may be justified in saying that this is short-sighted economy, with others it is undoubtedly a sufficient reason for absenting themselves from the meeting.

But what shall we say for those who give as their reason for not attending that they are dissatisfied with the policy or management of the society? It is democratic in its system of government; it is just what its members choose to make it. If its policy or management has given any reason for discontent it is evident that the effective and proper place to remedy these shortcomings or mistakes is in the society itself. Let these members attend the meetings and assist in electing the officers and shaping the policy of the society so as to accomplish better results. If they fail to do so they cannot consistently or reasonably exercise the right of criticism. Anyone who can present any plan which will give additional interest or value to our meetings will be most welcome.

If the society is to grow and prosper you must attend the convention. If you have nothing to offer you can certainly see or hear something valuable to yourself, and your presence will be an encouragement to others. ADAM GRAHAM.

August 3, 1897.

The Mission of the National Society.

After perusing the attractive program and plan of meeting as outlined for the Providence convention I am impressed more than ever with the great benefits it is possible for the florist to derive from attending these annual meetings. To stay away is a sacrifice few of us can afford to make. The membership from the middle section of the country is entirely too small when we consider the vast horticultural interests located here and the number of progressive men engaged in the work.

I have often felt how inadequate our representation really is in the counsels of those best qualified to help each other. There is a vast amount of work that might be done in the line of unifying our varied interests. Individualism and old-fogyism are being gradually crowded out of the profession and men of broader and better views are rapidly taking their place.

The executive committee of the S. A. F. could do no better work than to adopt some means by which so many intelligent men could be brought together at least once a year for the mutual benefit of all. And the members of the society, wherever located, should not be backward in doing all that is in their power as loyal adherents of a good cause to help along the great and beneficent work. T.

Chicago to Providence.

The Chicago Florists' Club has made arrangements with the Pennsylvania railroad for transportation to Providence. Train will leave Union Station, Chicago, at 10:30 a. m., Sunday, August 15, reaching New York at 2:40 p. m., Monday. At New York the party will take the Providence line boat, leaving at 5:30 p. m., same day, and reaching Providence at 6 a. m. Tuesday morning. These boats leave New York from New Pier 36, North River, one block above Canal street.

This route will undoubtedly be very enjoyable. The Pennsylvania road is first-class in every respect and the ride over the Allegheny mountains affords views of some magnificent scenery. The boat ride from New York to Providence on the splendid Sound steamers is always attractive, but will be doubly so in this case, as there will be the company of the New York florists and undoubtedly those from other cities going by way of New York. A first-class orchestra supplies excellent music on these boats, and the supper on the boat will doubtless be a feature.

The fare from Chicago to Providence will be $23 going and $7 67 returning, a total of $30.67 for the round trip. A certificate must be secured when purchasing the ticket and this must be countersigned at Providence to be entitled to the special return fare. Sleeping car fare is $5 each way between Chicago and New York, for double berths accommodating two people.

Florists in the west and northwest are cordially invited to travel with the Chicago party. Berths can be reserved in advance by addressing G. L. Grant, 322 Dearborn street, Chicago.

New York.

PREPARATIONS FOR CONVENTION TRIP.—N. Y. CUT FLOWER CO. CHANGES ITS METHOD OF MARKETING FLOWERS.—BUSINESS DULL AND ASTERS TOO PLENTY.—CITY BUSINESS NOTES.—MR. M CORNAC OF PATERSON HAS A WIND FALL.

Returns to the secretary of the New York Florists' Club indicate that a very large attendance is assured for the Providence convention from this city and neighborhood. The transportation committee propose to make it pleasant for Providence-bound members of the S. A. F. passing through New York from other sections of the country on Monday, August 16th. The little badge of S. A. F. membership for 1897 will be the passport to a hearty welcome and good time on board the Providence boat.

The New York Cut Flower Company has adopted a new method of marketing cut flowers which will go into effect on August 15. The system will comprise the division of the salesroom into stalls in which each grower's product will be handled by his own salesman, the plan being similar to that in operation at the 34th street market, excepting that sales will pass through the company's hands, they guaranteeing all accounts and making collections, for which service a stated commission will be charged.

Flower trade continues very dull. Few flowers of desirable quality are being received but there are enough for all demands and some to spare. Asters are getting over abundant. Purple and

GROUP AT THE RECENT PICNIC OF THE INDIANAPOLIS FLORISTS' CLUB.

white are the only salable colors. Pink ones are not wanted at present. Some growers are grading their asters into extras, firsts and seconds. This must be for summer pastime as with sales slow at from $2 to $4 per hundred dozen, it doesn't pay to spend much time on grading.

W. H. Schusterman, who has been conducting a flower store on Avenue B and who had the misfortune to be burnt out last May, has now disposed of the establishment to his brother.

E. Leuly has returned from his trip with the Christian Endeavorers to San Francisco. He claims to be feeling better and evidently has designs upon the bowling trophies at Providence.

H. A. Hoffman's new wholesale flower store at 44 West 29th street is a model of neatness and convenience.

Mr. Fleischman sailed for Europe on Saturday, July 31.

It is reported that by the death of Mrs. H. E. Chitty of Paterson, E. M. McCornac, formerly clerk in Mr. Chitty's store, falls heir to the entire estate, valued at $150,000.

Philadelphia.

WEATHER —BUSINESS —PALMS AND BEAUTIES —CLUB OUTING —CLUB MEETING —DEPARTMENT STORES.—TO PROVIDENCE.

We felt sorry for the boys out west when their thermometer passed the hundred mark last week, while with us it was loafing about between 70° and 80°, but now things are different and we are sweltering a little ourselves with the mercury crawling up high into the nineties.

Business is about as usual for the time of year, a very few orders and a great hustle to get good stock enough to fill them.

Edwin Lonsdale has decided to make a change in the selling of his cut flowers. He has heretofore handled his product himself, sending a man to town and selling on orders, and from store to store. He has decided to try the commission plan and S. S. Pennock will handle his cut, principally American Beauties, the coming season. Mr. Pennock has worked up quite a trade in selected American Beauties, and by the way, the Philadelphia brand of this celebrated rose held its head up very proudly in exclusive circles the past winter. With first place for palms won hands down, first for Beauties by a foot (of stem), and running a dead heat in carnations, we begin to feel as if we aren't so slow after all, and that the field will have to hustle to catch up.

The summer outing (formerly picnic) of the Florists' club was held last Saturday afternoon at Wissinoming. About one hundred persons took part; three hundred would have been more like it, but for various reasons the multitude did not put in an appearance. However, those present were blessed with a fine day and all had a good time.

The shooting contest was first on the program. In this trial of skill George Anderson showed the boys what he could do by breaking every target shot at, winning first place in the match for 10 targets, 5 pair doubles, 5 at expert rules, and 15 in the team shoot, making 40 without a miss, a fine record. In the team shoot of 15 targets between teams captained by W. K. Harris and Thos. Cartledge, the Cartledge team won, making 65, to 59 by their opponents.

The baseball game between the growers and dealers was a very exciting affair. In order that there should be plenty of hitting Tommy Butler and Robert Kift occupied the pitcher's box for their respective teams. Tommy was touched up rather lively. His experience had been rather as a bowler at the wickets, and after he had been knocked out of the box, so to speak, his place was taken by Isaac Kennedy. Big Ike is all right for looks, but his delivery had no terrors for the dealers, and home runs and base hits were as plentiful as the clover blossoms in the diamond. Sammy Pennock sent out two long hits which were not recovered until he had crossed the plate. Robert Kift kept the heavy hitting growers down until the third inning, when he gave way to Milton Woodruff, who soon retired the side.

Three innings were enough for the growers, who were defeated by the score of 10 to 12. It makes all the difference in the world whether you are a spectator or a participant in a game of baseball, that is, the next day.

The sack race, a very amusing event, was won by A. L. Plush. George Moss gave him a hard tussle, but Mr. Plush just managed to win out.

Addleberger, of Wayne, won the blindfold wheelbarrow push, for the gentlemen, the objective point being a watering can, and of course, he being a grower, to find the can was easy. Nearly all the ladies tried their hand at the same game, and Mrs. Magee coming within a few inches, the nearest, carried off the prize. The potato race was won by J. Etchingham.

An orchestra discoursed sweet music all afternoon and evening on the porch of the club house. Late in the day a substantial lunch was served, after which the prizes were presented to the winners. The outing was ended about 9 p. m. and all present declared they had had a good time and that there should be more of such festive occasions.

The August meeting of the Florists' Club was well attended, some forty members being present. Two associate and one active member were elected. Convention matters were discussed. It was decided to go by way of Penna. railroad to New York and then by boat in the company of the New York Florists' Club, who have generously invited the members to partake of their hospitality on this occasion.

The H. A. Dreer Co. extended an invitation to the club to the third annual reception to be given to the florists and gardeners of Philadelphia and vicinity at their nurseries on August 31. This was received with thanks and will no doubt prove to be a very enjoyable occasion.

A communication was received from the National Flower Society Council, an organization having for its purpose the selection of a national flower. The secretary's address is E. A. Taylor, Biltmore, N. C. It is proposed to hold a convention in this city the coming summer to settle this mooted question. The communication was laid on the table.

In the department store discussion that followed, Mr. Harris said that he thought it good policy as a business man to sell to anyone who would pay him his price and in Mr. Wanamaker he had found a good customer and he would sell him all he wanted. He believed that he had an outlet that the regular trade did not reach and that their business would not be materially affected by such competition. Mr. Eaton said that bureaus

of information should be established so as to relieve the retail trade of the strain caused by prescribing for the sick plants bought at the department stores.

Mr. Farson made the hit of the evening when he said that at the last meeting a member had stated that a grower had sold a lot of plants to Wanamaker at half price because they were diseased. He thought it was a sin to take in a man or firm in this manner, and he hoped that if the grower was present he would stand up and explain himself. His remarks caused great merriment which turned to a great shout as Deacon Harris slowly rose in his place to explain. He said he never took anybody in in his life. The plants spoken of were white Pandanus Veitchii and he offered them to Wanamaker's buyer at the same figure as to everybody else, half the regular price of healthy stock. The man seemed pleased to get them at the figure and he was more than pleased to see them go.

Those who intend going to the convention from this neighborhood should communicate with John Westcott, chairman of transportation committee, at once and he will secure berths on the boat which may not be had if left to the last moment.

St. Louis.

NO CHANGE IN BUSINESS—DIFFICULT TO QUOTE PRICES.—CLUB ELECTION AUGUST 12.—NEWS FROM ABROAD.—MR. WEBER'S NEW STORE.—BOWLING.

We have the same old story to tell: Weather hot, good flowers scarce and business dull. A few large funeral orders were reported last week but outside of that nothing is going on.

It is hard to quote prices from day to day, and there is little change since last week. Some few excellent roses are to be seen but the prevailing quality is indifferent. A few good Beauties came in last week, also Perles but most roses are small even when the color is good. Carnations are a little scarce now and the few coming in are very poor.

Asters are quite plentiful. The most salable colors are white and pink; the darker colors are not liked and most of them find their way to the dump pile. Sweet peas are falling off and many are evidently coming to the end of the crop. Gladiolus, hardy hydrangeas and auratum lilies are coming in freely. Dahlias continue to come in and the bulk of the material is from outside. Smilax is very good and plenty of it but very little sale for it.

The club meeting next Thursday promises to be a lively one. There has been a good deal of quiet electioneering going on and the fight for the presidency will be a hot one. Every member of the club is requested to be present at this meeting as the successful candidate promises to make it pleasant for the members after the meeting, so if you want to have a good time don't fail to attend this meeting, August 12, at 3 p.m.

From letters received from Wm. Young and Julius Konig, Sr., who are abroad we learn that they are having a very pleasant time and will have lots of good news to report when they arrive home in September. Mr. Young is in England and Mr. Konig is in Germany.

Mr. Fred. C. Weber will move into his new store August 15. Mr. Weber will have one of the finest floral establishments in the west.

Mr. Fred. Foster, of Milwaukee, was a visitor last week. Fred reports that he sold out his business and expects to locate here if he can find a suitable place in the west end.

Talk about bowling at white heat, with the thermometer up to 98°. The bowling club bowled three games and all the regular members were in attendance except one. The bowling was not very good as the members complained of the heat. The first game the captains were E. Schray and C. Beyer, the second by Beyer and Kuehn, and the third by Schray and Helwig. Kunz came out on top in the three games rolled with 509, and Kuehn second with 499. The highest single score was Helwig, 189. Next Monday night we are promised cooler weather.

Buffalo.

THE QUIETEST WEEK.—TRADE AT THE MARKET.—CLUB PICNIC AUGUST 13.—VACATION TRIPS.

Of all quiet weeks perhaps the one just past takes the record, but as very little is expected we are not grumbling. A visit to our Washington Market on Saturday evening showed us that there is where the summer flower business is done. The bouquets may be cheap and the cut flowers at very popular prices but a large quantity changes hands. I can remember that 20 years ago to offer either flowers or plants on the market after the first of July was a waste of time but now it is an all the year round place, which shows how the taste for flowers has spread, and if we don't do the business at the stores it's will to know it is done somewhere.

A committee of the Florists' Club has made arrangements for holding the annual picnic on Friday, the 13th of this month. Two years ago it was a most successful and enjoyable affair, last year it was only so so, principally on account of the place it was held. It is remarkable what a gathering these picnics bring out. The sisters and sweethearts make their appearance in large numbers and it needs a committee to introduce strange members to each other, so seldom do we meet.

Several of our Main street florists have been picnicing on their own account. Mr. S. A. Anderson, accompanied by some of his family, has lately returned from a trip

GROUP AT THE PICNIC OF THE ST. LOUIS FLORISTS' CLUB.

to New York and New England. Mr. W. A. Adams is on a large propeller and has made the round trip to Duluth. Mr. Wm. J. Palmer, Jr., is at Lancaster helping to erect some fine rose houses.

We are to lose Mr. Dennis O'Connell on September 1. He accepts a lucrative position in Kansas City in some railroad office. I don't think it is president of the road he is to be but something near it, perhaps auditor. I should be glad to give a list of intending visitors to Providence but cannot. I hope for a good attendance from here. W. S.

Boston.

A BIG DELEGATION WILL GO TO PROVIDENCE.—PRESIDENTIAL CANDIDATES APPEARING.—NO BOWLING TEAM YET.—FUNERAL TRADE THE ONLY BUSINESS NOW.—HORTICULTURAL EXHIBITION.—A CERTIFICATE TO CYPRIPEDIUM CORNINGII.—TOURISTS RETURN.—F. L. HARRIS PROSTRATED BY THE HEAT.

Interest in the approaching convention at Providence is quite general in this neighborhood and it is evident that the accessions to membership in the national society will be large. Providence is easy of access, being but an hour's ride from Boston and the railroad fare is only a trifle. Talk of presidential candidates is rife. From present rumors it is probable that New England will show up with several candidates for that high office. It is to be regretted that nothing has been done towards organizing a bowling team to represent Boston at the contest in Providence. Possibly the boys are relying upon getting together a winning team by chance selection but that is not the way trophies are won generally.

Business is quiet at present, the only activity noticed being in funeral work of which there has been a good run during the past week, several persons of prominence having died. Roses are very small and inferior. The best white rose at this season seems to be Kaiserin Augusta Victoria but there are not as many of this variety grown for this market as its merits warrant. Asters are now the main stay of the florist who has designs to make and the street fakir, even, seems inclined to retire the carnation in favor of the aster for the time being. There is an abundance of fine white candytuft in the market and a few growers are in with early tuberoses.

On Saturday, July 31, prizes were offered at Horticultural Hall for perennial phloxes and antirrhinums. Neither were shown in first-class form owing to the heavy rains and otherwise unfavorable weather of the preceding week. Wm. Thatcher, Rea Bros., and Geo. Hollis were the principal exhibitors of phloxes, and John Jeffries and Carl Blomberg in antirrhinums. Wm. Thatcher received honorable mention for a handsome Delphinium hybridum seedling. Three large plants of Hydrangea cyanoclada Hortensia from M. H. Walsh were much admired. J. E. Rothwell showed a group of rare orchids among which was the beautiful Cypripedium Corningii which won for him a certificate of merit. The collections of native flowers were large and interesting. The first show of gladioluses came from J. Warren Clark.

Geo. A. Sutherland has returned from his vacation "down-east" with face sun burnt and as round as the full moon. E. J. Welch has also turned up in equally good form, the radiance of his ruddy complexion making the electric lights in the City Hall Flower Market superfluous.

F. L. Harris was prostrated by the heat one day during the hot spell two weeks ago. In falling he struck his head and had a very narrow escape from serious injury. His many friends will be glad to know that he has now nearly recovered.

Pittsburg.

BUSINESS STILL STAGNANT.—FIRE DESTROYS THE DWELLING OF MR. J. F. GIBBS.—VACATIONS IN ORDER.—CLUB MEETING.—TRIP TO PROVIDENCE.—VISITORS.

The florists of this vicinity while complaining somewhat of the dullness or rather stagnation of trade are taking things philosophically and accepting the advantages of the opportunity afforded of having a vacation without worry over business affairs. A good many will go to the S. A. F. convention, while others will go for recreation nearer home, fishing and hunting and getting into good condition for the fall business.

Mr. J. F. Gibbs, of Woodville, met with a very great misfortune on Sunday night, August 1. About 11 o'clock he was awakened and found his dwelling on fire; it had broken out in the kitchen, an annex to the main building, and had gained such headway that when the door opening into it was opened they could not get it shut, and the pump was in the kitchen, so no water was to be had; the fire spread with such rapidity that the family barely escaped with what clothing they had put on at the alarm. All the household goods were destroyed and nothing but the bare brick walls of the house were left standing. No one was hurt, all getting out safely. Mrs. Gibbs was not at home at the time, having gone out to their new place in the East End of Pittsburg, recently purchased from Mr. Drewes. Mr. Gibbs estimates his loss at fully $1,500 over the insurance and expects to rebuild without delay. Their many friends sympathize with them in their trouble and expressions of regret are heard from all brother florists.

Mr. Lincoln I. Neff, of 218 Sixth street and 4010 Butler street, has gone to Atlantic City for a two weeks' sojourn with his wife and family of three children.

Mr. Chas. E. Camp, who is with E. C. Ludwig, has also gone to Atlantic City for an outing. From letters received he must be having a royal good time and will be quite a "salt" by the time he comes home.

Mr. Henry Ludwig, with Gustave Ludwig, has returned from camp looking and feeling very well. His brothers are going to the S. A. F. convention this year instead of camping out on the Lake Shore.

Mr. Wm. Faber, a member of the Florists' Club, and with W. C. Beckert, seedsman, lost his father by death on Tuesday morning. Mr. Faber died from a complication of diseases and leaves a family of two daughters and three sons,

the mother having died some time ago.

Miss Mary Britenbaugh, who assists at the stand of Langhans & Co., Allegheny Market (Mr. F. Britenbaugh is the Co.) is at home sick with typhoid fever. Her friends all wish her a speedy recovery.

The Florists' Club held a special meeting on the 5th inst. to close arrangements for attending the S. A. F. convention. Those who go expect to leave on the 12th inst.

Mr. T. P. Langhans is home from Somerset county looking well and hearty. He brought home a series of photo views taken by himself and which reflect great credit on him as an artist in that line.

Mr. Wedenroth, with Mr. Nicholas Wappler, was with us this week, also Mr. A. M. Stewart, representing Mr. John Krauss, of New York. Mr. S. says trade is picking up again now that the tariff question is settled. It has made at least 15% difference in their line of goods.

REGIA.

Chicago.

CLUB'S VISIT TO PARK RIDGE.—ROUTE TO PROVIDENCE.—NEWS OF THE PARKS.—MARKET CONDITIONS.—VISITORS.

The weather was again favorable for the Florists' Club last Sunday and the visit to Mr. E. Buettner's place at Park Ridge was much enjoyed. Mr. Buettner has 12 acres of land and 70,000 feet of glass, all in the best of order. His Beauties are in the pink of condition, as in fact is everything on the place. He has this year increased the space devoted to Beauty and cut down that devoted to Meteor. Not only is the call for Beauty greater, but the soil here seems better adapted to the Beauty than other roses. The soil is mostly humus produced through the rank growth of prairie grass which for ages has annually been burned over or decayed in natural course. This is slightly mixed with the clay subsoil. There seems to be rather more clay in his soil than at some other points around the city. He believes that Beauty likes a lighter soil than most other roses, and certainly the Beauties produced by Mr. Buettner cannot be excelled anywhere in the country. Meteor he finds rather disposed to mildew and when attacked by this fungus it is very difficult to combat, more so than on any other rose he grows. This is his main reason for cutting down the space devoted to this rose. He is giving Belle Siebrecht another trial, using carried over plants, believing that this rose will produce better from such plants than younger ones. He is trying only 300 plants as an experiment. He has discarded Testout. While the buds were good and always salable he found it did not bloom freely enough to be profitable. His early chrysanthemums are now about two feet high and in splendid condition.

In carnations the only new ones he is trying are Jubilee, Flora Hill and Harrison's white. He has considerable faith in the last named on account of its parentage. The plants in the field are all looking well. It is understood, though, that Jubilee does not move well, and Mr. Johnson, foreman for W. N. Rudd, said that they were growing all their carnations inside this summer, and had nothing planted out except a few seedlings. They plant in benches in May. Mr. Buettner thought he could not afford to grow carnations in that way as he would then lose the late spring cut from houses of previous season's planting.

Mr. Buettner uses soil from his own land altogether, arranging it so that each section has several years in which to recuperate, during which period it is planted to some strong growing grass which is turned under to enrich the soil.

After the visitors had inspected the houses and fields they gathered on the lawn where a temporary shelter had been erected for the occasion, and were given an excellent lunch with abundant liquid accompaniment, and Messrs. McKellar, Winterson and Kissell entertained all with excellent vocal music. There was no baseball this time and it was somewhat humorous to see some of the baseball heavy weights engaged in the mild game of croquet. The afternoon passed very pleasantly and all enjoyed themselves thoroughly. A unanimous vote of thanks to Mr. Buettner for his generous hospitality was passed and at time of leaving he was given three hearty cheers.

The next trip will be to the establishment of Messrs. Bassett & Washburn at Hinsdale, some time the latter part of August, date not yet decided.

Notice of arrangements for transportation from Chicago to the Providence convention of the Society of American Florists will be found elsewhere in this issue under the heading 'Chicago to Providence." This will be a most delightful trip, and all who can possibly do so should avail themselves of the opportunity to visit the seashore under such favorable circumstances, to say nothing of the attractions of the convention itself.

Mr. M. Stauch has taken the position of manager of the greenhouses of the Art Floral Co. at Blue Island.

Mr. Kanst is moving the plants into the handsome and commodious new conservatory at Washington Park.

Mr. Stromback expects to extend the herbaceous garden in Lincoln Park to Fullerton avenue the coming season.

The Lincoln Park Board offers $150 in prizes for the best plans for the new Chicago Avenue Park, which will be on 15 acres of the made land east of the Chicago avenue pumping station. Work will begin September 1 on the Ohio street extension of the Lake shore drive.

Business is looking up a trifle, there being a perceptible increase in the demand for cut flowers. Roses are beginning to come in a little better, good teas bringing up to $3, though there are more going at $1. Beauties sell very readily but the price obtained is somewhat low, $15.00 per hundred being asked for the best.

Most of the carnations coming to this market are poor in quality, although there are a few good ones, including Lizzie Gilbert, Portia and Scott, the latter readily bringing 75 cents per hundred. Other stock can be bought as low as $5 per hundred bunches.

Smilax was somewhat scarce the past week, all that came in the market finding ready customers; price ranging from $8 to $10. Sweet peas are beginning to shorten up while the demand is not brisk the supply is also short. Gladioli have been coming into the market in large quantities from the central part of the state. There is not a very great call for this article and quantities of it are left on the commission men's hands.

Visitors in town: Mr. Humfeld of the Muncie Floral Co., Muncie, Ind; U. J. Virgin, New Orleans; H. A. Bunyard, representing Pitcher & Manda.

The New York Gardener's Society.

A special meeting of the New York Gardeners' Society was held in their rooms on Saturday, July 24th, for the purpose of distributing the prizes won at their exhibition in the City Hall in June. The president, Mr. John Shore, in handing the the winners the several valuable cups and money prizes, accompanied them with suitable remarks which were responded to by the recipients.

A discussion followed on the advisability of holding a canna show next month, and it was finally resolved that an exhibition of cannas and other flowers be given in connection with the Society's first annual dinner, which will be held on the second Saturday in September, and to which the presidents of all neighboring Florists' and Gardeners' Clubs will be invited. It was also decided to hold a chrysanthemum show in November and a committee was appointed to make arrangements accordingly.

On the exhibition table were some very fine seedling cannas raised by A. L. Marshall, of Powling, N. Y., one of which, a large deep crimson flower named John B. Dutcher, which is an improvement on Chas. Henderson, was awarded the Society's certificate. Messrs. John M. Hunter and A. Welsing also made displays of new and standard varieties of cannas. The latter showed a vase of asters which were much admired. A certificate of merit was awarded Mr. Ferdinand Mangold for a new cypripedium.

The next meeting of the Society will be held on the occasion of the dinner in September 11, which will be a great event amongst the gardeners of this section.

JAS. I. DONLAN.

Providence, R. I.

A HAIL STORM.—MUCH RAIN.—BUSINESS DRAGS.—ENTERTAINMENT FOR CONVENTION VISITORS.

A genuine hail storm visited the city on Saturday last, that lasted several minutes. Fears were expressed by many that a great amount of damage would be done. Fortunately we escaped any serious results. In some places foliage was badly punctured and a small amount of glass broken.

Too much rain of late has injured stock plants of carnations in the field where the location was low and soil heavy.

Business drags along and outside of funeral work there is nothing to stimulate the florists save the coming convention. The fever is raging above the normal and every one is getting into line with a determination to make this one of the most enjoyable conventions ever held by the society.

Through the courtesy of Mr. E. J. Johnston, the spacious grounds about the homestead will be one of the objective points. On the way to Swan Point cemetery the party of ladies with their escorts will tarry at Mr. Johnston's where refreshments will be served by the club and the hospitality extended to the visitors.

The ride to Roger Williams' Park and a small million other side excursions will enable the visitors to get a good idea of Providence as we find it.

Roses and good material for funeral work has been scarce for some time past. Asters are a little tardy this year and the rain has spoiled out of door flowers.

Don't forget the dates 17, 18, 19, 20.

The souvenir program which the local club will present to convention visitors is nearing completion and will be very handsome and creditable to the club and to Mr. H. C. Aylesworth, who is getting it out. Mr. Aylesworth's address is 97 Dyar street, and he says he has a few more eligible spaces left for wise advertisers.

LITTLE RHODY.

Baltimore.

CLUB MEETING.—TRADE CONTINUES DULL.—DEATH OF WILLIAM FOWLER.

At the last meeting of the club the vice-president of the S. A. F. for Maryland was by resolution requested to use his vote and influence at Providence to bring about the affiliation of the various clubs with the national society.

There was quite an interesting show of cannas at the meeting, including an exhibit from Mr. Robert Craig, of Philadelphia. Undoubtedly the canna is taking a front rank for bloom as well as foliage, and if it is improved in size much further it is to be hoped it will be improved in substance as well, for the worst fault it has now is its flabby and transient character.

Trade in general continues dull. Roses are scarce; one might almost say good ones are unobtainable, and the bulk of the dealing is in flowers suitable for funeral work.

Mr. William Fowler, who was gardener for Mr. Johns Hopkins and after Mr. Hopkins' death gardener on the estate, in all forty years, died on July 23 at the advanced age of seventy-five years.

He was born at Kelvin Grove, near Glasgow, Scotland, December 24, 1822. He served his apprenticeship at the Royal Botanical Gardens, Glasgow, and went from there to Kew Gardens, London, from whence he came to America in 1849 and settled in Virginia. He had, however, left such an admirable record at Kew that the British government sought his services in botanical work in Australia, where he served three and a half years.

After his return from Australia he engaged with Mr. Hopkins and for the ensuing forty years never changed his situation. In fact but for the estate having been purchased by the city to form Clifton Park he would have been occupying the same house at his death.

Mr. Fowler was one of the most remarkably unassuming and unpretentious men in his business. His knowledge of plants was astonishingly extensive and yet few even of his acquaintances had any idea of his abilities, owing to his reserve and modest appreciation of his own worth. He was with all an exemplary christian, and for over twenty-five years an elder in Aisquith street Presbyterian church.

Clifton, as the Hopkins home place was called, was his pride, and the many magnificent specimen trees and shrubs now adorning the city's most beautiful park were selected, placed and developed into their present beauty by the loving care of Wm. Fowler.

The place has been noted for many years for the indoor grapes and other fine fruit produced, especially the figs, which were grown in great quantity, with unvarying excellence and undeviating success.

In all we may say we have sustained a loss, in him, of another old school gardener, whose place will probably never be filled. MACK.

NASHUA, N. H.—The mother of Judge C. W. Hoitt died Wednesday, August 4. Judge Hoitt will have the sympathy of his many friends in the trade.

COHOCTON, N. Y.—The Presbyterian Church held its second annual sweet pea exhibition August 5 and 6. There was quite a lengthy list of prizes. Grove P. Rawson, of Elmira, was judge, and he also delivered a lecture on "Plant life" to an appreciative audience.

FORT DODGE, IA.—P. L. Larson has bought the fixtures and stock and leased the greenhouses of the Fort Dodge Greenhouse and Nursery Co., (John Kellenberger) and will continue the business. Mr. Larson has been foreman for J. C. Rennison, Sioux City, Ia., for the last four years. Mr. Kellenberger has accumulated considerable property which he intends now to enjoy.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By all round florist; near Chicago; German; 15 years experience. Address E L, care American Florist, Chicago.

Pea Reports.

First correspondent: N. Y. State, half the crop rotting and sprouted. Eastern Michigan, yield half crop. Port Hope vicinity, yield one-third, acreage one-half. Northern Michigan, crop one-half, acreage one-half.

Second correspondent: Canada, acreage one-half, crop prospects not over half usual. Peas sprouting account rain and heat, damage hard to estimate yet.

Third correspondent: New York. Peas under size and generally a poor sample, the early crops fairly good as to quantity, anticipate medium and late quite short; account hot weather peas undersized. Late sown late sorts doing better but shortened acreage will reduce total crop.

Fourth correspondent: Canada, much rain last week in July. Vines cut and suffering in field, some fields so flooded can't turn vines.

OSCAR H. WILL & Co., of Bismarck, N. D., and Fayetteville, N. Y., have sold their Fayetteville branch to Mr. F. H. Ebeling, of Syracuse, who has removed the same to that city. Mr. Will expects to return to the northwest soon.

VISITING NEW YORK: C. P. Braslan of Chicago.

Toronto.

THE CRICKET MATCH.—UNFAVORABLE WEATHER.—HORT. SOCIETY MEETING.

The weather on Wednesday last was not propitious nor was it conducive to first rate cricket. Old probs said that it would clear up in the afternoon and Harry Dale with twenty-five of his staff arrived on the grounds (Exhibition Park) about 12:30 p. m. After every one, including about thirty members of the local Association, had stowed away a good square meal, play was commenced but the aforesaid old probs having been on a bender the day before forgot all about his promise and treated us to various kinds of Scotch mists and "cunning little rains". However, play went on merrily although the crease, which in ordinary times is as good as any in the city, was very muddy and greasy. Brampton went to the wicket first and were all put out for 43 runs, then Toronto went in and managed to pile up 47, more than half of which were made by Tom Manton, who displayed a most astonishing and unexpected capacity for driving the ball all over the field. It is hard to say how matters would have gone if the weather and the grounds had been in good order, but another match will be in order before the season closes. There is lots of fun and sociability in these meetings anyway.

The Horticultural Society holds its "Sweet Pea" meeting to-night and Mr. E. Utley will hold forth on the subject, no doubt to the edification of all present. A large audience is expected. The present place of meeting will soon be too small for these gatherings. E.

IF YOU have anything to sell to florists you should not fail to offer it in our Convention Number to be issued next week. But send adv. at once or you may be too late.

VAUGHAN'S INTERNATIONAL PANSY MIXTURE. This is the Pansy mixture for every Florist who would realize the highest prices for his flowers and plants. It contains the cream of the cream of every noted Pansy growers' product the whole world over. It contains besides all the choicest German Pansies in their wide range of beautiful colorings, all the separate colors of the Giant Trimardeaus with their immense flowers and rich colors. It contains the Giant Cassier and Bugnot strains, the product of celebrated Scotch strains, the Falaise and Boulogne Giants, in fact there is no strain of any of the celebrated Pansy Specialists not represented in our INTERNATIONAL MIXTURE. Price, per oz $10.00; ¼ oz. $3.00; ⅛ oz. $1.50; trade pkt. 50c. (Less 10 per cent. for cash). $6.00 per oz.; $3.00 per ½ oz.; $1.75 per ¼ oz. White, yellow and black, in separate colors, $1.00 per pkt. Plants ready September 15th.

Vaughan's "GIANT PANSY MIXTURE." Embraces besides all the above shades and colors, two special strains not listed elsewhere, and which can only be had in this and our International Pansy. This mixture includes the richest reds, coppers and bronzes together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain with its delicate veinings. We have spared no expense to secure the newest, richest and finest sorts. Price, oz., $5.00; ¼ oz. $1.35; ⅛ oz. 75c; pkt. 50c.

Cincinnati.

BUSINESS ABOVE SUMMER AVERAGE.—CRITCHELL'S NEW STORE.—VISITORS.—BUILDING AND REMODELING.—BOWLING.—TO PROVIDENCE.

During the past week business was somewhat above the usual summer average in some of the Fourth street stores on account of funeral orders, although this was not general throughout the city. Tea roses are selling at from $2 to $3, Valley $3 to $4. There has been a fair demand for smilax all summer. Some good asters are coming in now in large quantities and sell at 50 to 75 cents per 100.

Critchell's Sons are now doing business in their new store located at 110 E. Fourth street. Mr. B. P. Critchell is very proud of its appearance and justly so, for it is one of the finest stores in the city. Mr. Critchell is the oldest florist on Fourth street, having conducted business on this popular street since '68.

Mr. Walter Mott, representing H. A. Dreer, was a caller last week. The boys are always glad to see him.

Mr. Julius Schuman, of Newport, has been very busy all summer and is still hard at work getting up a stock of ferns to supply the wholesale trade of this vicinity. He is building a house 18x80 and has it well under way for this stock this fall.

Gus Adrian, of Clifton, has also added one house 18x100 for roses, and made some other alterations about the place.

A visit to the Cambridge Tile and Pot Mfg. Co., at Covington, a few days since, found this firm hard at work and busy filling orders. Their tile works have a world wide reputation. Several large orders are being shipped at present to 'Frisco, California. This firm has also worked up a very fine business in their pottery during the past year, and, judging from the stock on hand, they will unquestionably do well this coming season.

The winning team of the bowling contest at Coney Island are now challenging any team of five, to be connected with the florist business, for a match game in the near future. The first lot of Roman hyacinths arrived here last week for George and Allen.

Who is going to Providence? is an every-day question asked. Those wishing to go should correspond with Mr. Giesy, of the Lockland Lumber Co. It is to be hoped that Cincinnati will be well represented. H. SCHWARZ.

THE long looked for improvement in business seems actually at hand, and indications are favorable for an excellent fall trade. Among recent "straws" is Mr. Harry Bunyard's report of his recent trip through the west and northwest. He says: "Florists are buying very freely, and during my recent trip I sold more goods than I have ever before sold during the same length of time."

THIS is last call for advs. for our Convention Number to be issued next week. Copy must reach us by August 11 to be in time.

LAST CALL FOR ADVS.
FOR OUR
CONVENTION NUMBER....

Copy must reach us by the morning of August 11 to be in time.

PALMS.

Owing to our stock being grown with plenty of air the plants are all strong and sturdy, and will bear transportation for long distances. Florists intending to purchase this class of stock for their fall trade will do well to place their orders immediately, so that they can have them shipped by freight, thus avoiding the excessive express charges which they would have to pay if shipped during the cold weather. The prices will also be very much higher in the fall than at the present time, owing to the high duty which will then be in force.

ARECA LUTESCENS.

BUSINESS DULL.—FLOWERS NOT PLENTIFUL BUT SUFFICIENT FOR DEMAND.—THE PICNIC —A FLORIST TO RETIRE.

Business has been reported dull everywhere lately, there being nothing doing save some funeral work occasionally.

Flowers are not very plentiful, though amply sufficient for the business doing in most cases. Sweet peas have not done very well this year with many growers. The hot dry weather when they first began to bloom, shortened the stems very early and later rains so far seem to only have affected the texture of the flowers unfavorably without helping them appreciably in other ways. Asters are blooming both inside the greenhouses and outdoors. They are of fairly good quality.

The florists held their picnic July 28, at Concordia Park, about a hundred being in attendance. The day was very pleasantly spent playing quoits, bowling, with other amusements, to say nothing of satisfactory attentions to the wants of man's internal organization.

P. N. Soetga has announced his intention to sell out his establishment on Cedar avenue and retire from business.

A.

Allentown, Pa.

"Old Sol" seems to be doing it with a vengeance; the streets are deserted and business is practically at a standstill. Notwithstanding the unfavorable present conditions the outlook is decidedly encouraging, all indications pointing to a revival of business prosperity. The general activity noticeable in all industrial branches for the past week or two is by no means lacking with the florists. Improvements of one kind or another seem to be the order of the day, and everybody is apparently getting ready for the coming harvest.

Mr. John F. Horn, successor to Kratz, Shelly & Co., contemplates remodeling his plant located at Rittersville, on the Allentown and Bethlehem road. Ventilating apparatus of the best kind will be introduced in all the houses, besides many other improvements. With the addition of two houses, which Mr. Horn contemplates building, he will have a total of 15,000 feet of glass. His houses will be especially adapted for roses, carnations and chrysanthemums, and of these he will grow none but the best varieties extant.

Mr. A. B. Elsworth is enjoying an outing at the seashore.

HOMO.

Wilkes-Barre, Pa.

Mr. I. G. Marvin has in course of erection three additional houses, each 100x18.

Mr. Marvin's second floral store on Market street is a model, the like of which it would be hard to point out in any other city. The ceiling and walls are lined with the finest French plate looking glasses, the floor is tiled and the counter —a most elaborate affair—is of the finest Italian marble, the sides being tiled. This store needs to be seen to get some adequate idea of its general attractiveness. A dozen or more incandescent lamps imbedded in the ceiling furnish "brilliant illumination."

Mr. Wm. Humphrey, of Eldridge & Co., has returned from a week's trip to New York City. Mr. Humphrey's young roses and chrysanthemums are doing well and from all appearances he will be well prepared to meet all demands for cut flowers.

Orcas, Wash.

We are having a lovely summer and crop conditions all over the state are very good. Bulb growing here is a marked success. The per cent. of bloom from Orcas 5th generation is higher than any imported from Holland last season, have grown tulips measuring 8½ inches in circumference, hyacinths measuring 9 inches around them and each had five blooms from one planted last fall. These were Orcus bulbs. Had dozens of yellow crocus with 20 blooms from one planted last fall.

Have just cut my experimental patch of Dwarf Essex Rape seed from seed drilled in June 1, 1896. This seed is also a success in the mild winters of West Washington. These plants had from 50 to 100 leaves on in November last two feet long, and the seed stalks were 8 feet high in bloom. Commenced to bloom April 15 last and ripe July 17. Seed very fine quality and large yield.

GEO. GIBBS.

Size of Boiler.

We have a chance to buy a 45-horse power boiler and stack very cheap but we will need only a 25-horse power. As we will have to buy a new boiler any way will it be economy to buy the larger one? We have only 5 000 feet of glass and coal costs us $1.50 per ton.

SUBSCRIBER.

The above is referred to me and while I don't assume to know as much about heating with steam as I do with hot water, my answer would be by all means purchase the 45-horse power boiler, for the following reasons. If you are going to get it very cheap it will cost you probably less than a new 25-horse power. Then again there is nothing like having some reserve power in extreme cold weather. You will in all likelihood increase your glass in the near future and you will have boiler power enough for double the size of present establishment. Your coal is so low in price that you can afford to use up a few more tons than you would with a smaller boiler and in cold weather you will use up no more. For all of the above reasons I strongly advise the purchase of the large boiler.

Butted Glass.
This is no longer an experiment, it has come to stay. There are various ways of making Butted Roofs, but the best way is with the
Clipper Bar.
With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

boiler=value

There are many ways in which Steam and Hot Water Heaters may be cheapened without showing, to the unclothed eye, how it was done. We don't try to cheapen the boiler at the expense of the boiler itself. We couldn't afford to lose the good will of a single one of our boiler-users, or to disturb our own peace of mind. We try to make a man's boiler money buy more boiler value in our boilers than it can buy in any others.

The Thirteenth Annual Meeting

— OF THE —

SOCIETY OF AMERICAN FLORISTS

— WILL BE HELD AT —

PROVIDENCE, R. I.,

AUGUST 17, 18, 19 & 20, 1897.

Members may remit the annual dues ($3.00) to the secretary prior to the meeting thus avoiding the crowd and relieving the officers on the opening day. Badge for 1897 will be sent by mail to those who remit in advance of the meeting.

Intending members can obtain any information wanted by addressing the secretary.

OFFICERS:

ADAM GRAHAM, Cleveland, Ohio, president; FARQUHAR MACRAE, Providence, R. I., vice-president; W. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; H. B. BEATTY, Oil City, Pa., treasurer.

The Old Stone Mill of Newport.

The oldest building in the New World built by people of the Old World is the so-called "Old Stone Mill of Newport." Its history is still, and probably ever will be, shrouded in mystery. We know today more about what it is not than what it is.

In a popular and well edited history of the world by an American author, published as late as 1885, I am surprised to find the fallacious theory that the old edifice is a relic of the Norsemen directly implied in the text. That is a great mistake; we may be quite sure that the old Northern Sea Kings never saw the old mill, nor had anything to do with it. The best historical authorities conclude that it belongs to a much later period than that of Norse discoveries, and the Danes claim that it is the work of their ancestors.

But it has never been conclusively demonstrated for what purpose the building was erected; once it served for a mill, and once as a storehouse for hay; but what its original use was remains as much of a mystery as its subsequent

THE OLD STONE MILL AT NEWPORT.

history. The poet Longfellow has woven about the old tower the romance of an old Viking lover; in his "Skeleton In Armor" he makes the Viking say:

> Three weeks we westward bore,
> And when the storm was o'er,
> Cloudlike we saw the shore
> Stretching to leeward;
>
> There for my lady's bower
> Built I the lofty tower,
> Which, to this very hour,
> Stands looking seaward.

But the testimony of poetry is one thing and that of "cold and calculating" history is quite another; and although Palfrey's *History of New England* and Mason's *Reminiscences of Newport*, both written many years ago, sustain the foundationless theory that the old tower was built by the Norsemen, the later historians ridicule the idea.

Professor Rafn in *Mémoires de la Société Royale des Antiquaires du Nord*, for 1839, says: "On the ancient structure in Newport there are no ornaments remaining which might possibly serve to guide us in assigning the probable date of its erection. That no vestige whatever is found of the pointed arch, nor any approximation to it, is indicative of an earlier rather than a later period. From such characteristics as remain, however, we can scarcely form any other inference than one, in which I am persuaded that all who are familiar with old northern architecture will concur, that this building was erected at a period decidedly *not later than the twelfth century*. This remark applies, of course, to the original building only, and not to the alterations that it subsequently received; for there are several such alterations in the upper part of the building which can not be mistaken, and which were most likely occasioned by its being adapted in modern times to various uses; to these times may be referred the windows, fireplace, and

apertures made above the columns. That this building could not have been erected for a windmill is what any architect will easily discern."

It is of course perfectly evident that the round arch style of architecture in the old building connects itself unmistakably with what is designated as Saxon or Norman architecture, which was in vogue as late as the twelfth century. A moment of comparison between the splendid round arches and massive pillars of Durham Cathedral and the arches and pillars of the "old mill" reveals, if I may be allowed to use the expression, a striking family resemblance. There can be no doubt whatever that the old building antedates the discoveries of Columbus.

John Fiske says, in his *Discovery of America*, "Ingenious antiquarians have now and then tried to prove more than facts will warrant. * * * And when it was attempted, some sixty years ago, to prove that Governor Arnold's old stone windmill at Newport was a tower built by the Northmen no wonder if the exposure of this rather laughable notion should have led many people to suppose that the story of Leif and Thorfinn had thereby been deprived of some part of its support. But the story never rested upon any such evidence, and does not call for evidence of such sort. There is nothing in the story to indicate that the Northmen ever founded a colony in Vinland, or built durable buildings there. * * * On the contrary, our plain, business-like narrative tells us that Thorfinn Karlsefni tried to found a colony and failed; and it tells us why it failed. The Indians were too many for him. The Northmen of the eleventh century, without firearms, were in much less favorable condition for withstanding the Indians than the Englishmen of the seventeenth; and at the former period there existed no cause for emigration from Norway and Iceland at all comparable to the economic, political and religious circumstances which in a later age sent thousands of Englishmen to Virginia and New England."

So we must give up any notion that the old mill is an architectural relic of the old Vikings. At present the extremely scanty historic records of American settlements previous to the time of Columbus precludes the possibility of knowing anything definite and thoroughly reliable about the old tower. The question still remains: Who built it, and what was it built for? There it stands, an enigma, like the Egyptian Sphinx; an intensely interesting historic interrogation point.

F. SCHUYLER MATHEWS.

Rhododendrons on the Estate of Mr. H. H. Hunnewell, Wellesley, Mass.

The beautiful grounds of Mr. Hunnewell at Wellesley have been visited by hundreds of the readers of the AMERICAN FLORIST, and the fame of the place, its proprietor and his talented gardener, Mr. F. L. Harris, extends beyond the sea. Mr. Hunnewell has undoubtedly done more than any other person to popularize the rhododendron in America. None has studied the rhododendron so thoroughly, none loves it more. For many years all the promising novelties have been imported and tested, watched and cherished under his eye as though they were his children. At the annual rhododendron exhibition in Boston upwards of one hundred dollars in premiums are awarded each year from the income of a fund which Mr. Hunnewell has given for the encouragement of rhododendron and hardy azalea culture.

The greatest disappointment to the rhododendron fancier has resulted from the introduction of varieties not sufficiently hardy to withstand the extremes of our climate, tempting in the beauty and delicacy of their color, but with an insufficient proportion of the hardy Catawbiense blood in their constitution, or, as is frequently the case, grafted on the ponticum stock, which is all right for England, but valueless here for exposed planting. The buyer should beware of misleading lists of so-called hardy sorts. In another column we give a list of varieties which Mr. Harris recommends as thoroughly hardy and suitable for general planting in the latitude of Boston. Among them are quite a number of fine, clear shades, and they comprise a sufficient variety and range of color to satisfy any reasonable demand.

Mr. Harris emphasizes depth of soil as one of the most essential requirements of the rhododendron. The bed should be not less than two and one-half feet in depth. The soil at Wellesley is a light sandy loam, and this with a mixture of swamp muck seems to suit them exactly. Another important point is to see that the plants do not suffer from dry weather in fall. If not provided with an abundance of moisture branches will die, buds will go abortive and the vigor of the plant will be seriously impaired. If properly cared for in this respect the rhododendron will endure a good many more degrees of frost than if weakened from lack of nourishment. One secret of Mr. Harris' success with rhododendrons and hardy azaleas lies in the fact that all flower heads are pinched off as soon as the blooms have fallen, so that no seeds are allowed to form, half a dozen men being employed at once upon this work.

RHODODENDRONS AT MR. H. H. HUNNEWELL'S, WELLESLEY, MASS.

Of all the attractions at this beautiful place none surpass the rhododendrons, which bring thousands of visitors during the flowering season. The display this year is pronounced by Mr. Harris to have been the finest on record, the season having been especially favorable for them. No description can convey an idea of the beautiful spectacle so well as the photographs which we present in this issue. Many of the plants are thirty years old, and specimens twelve to fourteen feet through are not infrequent. The beautiful specimen plant shown in one of the photographs is one of many fine seedlings raised by Mr. Harris, but never named.

The tender varieties are stored in pits during cold weather. As soon as the season opens they are taken outdoors and planted where during the flowering season they are to be protected by a tent.

RHODODENDRONS AT MR. H. H. HUNNEWELL'S, WELLESLEY, MASS

Those varieties that are tardy in blooming are kept a week or two later in a pit with a glass roof so as to advance them and bring the full display on at one time. If the plants show lack of sufficient moisture when removed from the pit the roots are thoroughly saturated with water before planting. This is done by dipping them in a large tank, a laborious job with the big plants and their heavy clumps of roots. The tent is spread over them when they begin to open the flowers, and is removed as soon as they fade, the plants being left as they stand till November 1, when they are returned to the cellars. The tent shown in the photograph covers about half an acre and is thirty feet high in the center. New canvas is required about once in two years.

The kalmias are in bloom with the later rhododendrons and make a grand show. Mr. Harris attributes the many failures in kalmia planting, as in evergreen planting, to the lack of dense fibrous roots in much of the stock purchased, and which can only be secured by frequent transplanting in the nursery rows while the plants are young. Imported plants are apt to give greater satisfaction for this reason, transplanting being systematically followed up in the European nurseries. The border of variegated Funkia japonica makes a pretty edging for the kalmias. It requires less care than grass, and being a rapid grower soon makes a dense close growth to the exclusion of all weeds.

The famous Italian garden at Mr. Hunnewell's is the most notable example in this country of this peculiar style of gardening and is pronounced equal to the best in Europe, from which it differs only in the absence of statuary, which is a prominent feature of Italian gardens. It was commenced thirty-five years ago, but many of the trees had been in course of special preparation for some time previous. It occupies a stretch of about $2\frac{3}{4}$ acres on the steep hillside overlooking Lake Waban. The trees used are white pine, hemlock, several species of arborvitæs and retinosporas, golden yews, purple beeches, junipers and the European larch. The latter is very attractive, especially in early spring, with its soft light foliage. Some of the trimmed white pines are forty feet high and banks of hemlock are fifteen to twenty feet in height. The care and trimming of these and clipping of the steep sloping banks is slow, tiresome work. Trimming the trees and hedges begins in the first week in July. The hemlocks are not trimmed till September, that being the most favorable for them. A few clumps of rhododendrons are planted at the brow of the hill, and during their flowering season are very effective in this location.

Past and Future of the Business.

WM. SCOTT ASKS SOME PERTINENT QUESTIONS —"WHERE ARE WE AT?"—PRODUCTION AND DEMAND.—PLANT DEPARTMENT LEAST OVERDONE.—WONDERFUL CHANGES IN TASTE AND AMOUNT OF SALES.—A LOOK FORWARD.—PRACTICAL VIEWS OF A PRACTICAL MAN.

When we meet in Providence this week one year will have passed since many of us had an opportunity to exchange views personally. The time at which our convention is held is very properly a time when the least attention to business is needed and with the vast majority of florists our business is then at its lowest ebb. We should know almost accurately whether we have prospered or are worse off than in August '96, in short we should know "Where we are at." Briefly I propose to review this subject and remember gentle reader my field of observation, compared with some of yours, is limited.

Business, taking all branches of floriculture, might be considered about the same as from '95 to '96; if one department shows some increase there has been others not so satisfactory, and if the aggregate of our business has been slightly greater there have been more individuals to participate. I think it will be conceded by all who have an opportunity to come in contact with the retailer, the grower and the commission man, that for several years past and during the year just closing, the production has increased at a much faster rate than the demand.

From personal observation I would say that the least overdone part of our business is the plant department. The more humble part of our citizens are yearly showing a desire to have a few

bright inexpensive plants in their windows or in their "door yard," while people of larger means without being rich are all buying a palm, an araucaria or a rubber for the hall or sitting room. When we look back 25 to 30 years and remember that a scrubby latania, a ragged Brahea filamentosa or elongated Oreodoxa regia was the stock in trade in that line of the leading florists of many of our large cities, the present magnitude of the trade in palms and kindred plants is more than amazing and can be likened only to the evolution and use of the bicycle, and I confidently look for a steady and continuous increase in the use of this class of plants. Nor has the growth in the demand and sales of our cheaper plants been much less remarkable.

the moss was hidden; and once more think of the early attempts at a funeral design tied to a lath frame, and later a wire design. If you were to see one of those crude but costly pieces today you would not think it fit to adorn the obsequies of a favorite dog. Contrast all that with the taste, art, skill and quality of the flowers used today.

I look also forward a few years to a large increase in all departments of our business, especially in plants among a class of people who have for the past 4 or 5 years had something more important to think about than buying flowers for their friends or ornamenting their grounds. In almost every city of the Union there had been for several years up to '93, a real estate boom. It was an

"intoxicated with the exuberance of our verbosity."

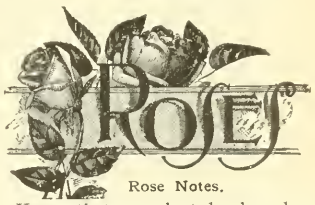
Hitherto all I said has a rosy tint but with all that there is no doubt that the past 4 years production has overtaken demand and in some departments passed it. I beg to think the producers of cut flowers have been the greatest sufferers. To remedy this no one man or convention of clever men can pass a law or give advice that will be much heeded. Ours is not the only business suffering from over production. In every small industry we find people rushing in because they think there is a dollar in it. This country perhaps of all civilized countries is noted for the enterprise of its citizens but that enterprise is carried so far that if a man is seen to be making a modest living from

RHODODENDRONS AT MR. H H HUNNEWELL'S, WELLESLEY, MASS.

To attribute the enormous increase in sales in every department of our business to an increase in population would be folly, for while a city has trebled its population in 20 years its annual sales of horticultural products have increased 50 fold, yes, I believe 100 fold. The same marvelous development of taste and consequent demand and supply in cut flowers is equally stupendous and all true florists must look with pride on the progress made during the past 25 years in that, to many, most important part of our business. Whether it has been the taste of the public or the progressive art of the florist that has wrought this wonderful change I will not venture to say. To be reminiscent a moment, think of that wonderful thing of intricate construction, so carefully described in that excellent book "Henderson's Practical Floriculture" and known in those days as a bride's bouquet, or the baskets of flowers of 25 years ago which our mothers received when they sailed for Europe or held their silver wedding. The basket contained usually among its floral ornaments a dozen genera and fifty different species of flowers, in fact the more the better as long as

estate boom if it was not very real. Miles and miles of suburban territory was taken in, the owners laid out streets, and hundreds of thousands of young business men who were then apparently prosperous and saw no cloud on the horizon bought a "beautiful lot" and built for his young bride, and sometimes his old one, a lovely house costing from $5,000 to $10,000, making but a small payment on the lot and getting "assistance" as the house progressed. The bottom dropped out of the suburban real estate boom in '93 and left these worthy people little in the way of adornment to the homes except a mortgage, which usually blooms twice a year. I am concious that I am not picturing the case of a few individuals in one city but it will apply to all the land. These good people will get out of their trouble before long, for better or *steadier* times must come, and if business and wages do not return to their fond hopes and ideals, they will drop their ideals to the actual state of affairs, live accordingly and get out of debt. How our business will boom when everybody feels as they did 5 years ago could be optimistically spread out till we could become

a business in which he has had a life long experience there is a dozen ready to try their hand with full confidence that they will succeed although they may have little capital, and what is of far more importance, no previous knowledge or experience of the business; and what business is more pestered with this class of people than that of the florist. No matter whether a shoe maker has failed at his last, a blacksmith at his forge or even a preacher in his pulpit, they have been failures nigh onto middle life; all at once they learn of some florist making a living by raising flowers. "They can do that. Why it's easy, besides the work is so pleasant, and they always were fond of posies." The country is full of these people and they have had a hard row to hoe lately. They would be far better off earning moderate wages at something they understand, and if a few hundred or thousand drop out of the business it would impart a much healthier tone to the whole trade. That supremely true law "The survival of the fittest" is grandly true, and however hard it may seem on some the unfit must succumb to the inevitable. This I think is the great



A SEEDLING RHODODENDRON PLANT 14 FEET IN DIAMETER AT MR. H. H HUNNEWELL'S.

est evil of our business, and let us trust that at least till the coming prosperity warrants it the shoe maker will "stick to his last." He produces a very second quality flower when he joins the florist ranks and gets but a second quality price for it, and when there is a surplus of flowers, which there has been the whole time for the past year (except about two weeks at the holidays) he is the first to suffer. But while suffering he has dragged down the price of good flowers for those who have paid good wages to skilled men to produce a good article. I am not unmindful of a few bright men who have left some other business and gone into horticulture, for I know a few both here and in Europe who are a shining success, but they are an exception to prove the rule. These men had the born instinct of a gardener, but did not have an earlier opportunity to show it.

Don't think me presumptuous if I offer a few suggestions to those embarked in the business and whose sales, especially through the commission man, have been anything but satisfactory this year. As the large majority of the florists have not yet joined "Debs' social democracy," nor any "North American flower growers' trust," nor any Utopian community where the industry, energy and integrity of the individual will be obliterated for the welfare of the whole colony, but supposing you are doing just what your heirs and successors will do for generations to come, viz. looking after No. 1, trying in all honorable ways to make a little more money out of your place than your neighbor, then there are one or two things you can do to help yourself. First of all go slow in building any additions unless your business fairly demands it. If your roses or violets outsold all competitors last year and the demand for them was in excess of the supply, you are warranted in building and producing more. It is not your fault that your neighbor's flowers were not so good. It was your superior skill, and what's the good of any skill if it is not of the superlative kind. But there are not many of you gentlemen in the land in this happy state I have described above. Ninety-nine per cent. of you, big and little, had a difficulty to dispose of your stock at fair paying prices and many weeks in the winter your stuff produced a very low price, and to many of you the commission man's return was often "nix." Don't get a swelled head and remember only the two or three weeks when violets and carnations brought a good price and you could have sold a few thousand more at that time. Think, before you produce any more, of the forty weeks when your flowers were a drug and you had to take starvation prices for them. There is another thing you can do to help your affairs with the same amount of glass. You can grow half the quantity and double up on quality. I was never more impressed with this fact than the past winter. Our patrons are ready and willing to pay for quality, and he that keeps it will sell it every time, and if the retailer can get a good price the grower will reap his reward. In short there has the past few years been too much poor rubbish produced and sold or given away at miserable prices.

I have no fear as to the future of the business, for it must grow and will provide a healthy and honorable living to many thousands, but go slow at present, put you whole energy and skill into what houses you have, produce the best article of its kind there is in the market and you will be happy. Hoping to meet you all at Providence, I am sincerely yours,

WILLIAM SCOTT.

Rose Notes.

Houses that were planted early and are now producing bloom may have both the growth and the quality of the flowers improved by giving them a top dressing with some suitable material. The question of mulching roses during the summer seems to be a mooted one, some growers practicing it and others objecting to it very strongly. I have occasionally seen houses not mulched, do better than those

which were, still I have always felt that to cover the benches with about an inch of nice fresh material about September, or early in October, could not be other than beneficial, and if the plants were benched in April or May the conditions will be favorable for a top dressing now. One of the advantages of a good solid bed for summer roses is the opportunity offered for the roots to get down into soil that will not be at a temperature of 65° one day, and 165° the day following as a result of sunshine, or the absence of it, as is often the case with the small amount of soil on a shallow bench. Some growers use as a summer mulch old mushroom manure, or anything of like character, containing little that is stimulating, but serving the purpose of keeping the soil cool and preventing a too rapid drying out, and where such material can be had it may be used to advantage very soon after planting.

For mulching summer blooming stock or to use later in the fall I prefer a better class of material, which will not only tend to minimize the evaporation, but also furnish additional food for the plants. Well rotted cow manure is the material generally recommended, but I have been better satisfied with the results when we have used a mixture of half manure (which may be either horse or cow, only it is well rotted) and half of good soil. All manure is apt to lie too close at first, but when it has laid some little time gets dry and hard and is of little value. On account of the ammonia that it contains there is always a certain amount of risk involved in the use of manure only as a mulch; many a careful grower has had to endure the chagrin and mortification of seeing the foliage blacken and fall after an application of manure that was considered all right, but proved too strong and fiery; there is hardly any danger of burning, however, when it is mixed with an equal quantity of soil, as the latter absorbs and retains the surplus ammonia instead of its escaping into the air.

If we have reason to think the soil is deficient in potash we usually give a light sprinkling of wood ashes before applying the mulch, and if phosphoric acid is needed, a little fine bone meal will supply the need.

Florists as a rule have their hands full all the time, and have so many things claiming "present attention" that the needs of the future are frequently not provided for at the proper time, and when we are ready to mulch it often happens that there is no suitable manure in sight, so we must either pay 50% more for the material because of urgency, or do without it altogether. It takes a clever man to look ahead and be always on time, but such a man will have a much easier time than he who spends half his energy in framing excuses for being behind his neighbors.

Hybrids: Many growers aim to have in a batch of these for the holidays, but they generally succeed about as well as those who try to force tulips for Christmas. Certainly a few good blooms are seen occasionally at that season, and we hear a great deal about so and so's fine Jacks or Brunners, and the fancy prices paid for them, and everybody intends to have some another season, but we seldom hear a word about the houses started for Christmas which proved failures; we like to talk about our successes but we are generally mum in regard to our failures. To those who may be thinking of trying for big things this year I would offer a word of caution. If they haven't tried it before, they will find out that while it is child's play having Brunners for Easter, it is no small thing securing salable blooms for Christmas.

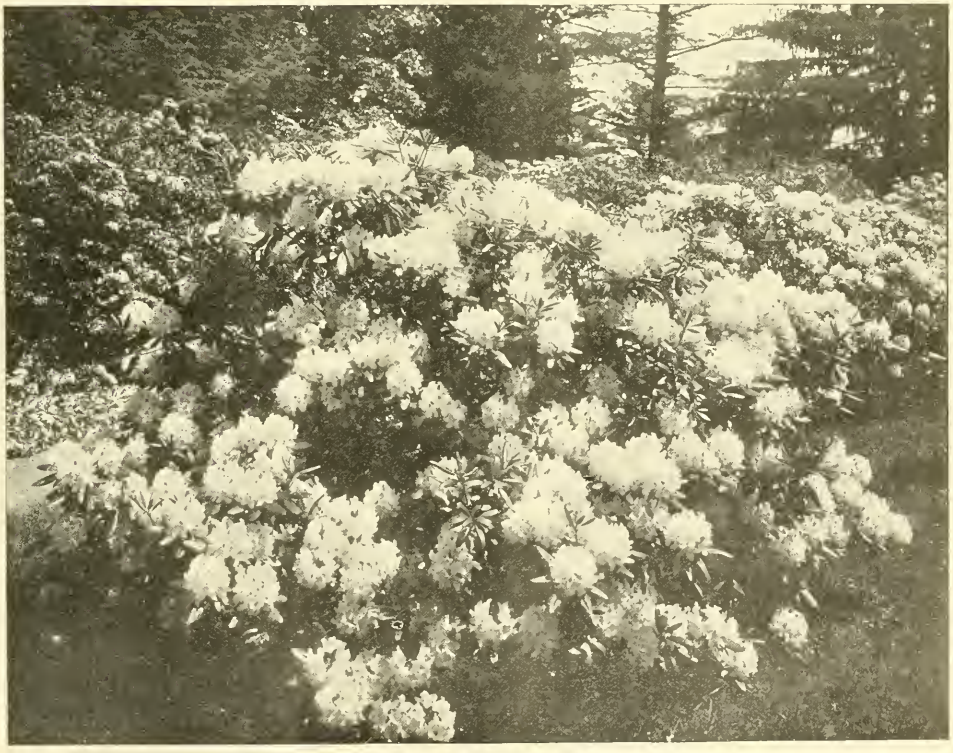
In the first place it is of prime importance that you have a good, light and warm house for early work, and it is no use attempting to force hybrids for Christmas unless they have completed and matured their growth; those full of soft immature shoots will not pass safely through the ordeal of drying and ripening. Pot or bench grown stock is the only kind available, box plants are out of the question, and it will be necessary to have them pruned and started by September 15, in order to be in bloom by December 15, and the resting period will take up about six weeks, so it is evident that they must have been kept dry at least two weeks when these notes appear in print. I am not an advocate of severe drying, as I think it hurts the roots to such an extent that when they are pruned and started they lack the necessary vitality to make a strong and vigorous break, and without it there can be no choice flowers.

I think that with good stock to start with the battle is half won when we have succeeded in bringing them through the resting season without any shrivelling of the wood or injury to the roots; still there must be a genuine rest, a cessation of growth and a ripening of the wood, or our labor and expense will go for nothing. The only way to accomplish this will be to ventilate as much as possible, keep the soil just dry enough to arrest growth, but not so dry as to exhaust their vitality. In hot weather it is no easy matter keeping the proper balance, and as no guessing or half way measures will answer, if we are not prepared to give them the closest attention it were far better for us to not try the experiment at all. ROB'T SIMPSON.

Carnation Notes.

In my last notes I wanted to impress on my readers the advantages of having the houses ready in time for planting so as to be in a position to take advantage of the first favorable weather that may present itself. We hear so often in the fall and early winter when a house does not look at its best, that the plants were caught in a hot spell during or right after transplanting. We all know the injurious effects of such a time, and how quickly a favorable opportunity may be lost when a house is yet to be prepared. The few cool days that may have helped the plants to become established are very valuable time lost.

Again we often hear the remark during the time of field culture that plants did not grow, for the weather was too hot for a time. Now if plants will not grow in the field when fully established in hot weather, how can fresh transplanted plants be expected to do so in the house at such times. With all the precautions, as shading and watering, when the temperature outside is above 80° in the shade, fresh transplanted plants will suffer inside. There is no more action in the plants than in a cut spray placed in water, and the draft of evaporation through the leaves is rather increased in the inactive plant. Otherwise when only under the helpful influence of a cool atmosphere for two or three days, the plants may have passed the critical point, that is root formation may have commenced, the plants are active again, and are better fortified against unfavorable conditions that may follow.



I am in favor of early planting providing it can be done in a temperature of not over 75°; if lower so much the better. In a temperature of from 60° to 65° plants will recover quickest. I do not care so much whether the weather is moist or dry, rain or sunshine, only cool; beyond that things can be regulated in the houses. There is no gain in early planting when it is done in hot weather. Often plantings made two to three weeks later but under favorable circumstances will outgrow the first. Therefore I say again, be prepared and watch your chance. The transfer from field to house, the precautions to be observed to be successful, have so often been enumerated and described that I will touch only on the principles of this work. How the different parts are worked to the best advantage, hints and descriptions have been given in former notes and often one has a better way to do a certain work than he is advised to do.

When a house is ready and cannot be planted at the desired time, keep the soil moderately moist, ready for planting at any time. I object to planting in dry soil as much as to smear the plants in mud, for the moisture on the roots is quickly absorbed by the dry soil and may result in injury before the subsequent watering will reach the roots. And if the soil is kept moderately moist, one may have a chance to destroy a crop of weeds, that later on has to be done between the plants.

When transplanting the first principle is to guard the plants against the draft of evaporation, to retain a balance between the injured roots and the uninjured leaves. Plants torn out of the soil receive the most severe check possible, for with the most careful lifting we break and tear the roots and only about half of them can be saved; and when ever so carefully planted again, the plant is unable to stand the draft of evaporation when not protected. We have to balance the diminished injured roots with the full supply of sound leaves by lessening the evaporation therefrom to enable the plant to hold its own and repair the injured roots. This makes it necessary to reverse conditions for a short time, and effect a change to the normal again gradually. We have to shade where otherwise we give the full light; we have to keep the house closed or nearly so, where we gave a full supply of fresh air; we have to keep the air and foliage moist, where we intended to keep it dry. We reverse all these conditions to lessen the evaporation through the leaves, and help to maintain a cool atmosphere that is so beneficial to the carnation at all times, and doubly so at this time for repair and recuperation.

I have said above that the change to normal should come gradually, for as soon as the plants show signs of growing, were the condition of the house kept the same it would result in injuring the plants as much as it had sustained them before. As the balance between roots and leaves becomes more equalized the condition of the house should change so too. The shading should be of such a character that it can be easily removed. We generally use a mud wash. The ventilators should

RHODODENDRONS AT MR. H. H. HUNNEWELL'S, WELLESLEY, MASS.

RHODODENDRONS AT MR. H. H. HUNNEWELL'S, WELLESLEY, MASS.

be kept open at night and gradually more air given during the day time. Syringing should also be done more sparingly. With us when the plants are once established it ceases altogether for the whole season. After the first copious watering be careful that the soil does not remain too wet, for such a condition will retard root action. The syringing that the plants will receive after the first watering is generally enough for the soil until more air and light is required. Our efforts are gradually turned in the opposite direction and should be just as strong to guard the plants from growing too soft and open the door to disease, as it has been to protect them from wilting and drying out.

Other precautions are to guard against the drying out of the roots in the transit from field to house. If the distance is far lay some wet moss in the boxes for the roots to rest on. Every small fibrous root saved is so much less for the plant to replace. The least delay that may occur between lifting and planting is for the benefit of the plants.

The housing of the plants is always as much dreaded, as it is an ordeal for the plants, but judicious care will always be rewarded with success. To a person not familiar with plant life it may seem that with an abundance of water a plant can overcome everything. Plants need water but they can not live on it, neither can they mend any breaks and bruises with water. The first action, or I may say the first impulse, of a newly transplanted plant is to form new roots and take a fresh hold of the soil to enable itself to take up nourishment and continue its interrupted growth. The material to form new roots comes from the plant just as from a cutting placed in the sand to root, providing its surroundings encourage and sustain it to do so, and not from the nourishment in the soil; for the organs to take up nourishment were destroyed in lifting the plant.

Now there are other powers in plant life that may come into play and retard root formation. It is nature's law of reproduction to mature seed, when you leave any half formed buds and flowers on the plant. In the crippled condition the plant is in we must not expect too much; if its strength is divided all will suffer. Our first object is to establish the plant, and then let it bloom. The few buds will never amount to much and are better removed before planting, to give the plant a chance to concentrate all its strength in the formation of new roots. We remove all buds as fast as they appear on the plants in the field, unless we care more for the flowers than the plants.

It is almost needless to add that the plants should be thoroughly cleaned of all decayed and diseased leaves. A rigid adherence to this work may save much vexation and trouble afterward.

FRED. DORNER.

Nitrate of Soda for Carnations.

How much nitrate of soda should be used to ten gallons of water in watering carnations? S. J.

I have never used any nitrate of soda on carnations and can not speak from experience. I would like to hear myself from other growers that have had experience with it. I did use it once on chrysanthemums and the results caused me to avoid it altogether. I rather believe it may have a tendency to affect the color of the flowers, making them appear washy, and making the texture soft, thus affecting their keeping qualities, but I may be mistaken. Undoubtedly mixed with other manures, especially stable manure, it will prove of value. My advice would be to use it in a mild form in a mixture of liquid manure. FRED. DORNER.

Sweet Pea Novelties.

As the sweet pea season is again upon us a few words regarding the novelties will not be amiss. Of Eckford's '97 set I will say that we have got several very beautiful new varieties, all of which will undoubtedly become standard sorts, both for cut flowers and other purposes. For instance in Prima Donna we have got a grand new pink. The color is self and very soft. The form and size are perfect and it is of robust growth. It very often has four flowers to the stem. We believe it will become the standard pink sweet pea for cut flowers.

Mars is another beautiful creation of Mr. Eckford's and is undoubtedly the finest crimson up to date. It has a good form and fine size. The color is bright firey crimson and deepens somewhat with age, and like all other crimsons burns somewhat in the sun.

Coquette is another grand flower of large size. The wings are a clear primrose yellow while the standard is a pale lavender. It has proven itself to be a very free bloomer and is sure of a permanent place in the list of sweet peas.

Lovely is of a very pleasing shade of pink. It has not as yet got the hooded form but its large size and pleasing combination of color has won it much praise. Standards are of a blush pink and the wings of delicate rose. The flower is very pleasing when bunched.

Countess of Shewsbury is a great disappointment in every way. In the first place the flower is very small and of poor shape and secondly the color is not at all pleasing. The standard is of a soft rose with clear white wings. It is quite prolific but is hardly entitled to be placed among the list of good sweet peas.

Royal Rose, unlike the last described variety, is a very grand thing. The flowers are of extra good size, in fact it is one

TENDER RHODODENDRONS UNDER TENT AT MR. H. H. HUNNEWELL'S

of the largest sized sweet peas we have and the color is most pleasing. The standards are of a deep rosy pink and the wings a lighter shade of rosy pink. It is a great improvement over Apple Blossom and when bunched produces a very charming effect. It is destined to become a popular cut flower variety.

I will now add a few remarks concerning Eckford's set of '98 novelties, or the varieties he is to introduce to the trade next season. Of course this being the first year that we have seen them in bloom, and being their first year in California soil, I will not attempt to draw any definite conclusions but will state how the different sorts behaved this year with two of our leading seed growers.

Countess of Powis is described as the grandiflora form of orange salmon but from its conduct this season we can see no improvement whatever over Meteor. One thing is certain that it shows no grandiflora form and no improvement in form or color although it is probable that with another year's cultivation it may develop into what Mr. Eckford claims for it.

Lady Nina Balfour is a very soft delicate lavender. The form and size are very good. This being its first season it did not germinate very well but that will in all probability be overcome in another year's growth. It seems to shade into a dove grey with age.

Prince Edward of York also has not come up to what is claimed for it. The shape is poor and seems to be no improvement over the old Princess Victoria. The color is light scarlet and cerise. Like the other sorts which have not proved to be anything extra good it may prove better another year.

Queen Victoria is undoubtedly the finest of Mr. Eckford's advance set. It is a rich primrose cream of the largest and finest form and possesses great substance. Another thing in its favor is that it is black seeded. Heretofore all the primrose yellow sweet peas were white seeded, which did not at all help their germinating powers. The germination of this variety was perfect with us this season. It will probably become the leading primrose yellow and will be much admired when thoroughly known.

Salopian is probably the latest advance which we have in crimson sweet peas. It has proved of much better form and larger size than Mars and holds the color much better in the wings. It is a very robust grower and produces a large quantity of beautiful self colored flowers and when thoroughly known will take first rank in reds.

Shahzada is undoubtedly the nearest approach to the black sweet pea that we have seen. It is of the deepest indigo black and of fine form. It also gives promise of becoming one of the largest flowered sweet peas.

Triumph has proved a disappointment and nowhere can we see any improvement over existing pink and whites. It has good size but poor form. It is a very robust grower and a good bloomer.

As I stated before these may be better flowers next season but the above lines will give an idea of how they were in California during the present season. California is to send out again this season some new varieties of sweet peas which will prove as good as the best Eckfords. C. C. Morse & Co. have five new varieties of which I will add a brief description of each.

One is an improved Meteor and it truly is a great advance on that good variety. Countess of Powis is supposed to be an improvement on Meteor but this new variety is much better than either. It is the most brilliant salmon color I know of. The color is much deeper in the standards than in the old Meteor and holds the color better. It is not so liable to burn as the other sorts and is much larger. We think this ought to prove a standard sort as we have plenty of room for good orange salmon colors.

Another is a beautiful creamy primrose after the style of Queen Victoria. The color is primrose with a very pale pink blush and fades to just a suggestion of pink on the edge. The size and form are all that could be desired and it is a very robust grower and prolific bloomer. It will also become popular when thoroughly known.

Another, being an improvement on Lady Penzance, is to be put on the market this season. It possesses all the good characteristics of that popular variety but is of a much better color and larger size. It seems to be stronger than Lady Penzance as it does not burn so much as that variety does.

They also have a very beautifully striped variety. It is a pale blush stripe on a primrose ground. The stripe is in both wings and standard giving it a very soft effect. It has the improved form, is of large size and as it is a new thing in stripes will be much admired.

A very much improved Alice Eckford, or I may add, a selection from that variety, was seen in full bloom. It has much better size and form than that variety and it is very hard to find a stem without four flowers. It is very prolific and a valuable novelty.

At Mr. M. Lynch's place at Menlo Park we found three valuable new sweet peas which will go out to the trade this fall. The gem of the set will, without any doubt, be his new white, the Bride. This is a beautiful large white-seeded white which Mr. Lynch has been selecting for over four years. It is a pure white selection from Mrs. Eckford and is the strongest germinator among all the white seeded varieties. During the past season it has brought the highest figures over all other white sweet peas in the San Francisco market. It will undoubtedly take first place among all white sweet peas.

Emily Lynch is a selection from the Duke of York but is much larger and has the improved form. It is of very rich effect and is claimed to be the earliest sweet pea in existence. Mr. Sam. A. Hamilton, the well known sweet pea expert, says that he thinks with proper cultivation it will bloom two weeks ahead of extra early Blanche Ferry, which fact alone will make it a very valuable novelty.

California is a very soft, self pink, being of the color of the Daybreak carnation. The form and size is splendid and it is of a very distinct shade, being probably the lightest self shade we have. It is a very much admired variety.

Our leading growers are having a hard time of it to hold some of the newer varieties to the original type. Countess of Aberdeen, for instance keeps running off into different shades of pink. Royal Robe does the same thing. We have had them selected from a single plant and in a year or two they are again mixed with different shades. Mikado also has a tendency to go back and the growers have to keep a very watchful eye on other sorts or they would behave the same.

Aurora, which came out this season, has done splendidly and is very popular, and another thing is that it holds very well to the type.

The new Blanche Ferry Cupid which is to be sent out this fall, has done splendidly. Its germinating powers are just as good as those of the tall growing Blanche Ferry and the flowers are as large if not larger. A row of it placed alongside of the white Cupid makes a very pretty effect. It is just as early as Blanche Ferry, which will make it more popular. People who found fault with Cupid on account of poor germination will be well satisfied with this valuable acquisition. JAS. T. LYNCH.

House for Mixed Stock.

I wish to erect a small greenhouse, say 20x50, three-quarter span. The ground being dry and very gravelly I wish to sink the house so the lower walk will be about 3 feet below ground level. I want to have brick walls running to the surface, and to divide the house by glass partition in the middle so that one end can be run cooler than the other.

I want to grow a mixed greenhouse stock in warm end and 'mums followed by temporary benching for lettuce, radishes, geraniums, cinerarias or anything that grows rather cool. I would like an estimate of cost of such, plain and substantially built with proper height and dimensions in general. I want to heat by hot water. What depth should furnace pit be considering that the house is so far in the ground, and what size should potting shed be to be convenient? Any other advice or suggestion will be thankfully received. AN OLD SUBSCRIBER.

"Old Subscriber" does not say which way his house runs, whether north and south or east and west, but as it is to be three-quarter span no doubt the ridge will be east and west, and the long span face south, or what is a little better, a few points east of south.

To begin with, for a house of these dimensions I do not approve of the three-quarter span roof. No doubt it is a fine style of house for roses, but "Old Subscriber" wants his house for mixed plants.

LAURELS ON THE ESTATE OF MR H. H. HUNNEWELL, WELLESLEY, MASS.

THE ITALIAN GARDEN ON THE ESTATE OF MR. H. H. HUNNEWELL, WELLESLEY, MASS.

The three quarter span is more costly to build, needs more expense in benching and is not so convenient to heat. If the south sash bar is 12 ft. and the north bar 11 ft. it will throw the centre of roof just north enough to allow the centre iron support of roof on the north side of middle path.

The idea of going down 3 ft. into the earth with the house is no doubt to save heat. It may do that to a small extent, but as the walls are to be brick the saving of heat will be trifling. If the floor of house is 3 ft. below grade of surrounding surface you will have that 3 ft. to descend and ascend every time you enter the house, besides the great inconvenience of taking out and in material, soil, etc., so, as my advice is asked, build the walls both north and south, 4 feet 6 inches high. Don't go down below grade one inch, and let the sash bars be 12 ft. on south side and 11 ft. on north; this in a 20 foot house will give you two benches of 6 feet 6 inches each and three narrow paths, one against each wall and one in center. There will be no benches against the walls; it is no place for them, but on the walls will be your heating pipes, the right place for them.

Notwithstanding that it is occasionally asserted that you can place a hot water heater on the same surface as greenhouse and get satisfactory results, all experienced men know that it is much better to have your boiler 6 feet below the surface of greenhouse. This is not theory; I know it for a certainty.

If the house runs east and west let your shed be on the west end. If it is the only shed on the place let it be as roomy as possible; you will need it for pots, soil and many other things. It should be at least 20 ft. long and 16 ft. wide. If you can afford to excavate 6 feet deep under the whole of the shed the space will come very useful, for there you can put in your winter's supply of fuel.

The partition running across the house is all right, and the heat can be regulated by the number of pipes in each compartment. Let the warm end be next the shed and have the means, by valves, of shutting off heat entirely from the cool or east end.

The height of this house from ground level to ridge pole will be about 10 feet 6 inches. The cost per running foot all complete ready to use will depend largely on what ability "Old Subscriber" puts into the construction himself. I have seen right in my own neighborhood a 20 foot house cost $20 per running foot that was not worth $8 simply because the builder knew nothing about greenhouse building. Built of strong cypress bars, with good wooden walls, double thick glass, and heated with 1½ and 2-inch pipes, this house should cost about $10 per running foot. With brick walls it may cost $2 or $3 a foot more.

For heating use 2-inch pipe for flows and 1½ inch for returns, and hang them on the side walls where they are easily put up, do the most good, and are easily got at in case of any alterations or repairs. Don't let any one persuade you to put the pipes above the plants, or what is called overhead heating. I did it to my great sorrow, and those who still advocate that system have wheels above their shoulders.

W. SCOTT.

Odontoglossum Crispum.

This odontoglossum has been aptly described as the "Queen of Orchids" by one who has done more for orchid culture than perhaps any other man, and while it may be taken exception to by some, if applied literally, it certainly does not overpraise this beautiful species. Fickleness is not usually regarded a virtue, but the term might almost be applied to this fine old orchid in that no two have yet been imported that were alike. The spotting on the flowers varies on each individual bloom on the spike, and some varieties that come pure white one year will be spotted the next year, but all these uncertainties add to the interest to the cultivator, especially if his plants be newly imported from the woods in which they grow. The specimen flowers illustrated are from a plant that has invariably proven pure white, and while this is not a rare occurrence it adds to the value of the plant considerably.

Odontoglossum crispum is from the Andes of South America and requires the coolest possible treatment under cultivation in summer. A house with a north exposure, such as one devoted to propagating in winter and ferns in summer, would grow them well with plenty of air and moisture nearing the saturation point, with a temperature in winter of about 50°, for as the growth is mostly made in winter they must be kept moving, and the crop of flowers is produced

in spring and early summer. The sprays lend themselves admirably to making up as corsage bouquets, as their habit is arching, and with Asparagus tenuissimus they make a charming arrangement.

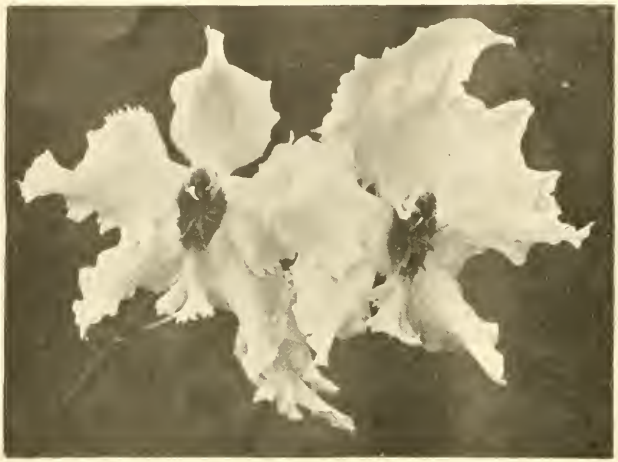
E. O. ORPET.

Miscellaneous Seasonable Hints.

CHRYSANTHEMUMS.

If you planted out on the benches your chrysanthemums for pot plants, which I hope and trust you did, for it is the right way to grow them, they should not be pinched later than the 20th of this month. And they should be lifted from the bench and potted not later than the 1st of September. The great advantage of planting them on the benches in June and lifting and potting in September is that they are entirely under control for the dry, hot months, but what is of more consequence, you can lift them without their losing a fibre, and there is no occasion that they should lose a leaf, which plants lifted from the field invariably do. They may not be as large as you would like them on September the 1st, but remember they make lots of growth after that, in fact they double in size. Why it is of the greatest consequence not to delay longer than end of August is that then there are no flower buds formed, but ten days later there would be and the lifting operation would cripple them.

If you have a house shaded it is a good place for them for the first ten days after lifting, after that all the light and sunshine you can get. If you don't have a spare bench, a place outside where the sun and winds won't reach them for a week or two will do equally as well. When well rooted in the pots they will grow fast and can be given a light, well-ventilated house, and will need some sort of a tie; what sort of tying will largely depend on the size of plant. If in a 6-inch pot one stake in the center will do, and the branches tied with fine string just to keep them from falling apart. Don't put a string all around the plant, as market gardeners do endive to bleach it, and as you still see carnations tied in some places.



Lincoln in a 7-inch pot will with good management make a plant two feet across is almost indispensable where a general retail trade is done, now is the time to increase your stock. Although the zonal geraniums are as much a pelargonium as the so called show pelargoniums about which I will now give you a few hints, their habit is entirely different and there is where many a young American gardener without any European experience has failed and become discouraged in growing what we generally know as pelargoniums.

Their flowering season is from March to July; some varieties can be forced earlier than March, and perhaps in Covent Garden you would find handsome plants of pelargoniums even in January. Unlike the zonal pelargoniums (geraniums) they are not and cannot be made continuous bloomers, but their season of bloom is longer than many of the plants we prize so highly, notably an Azalea indica, and can be grown and sold at a much less cost. If you have any plants that have flowered this spring they will have made quite a growth since flowering and should have been encouraged to grow to make all the cuttings possible. About the end of this month, a week sooner or later is of no consequence, let the plants be on the dry side for a few days, then cut them down, away down; don't be afraid, cut all the stems off within a few inches of the pot. You can make almost any piece of the plant strike in sand, kept moderately moist and in not too dense a shade. They will take four weeks to root, but you need lose none. These young plants will make you fine plants for next spring's sales; the size will depend on cultivation.

The cut down plants are by no means useless; let them remain in the same pots for three or four weeks and keep almost dust dry; by that time they will be covered with breaks where no buds appeared. Then shake out every particle of soil, trim back the ends of the long roots and repot in a size or two smaller pot than they flowered in, and treat in the ordinary manner. These year old plants are much better adapted for Easter forcing than the young, fall struck ones, and can with a good heat and plenty of light be brought into flower by end of March, and some of the forcing varieties which we have not enough of here, much earlier. The greatest enemy to the pelargonium is the common green fly, but tobacco smoke does not hurt the plant in the least, except when in flower. Firm potting should be given at all stages and no darkness or moisture during the winter months. If kept in a night temperature of 45° it will do with little moisture. From the time the cutting is rooted till the dark days of December they should be encouraged to grow as fast as possible and should by that time be in a 4-inch pot.

PELARGONIUMS.

If you have found the pelargonium a profitable plant, which it should be, and

ODONTOGLOSSUM CRISPUM. ALBINO VARIETY.

ROMAN HYACINTHS.

Roman hyacinths will be here soon if not sooner. I have been asked a question lately about keeping them without potting. I don't think that the bulbs suffer if kept a reasonable time out of the ground. I have planted as late as November 1st, but would prefer to get all of them in the flats by middle of October. If very early Romans are desired put some in flats as soon as received and place out of doors, covering with a few inches of soil or tan bark. If *thoroughly* watered when planted and we get rain at intervals, no more attention is needed, but if a spell of hot, dry weather comes they must get a good soaking occasionally. The planting of the main crop, or those you depend on to carry you through the months of December, January, February and March. I would certainly defer for some weeks yet.

FUCHSIAS.

The fuchsia with all its cheapness and ease of growth is still a popular plant, and if it were a new thing and had the name of orchid would bring dollars where it now brings cents. Thousands are sold in all large cities, and considering the time it takes to grow a fuchsia, and its easy culture, it is even at a low price a profitable plant to many a florist. You have kept a few of your best plants for stock and they should now be out of doors. If not they have done no harm, but now put them out so they will ripen their wood (for the fuchsia is nearly a woody plant), and they will give you much better cuttings than those kept growing in a greenhouse. By end of September the shoots will have ripened and you can then shake out the soil, re-pot, shortening back the weak shoots, and start slowly in a cool house; by November you will get cuttings that will make healthy, vigorous plants. That is early, but you can delay propagating if you don't desire as early a plant.

FERNS.

Don't delay buying your stock of young ferns for filling ferneries this coming winter. It is now, and has been for some years, a feature of the business. Get small ferns from 2-inch pots so you can pot them into 2½ inch pots. You don't want them to grow very much. Above all you

VIEW IN THE CONSERVATORY OF MR. H H. HUNNEWELL, WELLESLEY, MASS.

don't want them in too large pots, for your patrons want a variety in the fernery, and if in large pots you have to shake off most of the soil to get them in. A good customer don't mind paying for the fernery to be replenished every four or five weeks, but if it looks seedy in one week they get tired and are liable to consign the fernery and future orders to the basement of the mansion. The leading growers of small ferns now know what is good for ferneries and can be trusted to fill the bill all right, but stipulate that you don't want any adiantums or gymnogrammes, for they are useless for this purpose.

GERANIUMS.

It may seem childish to be writing about such a well known plant as the zonal geranium, and everybody of course knows how to grow them, but are you not sometimes caught by a frost before you have in your crop of cuttings? I was caught last year and I am not ashamed to own it, for three or four degrees of frost descended upon us about the 20th of September. Procrastination, how much will be laid at thy gate when the final reckoning comes!

While the geranium is the easiest plant to propagate there are often failures made by trying to root them when the weather is very warm. About the first week of September is time enough. If you have a spare bench with two inches of sand, that is the safest plan for that month, and if you have not that, a cold frame with a few inches of sand is just as good providing you have a shaded sash raised both back and front.

Another plan, and the most economical of labor and most conducive towards making good plants, is to pot the cuttings at once into 2-inch pots. Pot them firmly and water thoroughly when first potted and after that be sparing of water till they are rooted. In cool weather it is a waste of time to propagate geraniums in any other way.

If you have any amount of stock to propagate from you need not begin to propagate till the end of the month, but if you are short of some varieties you can take off a cutting about the end of this month, and unless an unseasonable frost comes along you will get another crop of cuttings by October 1st.

VIOLETS.

Violets that were planted out in June without any glass over them will be growing finely now and should have runners and buds picked off. Although they are in solid beds and have free access to air and rain they are not exactly like those grown in the field, and will be greatly helped by an occasional good watering.

WM. SCOTT.

Silence or Acknowledging Receipt of Orders not Acceptance.

First of all, it is to be remembered, an order for goods, however elaborate it may be in form, is not in and of itself a contract. The law views it as but an offer to make a contract. A contract requires a meeting of minds—a mutual agreement of parties to one and the same thing. Until this is expressly or impliedly reached, there is no contract. One party will not be bound, until both are, respectively.

Acceptance, therefore, is pretty apt to furnish the crucial test as to making an order a contract. But in considering what is necessary, in the way of the acceptance of an order to make an effective contract, a careful distinction should be made between orders that are sent in response to some special proposition and those practically emanating from the persons giving the orders. In the former case, the order, instead of being itself the offer to contract, is the acceptance, and if made in the requisite time and form closes the contract, and requires no acceptance of itself. This differs from the case of an order that is to be considered only the first step in a negotiation, as day from night. An order of the latter character must be more or less formally accepted, which acceptance must be unconditional and communicated, or put in process of being communicated, to the person giving the order, before this will become binding, which it will upon both parties at the same time.

True, in the case of an order for goods, acceptance may be sufficiently shown by a delivery of the goods in accordance with the order, which may simply be a

delivery to the proper carrier properly consigned, if made before a withdrawal or countermand of the order. But so long as the acceptance is wanting, either party may refuse to go on, the one by countermanding his order, and the other by refusing to fill it. A mere intention to fill an order is not a legal acceptance of it. Nor is the case changed by writing or printing on the order the words: "This order is not subject to countermand." Whether a particular agent or traveling salesman can accept an order when he receives it so as to make a contract of sale depends wholly on the authority conferred upon him. Where he is empowered to do it, his action will bind both his principal and the person giving the order. If the principal reserves the right to pass impose no obligation on the proposer, although he has done no act and given no notice of his withdrawal of his offer."

Courts of last resort have also quite recently held that the mere acknowledging receipt of orders is not an acceptance of them. In one case a wholesale house, having received by mail an order for goods, taken by one of its traveling salesmen, wrote a postal card acknowledging the receipt of the order, and stating that "the same shall have prompt attention." This was held to be no acceptance of the order, and not to convert the proposal and it into a contract of sale. In another case, where the language was to the same purport, acknowledging receipt of order given to a traveling salesman, and promising it the "earliest possible attention," it was passed as insufficient, without argument.

advanced than in the newer portions. Hemlock Hill, however, which rises to the left of the entrance, is an original forest. The steep ledges are clothed with giant hemlocks and at the foot of the declivity a brook fed by cold springs plunges and splashes over its rocky bed. Every feature of the surroundings is wild and picturesque in the extreme and it is hard to realize when standing in the shadow of those grand old hemlocks that one is less than five miles from the very heart of a great community of nearly a million and a half inhabitants. Boston is fortunate indeed in having had citizens through whose foresight and patriotism these rare bits of landscape have been preserved for the perpetual benefit of the people.

RHODODENDRONS WITH BACKGROUND OF HEMLOCKS ARNOLD ARBORETUM, BOSTON.

Coming back to consider, in this connection, the force of the proverb, "silence gives consent," the supreme court of Pennsylvania will be found saying that, "While it must be conceded that circumstances may exist which will impose a contractual obligation by mere silence, yet it must be admitted that such circumstances are exceptional in their character and of extremely rare occurrence." It added that counsel had not cited a perfect instance of the kind. He who asks another to make a contract [of sale] with him, which is what giving an order amounts to, and gets no answer, the court declares should "repeat his question until he obtains an answer." As is elsewhere said: "An offer is a mere proposal, without any limitation as to time; and, unless accepted at the earliest practicable time, the law presumes it to be withdrawn; and a subsequent acceptance will

Views in the Arnold Arboretum, Boston.

The Arnold Arboretum comprises about 165 acres with five miles of driveways and contains the most varied collection of hardy trees and shrubs in America. By an arrangement between Harvard University which controls the fund from which the Arboretum draws its support and the city of Boston, the entire grounds are made practically a part of the park system of Boston. Many of the plantations are recent and it will be some years before the young trees attain sufficient size for the groups to show their ultimate character.

The South street entrance, which is shown in our illustration, was the first to be constructed and on the avenues leading from this entrance, one of which we also illustrate, the growth is more

Hamburg Exposition.

From the 27th to the 30th of August the program includes a number of special exhibitions and meetings. On the 28th there will be a meeting of the Society of German Gardeners, and on the two following days the members of this society will be entertained by excursions to points of interest, dinners, etc.

The special competitions in summer flowers will be held August 13 to 17. There are numerous prizes for collections of summer flowers in variety, and for asters and clematises.

THE FINAL premium list for the eleventh annual chrysanthemum show of the State Florists' Association of Indiana, to be held November 2 to 6, has been issued. Copies may be had on application to the secretary, Mr. R. A. McKeand, Garfield Park, Indianapolis, Ind.

TRADE NOTES.—DEMAND FOR AMERICAN BEAUTY.—A FISHING EXCURSION.—PRESENTATION TO F. R. MATHISON.—EXHIBITION OF ANNUALS AT HORTICULTURAL HALL.—CONVENTION PROSPECTS.—DEATH OF E. W. BUSWELL FORMER TREASURER OF THE MASS HORTICULTURAL SOCIETY.—NEWS NOTES, PATHETIC, INSTRUCTIVE AND OTHERWISE.

Trade is fairly satisfactory but not quite as brisk as during the two preceding weeks. Good roses are hard to find when wanted and there is a brisk call for the best obtainable, the watering places having the American Beauty fever badly. This keeps the price of Beauties up where it belongs and incidentally gives the market a healthy tone. Carnations seem to be improving in quality, the demand running mostly to white which when good sell for one dollar per hundred. Asters, if good and white, also sell well but colored asters find a very slow market. The gladiolus has the inside track as a cheap, showy and good lasting flower now and the florists' windows everywhere are enlivened by large vases of the brilliant spikes. Pink pond lilies are at their height and are of better quality than for several years, possibly on account of the prevalent wet weather, but they sell slowly. Lily of the valley is seen in small quantities but is rarely called for and the sale of it falls far short of that of previous summers. Stocks, gypsophila, sweet peas, coreopsis, etc., are abundant and help out on the funeral design when the order comes in.

A very enjoyable fishing excursion with Fred. Mathison as guest took place on Friday, August 5. The little excursion steamer "Mather" carried the party which numbered sixteen, and the arrangements being in charge of the veterans Ed. Hatch and M. H. Norton all enjoyed themselves to the utmost. A pool was made up for the captor of the first fish. Charlie Ingram promptly pulled in a sculpin and demanded the money which was refused on the ground that a sculpin is not a respectable fish, and an argument ensued between the two heavy weights of the Boston Club, Tom Cox and Fred. Mathison as to the classification of the sculpin, Mathison claiming that it was a h'insect and Cox insisting that it was a h'amphibious h'animal. Lawrence Cotter in the meantime was busy and landed a silver hake which won for him the money and he followed up his advantage by pulling up a Conger eel which squared matters by biting him. It was voted that the silver hake be sent to Wm. Jennings Bryan. Dinner on the blue ocean was enjoyed with lively appetites and the usual flow of eloquence followed. Mr. Hatch in a complimentary little speech presented Mr. Mathison with a pencil drawing of a very commodious and restful looking chair which he informed that gentleman was a truthful representation of what he would find at his home on his return that evening, with the best wishes of his friends that he might live to long enjoy it, to which Mr. Mathison responded appropriately. Warren Ewell made one of his best efforts and added a large number of new words to his vocabulary. The speech making was rudely broken up by Lange of Worcester who thought he saw a sea-serpent, but failed to convince anyone else. Judge Hoitt was greatly missed from the party and the sympathy of those present was expressed in a unanimous vote of condolence with him on the death of his mother.

Saturday's exhibition at Horticultural Hall made special provisions for annuals, and two large tables the full length of the hall were nearly filled with the bright blossoms of these popular flowers. The first prize went to Wm. Thatcher, Carl Blomberg being second and C. H. Souther third. There was quite an attractive array of other flowers from various contributors and the hot house grapes from Miss E. J. Clark and E. S. Converse were very tempting.

Convention talk is in the air wherever the craft congregate and the list of those intending to visit Providence next week grows longer. A full fledged bowling team is now assured from Boston. They are not claiming anything in advance but some good all-round bowlers will be enrolled and they will not be found at the bottom of the score card. A special meeting of the Gardners' and Florists' Club has been called for Thursday, 11th inst., for the purpose of ascertaining the wishes of that organization as to matters to come up in Providence and to secure unity of action if possible.

E. W. Buswell who for over twenty years was treasurer of Massachusetts Horticultural Society, died at Brooklyn, N. Y., where he has been residing for some years past, and the funeral took place on Saturday, August 7, at Newton, Mass. Mr. Buswell was well advanced in years and death was the result of a paralytic stroke.

During a severe thunder storm last week lightning entered the store of Julius Zinn, on Beacon street, just missing that gentleman in its travels and leaving a permanent reminder of its visit in a ragged track across the marble counter.

One of our progressive Dorchester florists is practicing the Kneippe cure and may be seen at 5:30 a. m. on any bright morning tramping industriously through the dew-laden grass, barefoot.

Lawrence Cotter has a house of fine Souv. de Malmaison roses which he regards as the best summer rose in cultivation. He will run them till middle of December and then throw them out.

The Citizens' Association is again doing what it can to make life a burden for Superintendent Doogue of the public grounds. A recent communication to the mayor suggests another investigation.

Early golden rod is blooming in the fields and is a forcible reminder that summer is fast slipping away. The memory of the oldest inhabitant does not recall a summer so rainy as this.

A movement is on foot to erect a monument to the late Charles Eliot, in some appropriate spot in the grand series of parks which he did so much to secure for the people.

W. A. Bock was badly hurt by being run into by an electric car while driving through Boylston street last Saturday afternoon. The carriage was demolished.

Wm. Holland, 64 years of age, an employe of Newman & Sons at their greenhouses in Winchester disappeared two

weeks ago and no trace of him or explanation of his absence can be found.

C. W. Gibbs of St. Johnsbury, Vt., is making his annual tour of the leading Boston establishments this week.

Also visiting Boston: H. S. De Forest, of Hitchings & Co., New York.

OBITUARY.

HENRY A. GANE.

Mr. Henry A. Gane died at his home in West Newton, Mass., on August 9, in his 87th year. He was a successful Boston merchant of rare integrity and character but retired from business about twenty years ago. He erected a small greenhouse for his own pleasure, and being an ardent lover of horticulture has spent there his leisure moments in the happiest manner. Chrysanthemums were his especial pets and he became an ardent enthusiast in their fertilization, raising many beautiful varieties only a few of which are known to the commercial world. Two silver medals and other proofs of honorable recognition at the Massachusetts Horticultural Society's exhibitions and certificates of merit from the National Chrysanthemum of England and the Chrysanthemum Society of America were among his treasures. His productions he always gave away to his friends. One only did he dispose of commercially, the peerless Mrs. Jerome Jones, and that only after long persuasion. Visitors were always welcome and he never tired of showing his pets and explaining in his kindly way the mysteries of their production. Mr. Gane was a native of Frome, Somersetshire, England.

Philadelphia.

CANNAS. — CROTONS. — COMPARING NEW CANNAS.—THE STOCK OF FLOWERS — BUSINESS STILL POOR.—MISCELLANEOUS ITEMS.

Cannas are now beginning to assert themselves. The copious rains of late have been very favorable to their growth and the various collections in the neighborhood of this city are worth coming some distance to see.

Robert Craig has a fine collection of up to date varieties, which by the way to have complete requires one to be on the alert all the time. A row of Austria at the back and another of Mrs. F. Rogers in front makes a beautiful border on top of the terrace on the Market street front of his place. The latter variety Mr. Craig thinks the best American canna to date. It took the first prize at the New York Canna Show and the judges made no mistake. It is best described as a magnified and improved Mme. Crozy. Mrs. F. Rogers and Columbia, both American seedlings, show that we can produce varieties equal to any raised in Europe. In fact if the French are to retain their lead in cannas they must send better stock to America than that of the past few seasons. Mr. Craig's crotons that are to be seen at the convention exhibition are very fine. They are finer than anything we have ever seen in the same sized pots. He will also have samples of other plants taken from his general stock.

Mr. Blanc has a number of new cannas that are wonders in color, form and size; one of the Crozy type is immense, a single flower more than covering the crown of a large straw hat. He says that some system of nomenclature will have to be adopted soon as the canna is fast getting to be as bad as the carnation and chrysanthemum in the duplication of names.

The H. A. Dreer & Co. has adopted a novel plan by which to compare the new cannas with existing varieties. Their collection is one of the largest in the country and they have planted all the yellows, reds, etc., in separate color blocks, so that their respective merits can be seen at a glance.

The stock of cut flowers is getting a trifle better; some of the houses planted early are getting a growth on and the hustling grower is sending around the top shoots whenever they show a little bit of color on the end. We imagine it is not much trouble to cut these but when it comes to selling that is another story. New Beauties are appearing but are deficient in stem and many other respects. Kaiserins, Meteors and La France are about the best teas, although Thomas Foulds has a few of his midsummer Brides and Maids that are as fine as some growers can get them at any other season.

THE LATE H. A. GANE.

Asters are now plentiful enough for the fakirs and those bold enough to tempt dame fortune are parading Chestnut street with their baskets. From 50 to 75 cents per hundred is the price, with a few extras of the Semple brand bringing a dollar. Gladiolus and tuberoses bring $2 to $3 per hundred stalks. Carnations are so poor now as to be hardly worth mentioning.

Business is about as usual, very poor, an occasional funeral order livening things up a bit. This may sound a trifle incongruous, but the broad smile of satisfaction that follows the taking of a large order at this season is not dampened in the slightest because it happens to be of the mortuary kind.

Edward Reid, one of our hustling commission band, has just returned from a trip through the state where he has been the past week, looking up his customers and consignors. Everybody is expecting and looking forward to a good business the coming season. He was much pleased with the Pittsburg brethren and said they were a progressive and thoroughly up to date lot of boys. Their stores looked inviting and he saw quite a few flowers that were not handled here at all, notably Japan lilies and fine asters. He saw asters of the Semple variety that measured four inches in diameter and with stems thirty inches long; these sold readily at $7 per hundred.

John Dick, Jr. had the misfortune to collide with another bicyclist while riding his wheel down Eleventh street last Monday evening and was severely injured being thrown heavily and breaking his collar bone, dislocating his shoulder and it is feared, injuring himself internally. The army of bicyclists in this city has assumed huge proportions. By actual count one hundred wheels a minute pass Horticultural Hall on Broad street going both ways This is the average travel on a pleasant summer evening there being no extra attraction except the fine asphalted street.

William Hageman, of lily of the valley fame, 28 South Third street, is an exporter as well, and had placed with him the past week an order from Germany for 4,000 American bicycles, which is probably the largest order ever received from that country for American wheels.

The wife of David Cliffe, of Germantown, died August 6, after a lingering illness and was buried last Monday afternoon.

M. Rice arrived in town last Wednesday looking much improved. His European trip seems to have benefited him greatly and he says that with his improved and largely augmented stock he is going to hustle as he has never done before. K.

New York.

BUSINESS SLOW.—A BIG CROWD FOR PROVIDENCE.—A NEW WHOLESALE HOUSE.—BITS OF NEWS.

There is little going on in the city that is worthy of the name of business this week, and no discernable prospects for any immediate change. There is nothing to detain those who are inclined to make the trip to Providence and a large crowd is sure to go next Monday evening. All arrangements have been satisfactorily completed by the local committee. A big delegation will come from Philadelphia and it will be a hot time on the old boat that night unless all signs fail.

Roses sell more readily than at last report. American Beauties are in brisk demand. Carnations are improved in quality, the white ones being disposed of satisfactorily as a rule. Colored asters are the worst stock in market. They are immovable at any price. White asters are the only ones that sell and they go decidedly slowly.

Still another wholesaler. The latest addition to the lengthening list is McDonald & McManus. They have opened up at 50 West 30th street.

Johnnie Weir has gone to East Quogue for a well-earned vacation.

Stock and fixtures of F. E. McAllister Co., were disposed of at assignee's sale on Tuesday, August 10.

Visiting New York: W. R. Smith of Botanic Garden, Washington, D. C.

Chicago.

NO CHANGE IN MARKET.—BEAUTY AND KAISERIN LEAD IN ROSES.—GREATLY INCREASED SPACE DEVOTED TO BEAUTY FOR COMING SEASON.—YOUNG ROSE STOCK IN FINE CONDITION.—AMONG THE GROWERS. —OFF FOR PROVIDENCE —NEXT TRIP OF FLORISTS' CLUB.

The market is much the same as reported for the week previous. The demand is about equal to supply as to best quality rose stock and carnations, but the cut of roses is now rapidly increasing, and at the present rate will soon overtop the usual summer demand, which is not likely to increase much for another two months. Beauties and Kaiserin are still leading. The flower is improving in size and length of stem. Kaiserin is now exceptionally fine.

A recent trip through a number of the leading establishments discloses the fact

that a rapidly increasing area is devoted to this popular summer rose. Reinberg Bros. alone have twenty houses 20x90 planted with this variety. Bassett & Washburn also devote a large space to them as do a number of smaller growers. Beauties also are planted in much larger quantities than ever before. Not only have the leading Beauty growers increased their bench room but quite a number of others who, having in years past tried to grow this rose without success, are again at it, in a number of instances a special house being built for the purpose. The probabilities therefore are that with good success on the part of the growers, the market should be amply supplied.

On the whole the young rose stock averages much smaller than at the corresponding date last season. This is probably owing to the fact that the bulk of the planting was done later than last year. The weather the past two weeks has been very favorable, however, to the young stock which is pushing forward at a great rate and is promising well with few exceptions. The bulk of space, as during several seasons past, is given to Brides and Maids. These two varieties, at least in our market, rule supreme in the winter season.

Meteor is again planted in large quantities and is second only to the two first named in their class. Meteor, however, is sometimes erratic. In winter, of course, we are used to see it come more or less "bull-headed" at times but we are not looking for that kind of bloom now. Mr. Kirkham, of Maywood, who is operating the old Rockafellow place, has a house of this rose planted early which is in as fine a condition as a house can possibly be, but the cut yields fully 90% of the most pronounced type of bullhead. These are not cut from the strong bottom shoots, as might be supposed, which come invariably in this shape, but from side shoots. Mr. K. is unable to account for this, as the stock is planted in the same kind of soil used in former years; besides Mr. K. is noted as growing this rose at its best. Testout is practically discarded; a few growers who have still clung to it for the last few seasons have thrown it overboard, not but that the rose is selling well in the market, but it don't pay. La France, generally considered a back number in our market, is still grown to quite an extent by the Reinbergs. At other establishments, however, it is notable by its absence. Perle is planted in usual quantity at a ratio of about 1 to 5 as compared with Brides and Maids. President Carnot is having a trial at a number of establishments. The rose is making a fine growth and flowering freely; the bloom, considering the season of the year is of very good quality. It promises to be successful for our locality. How it will take on the market is a question to be decided later.

All aboard for Providence. Penna train leaves Union station at 10:30 a. m. Sunday, August 15 (tomorrow). It's a trip you ought not to miss.

The Florists' Club will visit the establishment of Messrs. Bassett & Washburn, Hinsdale, Ill., the afternoon of Saturday, August 28, taking the train leaving Union station at 1:30 p. m. A very large amount of new glass has been added to this establishment this season and other improvements made, and the members will undoubtedly find much of interest to inspect.

Mr. Thos. Hopkinson has taken a position with Messrs. Bassett & Washburn at Hinsdale.

NO CHANGE IN BUSINESS.—SPECIAL MEETING OF THE CLUB.—ROUTE TO PROVIDENCE.—THE PARKS.

The trade situation remains about the same, very little doing now, but many believe the fall and winter trade will be fully up to the standard, and if so the business for the year will be a very good total, considering the times.

The Florists' Club held a special meeting on the evening of the 5th inst. and concluded arrangements for the trip to Providence; they leave on the morning of the 12th in a special Eastlake coach on the B. & O. R. R., arriving at Baltimore in the evening, stopping there until Friday evening, when they take the boat for Norfolk, Va., and will arrive at Providence on Monday morning, the 16th inst. No business of any importance outside of the trip arrangements was transacted. Mr. Edward Reid, wholesale florist of Philadelphia, who was a visitor to our city, attended the meeting and favored the club with a few remarks.

Mr. Wm. Falconer, superintendent of Schenley Park, has returned from a short trip east and is hard at work again pushing the permanent improvements in the park. The trees and shrubbery that were planted in the spring are all doing well.

Reduced Rates from Western Territory.

The Western Passenger Association has granted the rate of one and one-third fares for the round trip to the Providence convention. This extends the above rate to practically all territory west of Chicago and St. Louis. In purchasing tickets a certificate must be secured, which after being countersigned at Providence will entitle to one-third fare returning.

Meadville, Pa.

Mr. Aug. Krueger has commenced building five houses, four of which intended for roses and carnations, will cover each 75x20 and the fifth one for violets, 75x24. The houses are being built with a view to convenience and durability and will be equipped with all the modern improvements. Mr. Krueger likewise contemplates rebuilding his store and conservatory located on the corner of Market and Center streets.

Among other things, Mr. Krueger will grow violets on a more extensive scale, the demand for these increasing from year to year. HOMO.

C. O. D. Shipments.

It is reported that several C. O. D. shipments of plants to Ishpeming, Mich., have been first refused and afterward bid in for the express charges.

LOUISVILLE, KY.—Fire damaged the residence of Jacob Schulz the florist, August 3.

WAYNESBORO, PA.—Mr. Henry Eichholz reports that a striped canna has originated on his place.

MERRILL, WIS.—Mr. N. Greiveldling, formerly of Sparta, Wis., has purchased land here and will build two greenhouses 18x100 each. He will use 16x24 glass, butted.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

SWEET CORN of the later kinds is said to be short.

VISITED CHICAGO: J. C. Robinson, M. G. Madson.

MR. W. ATLEE BURPEE left London for the Hamburg Exposition July 21.

MRS. BARTELDES, who has been ill in Wisconsin, has improved and Mr. B. will return with her to Lawrence next week.

NAVY, Mediums, Limas, Red Kidneys and other food beans have advanced materially in price the past week. Mediums over 30%.

WHILE SEVERAL varieties of peas will be very short and already others have been carried over in such large lots that there will be no decided general advance for the present.

IT IS REPORTED that the government will purchase seeds in packets from seedsmen in various sections of the country in a similar manner to the plan followed last season except that the patronage will be more evenly distributed.

THE California onion seed crop will average about 60% in yield with a reduced acreage and quality not up to average. So much has, however, been carried over there will be no shortage of seed. It is more than likely that the acreage will be still further reduced the coming season.

BOSTON.—Nathaniel P. H. Willis, who served as a salesman with Joseph Breck & Sons for sixty-four consecutive years, prior to August, 1894 died in Chelsea on Tuesday, the 31 instant, at the ripe age of 87. Mr. Willis is believed to have been the oldest salesman in this country, and certainly, the oldest in any seed store. He was the son of Charles Willis, well-known at the beginning of this century among the farmers of Massachusetts, and is descended from Charles Willis, described as a Puritan of considerable distinction. He began work as a boy in his father's shop, and in a short time was put on the salesfloor of Jos. R. Newall, dealer in seeds and agricultural implements at 108 State street, Boston. This business was soon after conducted by the firm of Jos. Breck & Sons, then in the seed business, and publishers of the *N. E. Farmer*. With this house Mr. Willis remained until August 1, 1894.

USE THE
Brown Bag Filling Machine

Shall you be in line for a machine for putting up your seed

THE COMING SEASON?

Exact measure. Time, space, supervision and money saved. The machine does the work of ten girls. The economy in seed alone is more than the entire cost of putting up.

A special attachment for large and full packets. circulars and information, also for BAG MAKING MACHINES, address

THE BROWN BAG FILLING MACHINE CO.,
Fitchburg, Mass.

Buffalo.

FINE WEATHER —ABUNDANCE OF FLOWERS EXCEPT CARNATIONS.—SUMMER ROSES — TRIP TO PROVIDENCE.—MEETING PLACE FOR NEXT YEAR.

Very fine weather has been favorable for all kinds of work, and business too if there was any going, but there is little of that. There is an abundance of flowers to meet all demands except good carnations. They are about gone as nearly all growers have let the plants dry up or have thrown them out for the new crop, and it's nearly time. Now he that lets a few hundred of the leading varieties go up to flower in the field and protects from early frost, will be very much in it for the next two months.

Mr. Kasting is receiving fine roses from the Oakwood Rose Gardens, of Oil City. Our national treasurer, Mr. Beatty, makes a specialty of roses during the hot months and has the field largely to himself.

As the time draws near for our departure to Providence we are anxious to know how many there will be in the party. There will be a few of us anyway, but it is likely they will go on the installment plan. Several will leave Sunday night and have the day in New York, joining the crowd on the boat. We do look forward to that ride and its concomitants.

At this writing I am afraid Buffalo will not be represented either on the bowling team or the shoot. Well, if it's to be that way it will allow the intellectual members of the Buffalo delegation more time for the serious business of the convention, which is so congenial to their taste. We have not yet received that beautiful challenge cup from the west. We hope, however, to get it here in time for us to display it on the boat. I will bet just three good cigars that the cup finds a resting place after the convention in the dreary wastes of Flatbush. I would prefer that this innocent wager should be with Mr. George Anderson, of the Darby Road, Philadelphia, Pa.

A good deal of talk on the journey to Providence and during the early days of the convention will be on the question, "Where are we going next year?" It has not been the custom to boom any city for our meeting place till we all get together but there is, I believe, no law against it.

We have an invitation to go to Milwaukee. I have been there and walked all around Pabst's brewery, on the outside. No doubt there is as good and warm-hearted a set of men in Milwaukee as in any city of its size, but is it not too far away from the great majority of our members and the horticultural centers? We have none too great an attendance when held in such cities as Pittsburg and Cleveland, and they are eastern cities as compared with Milwaukee. I have an ideal city in my mind and am almost authorized to say to the convention, "Come to our beautiful city and we will make you warmly welcome." That city is Detroit, a far more beautiful town than many eastern people have any idea of. It is chiefly noted for two things. It owns the beautiful Belle Isle Park and is the birthplace of Harry Balsley, besides claiming among its citizens Governor Potato Pingree, Philip Breitmeyer and many other more or less famous men. Ladies and gentlemen, it is an ideal city for our meeting place. It is situated geographically grandly, and is a beautiful city in which to spend a few days of summer and incidentally to attend the sessions of the S. A. F. convention. W. S.

JOHNSON & STOKES.

Painting Gutters.

What had we better do with a well joined 2-inch plank cypress gutter between two houses. Planks were well joined with white lead when built a few months ago, and so tight that caulking was impossible, had been painted white several times and didn't leak till a dry spell came on which shrunk the planks.

Some told us to use pitch, and some said use liquid cement washed over thinly, but we would like to be certain before applying any one thing to it.

PENNSYLVANIA.

I have half a dozen gutters made of cypress plank 1¾ inches thick and 12 inches broad with the edge strips about 2 inches high. They have been used some of them for the past 5 years and are entirely satisfactory. And what an improvement they are over the old tin gutters we used to have. We not only threw away money on the tin, iron or zinc, but we rotted out the wood beneath the metal, for to keep the water from getting below the tin no man yet was clever enough.

I have used on one gutter coal tar on the top of paint and sprinkled rough sand on when warm. And on another I used a mixture of asphalt, which may not be procurable everywhere. It has been a water tight gutter but I don't like either any better than I do a good heavy coat of white lead. The gutters should have a good coat every year, and choose the driest time to apply it. WM. SCOTT.

FORT WAYNE, IND.—Miss Flick has returned from a pleasant and profitable trip through California, Oregon and Washington.

FOND DU LAC, WIS.—The wife of Mr. E. Haentze is seriously ill, and this will prevent Mr. Haentz, from attending the Providence convention.

SHIREMANSTOWN, PA.—The *Journal*, of Mechanicsburg, Pa., in its issue of July 31, prints a very complimentary notice of the greenhouses of John F. Rupp, of this place.

New Orleans.

Hot weather, poor flowers, no business is the general complaint from all your correspondents, and I can assure you that from N. w Orlear s you will not hear much better. I do not see how we can just now find a few flowers alive when a funeral design or a weddlng bouquet is to be disposed of. This state of busIness will certainly continue till towards the first of November when we will have our All Saints' Day which is the same as your Decoration Day of the last of May, and I hope at that time that I will be able to report something more interesting.

At the market, plant business is also at a stand still although some florists seem to want to go to the market later than ever before. But it looks as though it is more the desire on their part to get rid of the plants than the willlngness of the customers to buy them. I said "to get rid of" because the most of the plants are sold at ridiculous prices. Let us hope for something better when we get out of the 90°. Yesterday we had 99° in the shade.

A few weeks ago Armand Kerlec, seedsman at 827 Decatur street, retired from business selling out to Snaer, Schindler & Van Geffen. J. A. Schindler was formerly with C. W. Eichling. M. M. L.

PEORIA, ILL.—Geo. W. Souster, nephew of Geo. Souster of Elgin, Ill., died at the Cottage Hospital, August 6, of blood poisoning resulting from colored socks. He was born in Northampton, England, 19 years ago, and came to America 4½ years ago, going to Elgin, where he was for several years In the employ of his uncle. For the last two years he has been with Cole Bros. of this city. He was well liked and his unfortunate death is deplored by many friends. The remains were shipped to Elgin and interred by his uncle.

TO WIDE AWAKE FLORISTS:

Have you ever tried evaporating liquid tobacco to kill green flies in greenhouses? It would pay everyone who has not already tried it to give the process a trial. It is generally well known among rose growers that the old style of fumigating by burning tobacco in its various forms is ruinous to the flower crop of such roses as Catherine Mermet, The Bride, Bridesmaid and those types. The plan herewith recommended is cleaner, more convenient and does absolutely no injury to any rose buds, nor to the plants.

Our experience has taught us to use at least six (6) of our evaporating pans in a hundred (100) foot house. At first when we put this plan into operation we thought of evaporating tobacco juice as a preventive only, the same as the old and somewhat untidy style of strewing tobacco stems on the paths and under the benches; but we find that by using the number of pans to a house as above indicated it absolutely kills the pest, and there is hardly any perceptible smell in the house, and the roses retain their fragrance without taint or blemish.

These pans are threaded to be attached to an inch and a quarter pipe, or by the use of a **bushing** any smaller sized pipe may be attached. Our pan was awarded Honorable Mention by S. A. F. at Cleveland, O., in 1896.

TRY AT LEAST ONE HOUSE.
Price $1.25 each pan. For further particulars write

CONVENTION ARRANGEMENTS PERFECTED. —BRILLIANT PROSPECT. — DELEGATION FROM NEWPORT CLUB VISITS THIS CITY FOR CONFERENCE —S. A. F. BADGE IN PLANTS.—ACTIVE DEMAND FOR EXHIBITION SPACE.

The long-looked-for convention is at hand and many there are who are anxious to see the finish and to realize the pleasures and enjoyments to be found only in Rhode Island. At the last meeting of the executive committee the reports were more than favorable and all expressed great satisfaction at the brilliant prospect before us. The committee have worked together, no friction or discord has manifested itself, the only object being to bring credit upon the club and help to establish a reputation that will last many years after the present membership has passed away.

A delegation from the Newport Club visited this city to confer with the Providence Club and to arrange a final program for the entertainment of their guests while in their city. They were shown about Providence and the route was gone over and some of the places of interest were visited. They also expressed themselves much pleased with the program as arranged by the Providence Club. We are assured of one thing which is that when we get the visitors to Newport by the sea they will find the pleasures in store for them there will prove to be a fitting climax to the week's experiences.

The S. A. F. badge of red and yellow alternanthera at Roger Williams Park is all right. Superintendent Fitts has taken great interest in this convention and will show the visitors something worth seeing.

Superintendent Chappell reports a very active demand at the eleventh hour for exhibition space. Many of the late comers will be obliged to defer their good intentions to exhibit their goods until the next convention at Omaha or some other place remote from the eastern circuit.

Death has again visited the family of Wm. Appleton, Jr. He buried his father on the 8th, aged 68 years. Again our hearts go out with sympathy for him in his bereavement.

This is the last call. Don't forget the duty you owe to the craft, and remember the pleasure you will afford us by attending the convention. LITTLE RHODY.

NEW YELLOW CARNATION
MAYOR PINGREE.

BETSCHER BROS., Canal Dover, O.

Mr. FRED BREITMEYER,
MT. CLEMENS, MICH.

DEAR SIR:—Regarding the Mayor Pingree Carnation, I have traveled extensively the few years past and have viewed nearly all the new varieties introduced in their original habitat, but none have pleased me so well as M. P. as to growth, freedom of bloom; in fact nearly every essential factor that goes toward making the perfect carnation. I have crossed it with many other kinds, and for crossing it seems admirable. We have some seedlings that doubtless will give us something very fine, if vigorous growth is any criterion upon which we may pin our hopes, etc.

Any one who does not secure some plants of it will make a mistake, doubly so to those who are in the fascinating part of plant breeding. Thanking you for the plants you sent, etc.

CHAS. BETSCHER.

P. S.—As a pot plant I know of nothing that has the stamina of Pingree.

THE CORNELL UNIVERSITY.
College of Agriculture,
L. H. BAILEY, Prof. of Horticulture,
ITHACA, N. Y.

Mr. FRED. BREITMEYER,
DETROIT, MICH.

MY DEAR SIR:—I am greatly obliged for the photograph of Carnations, which is very good. We are growing a picked lot of Carnations this year, and we have a pretty good show, considering that this is one of the dullest climates in the North. Of all the varieties which we have, the Pingree has attracted the most attention. It is the best yellow which we have ever grown, and if it holds up everywhere as it has with us it seems to me that it is a coming variety. The flowers are good shape, long keepers; the plant is exceedingly strong, and the stems are long enough and strong enough to satisfy John Thorpe's idea of a typical flower.

Yours very truly,
L. H. BAILEY.

JACOB W. MANNING,

THE READING NURSERY, ESTABLISHED 1854.

Reading, Mass.

St. Louis.

WEATHER COOLER. — STOCK BETTER.— TRADE SLIGHTLY IMPROVED.—STILL A SCARCITY OF FIRST GRADE FLOWERS.— BEDDING IN THE PARKS.—A NEW PARK PROPOSED —BOWLING.

There has been quite a change in the weather, which is much cooler, and the welcome rain of last week has had the effect of livening things up wonderfully. Trade, however, or what there is of it, remains the same, the only events of any importance being several large funeral orders which livened up the business considerably the past week.

The supply of good stock was short of the demand while the poorer stock is still plentiful with little demand at low figures. Roses are looking a little better, owing to the cool weather. The best of the Meteors, Bridesmaids, Kalserin are bringing $3 and $4, seconds $2. Perles were sold at from $2 to $3. Carnations are only fair. The best of them were Scotts and bring $1. Sweet peas are very scarce and almost out of the market. Asters in all colors are abundant and cheap. Hardy hydrangeas are plentiful and large fine heads bring 5 cents each. Gladioluses too are a glut. Tuberose stalks are good, price $3 to $5. Smilax still goes begging at a low price.

The outlook for better quality of stock in the near future is promising. The young rose stock is in very good condition. The carnation fields also look their best. Violets at some of the places are not looking so well having been more or less affected by the dry weather.

The bedding in Forest Park looks well and is very attractive. There is more of it this year than ever before and Superintendent Pape reports that it will be increased from year to year.

Tower Grove, Lafayette, Burton and the other parks, are equally as attractive as the large one. Dr. Cleveland McAfee called the attention of Mayor Zirgenheim to the fact that two blocks of ground on the levee at the foot of Olive street should be set aside as a river front park. The Mayor said we should have more parks, and I shall do all in my power to encourage the movement by which the city shall get them. The park will be known as Riverside Park.

The bowlers had a nice cool evening Monday night and it brought out a full attendance. In the three games rolled Carl Beyer was high man with 553, Kunz second with 542 and Sanders third with 527. High single score was by Beyer, 242; Kunz second, 240; and Kuehn third; 192. Frank did not have any poodles which surprised everybody but he has a new style of rolling which he claims will keep him from making so many poodles. We will watch you next Monday Frank. J. J. B.

OUR PANSIES same high grade that has made them famous over 15 years. We continue adding the world's best and select yearly choice plants for our seed. Plants, $5.00 per 1000, 75c per 100. Seed, $1.25 per ¼ oz.

SWEET PEA MEETING—MANY VARIETIES EXHIBITED.—LARGE ATTENDANCE.—THE TARIFF.

The sweet pea meeting held by the Horticultural Society was crowded to the doors, and every chair that could be scared up in the building was in requisition. On a large table in the middle of the room was a collection of 114 different kinds from Mr. Edwin Utley, and some, including several perennial sorts, from Manton Bros., of Eglinton. Mr. Utley read a most interesting and practical paper on the origin, history and culture of the sweet pea, which was listened to most attentively, and had to answer a great many questions. After the essay and discussion the flowers were more closely viewed by the crowd and then distributed, every one going away pleased and satisfied.

A committee was appointed to report on some varieties not yet distributed which were sent to Mr. Utley for trial by a California firm.

Mr. Manton reported progress for the tariff committee. The government does not seem to have made things very satisfactory, it appearing that somebody got at them at the last moment before the tariff bill was passed and induced them to change it to suit themselves. The committee was instructed to continue their efforts to get the tariff changed according to the unanimous desire of this society and the trade.

Weather fine, with occasional rains, good growing weather for horticulturists, not so good for the farmers. E.

W. K. HARRIS

calls the attention of his many patrons to his unusually fine stock of the following plants:

Council Bluff, Ia.

McPherson & Reed are making a few alterations. A part basement formerly used for sweet potatoes is being glazed and will be used as a palm house hereafter.

J. F. Wilcox has built five new houses 24x130, all modern throughout. The benches in three of the houses, which are to be devoted to roses, are entirely of oak, the other two will be filled with carnations. The new houses are glazed with 16x24 double strength glass, and the materials used were of the best, no expense being spared to make these the best houses in this part of the country. In building Mr. Wilcox has arranged for extensions to double the amount of glass just erected, as soon as business will warrant. A new violet house is under construction, 12x110. The large house formerly used for carnations has been entirely "gutted" and will be devoted to smilax and asparagus. A brick boiler room about 40x50 with an 85 foot brick smoke stack is another addition, also a 90 horse power boiler. Mr. Wilcox has control of the Foster & Son plant, which is devoted to vegetables and roses for summer blooming. G. R. H.

Erie, Pa.

With a range of houses filled to overflowing with the finest varieties of roses, carnations, chrysanthemums and violets, all of which look healthy, clean and well grown, Mr. Henry A. Niemeyer will be well prepared to meet all ordinary and extraordinary demands for flowers during the coming season. Mr. Niemeyer's chrysanthemums especially promise to surpass any of his previous efforts, both as to quantity and quality. Quite a number of the "very latest" have been introduced and are grown, both to the single stem and bush plants.

Mr. John Frost has leased a valuable piece of ground and has commenced building three houses, each 70x20. He is also building a residence adjoining the greenhouses.

Unless the unexpected happens to deter him, Mr. Niemeyer will join the Buffalo delegates and accompany them to Providence. HOMO.

TAUNTON, MASS.—Miss Ann Husband, elder member of the late florist firm of A. & M. A. Husband, died on July 30, aged 81 years.

GLOVERSVILLE, N. Y.—E. W. Giddings has leased his greenhouses on North Main street to J. E. Loeben, who will continue the business here.

BEVERLY, MASS.—The Beverly Improvement Society proposes to hold a flower show at the City Hall from 2 to 10 o'clock p. m., September 2.

Dreer's Invitation to the Delegates

OF THE

SOCIETY OF AMERICAN FLORISTS.

Florists visiting the Convention to be held in Providence, August 17, 18, 19 and 20, 1897, will find our

Exhibition of Decorative Plants,

Such as **Palms, Ferns, Araucarias, etc.,** to be the most complete and comprehensive display of the kinds and sizes that we grow in quantity. There will also be an exhibit of Seasonable Bulbs.

Our representatives, Messrs. Walter Mott and John A. Ruppert will be in attendance, and pleased to show stocks, furnish prices and give any information desired.

Delegates passing through Philadelphia or New York en route to Providence will find it to their advantage and interest to call at our Nursery in Riverton, New Jersey, and personally inspect stocks that are admitted to be the best in the country. We show six Acres of decorative plants under glass, an object lesson to prove that home grown plants sold at moderate rates are what the people want. Time cards and information how to stop over, cheerfully mailed.

GEO. J. HUGHES.

Berlin, N. J.

Always mention American Florist.

Sharon, Pa.

It is hustle and bustle with Mr. M. I. O'Brien, who seems determined to get through with the general repairs about his plant and put his houses in perfect order ere leaving for Providence. "There is a deal of satisfaction," he remarked, "to realize that while you are enjoying yourself at a convention, things have not been neglected at home."

Mr. O'Brien will join the Pittsburg delegates, 30 strong, whose course of travel, both by land and sea, proves that the boys are determined to have a good, jolly time.

Mr. John Murchie is not quite so fortunate as to be able to attend the convention. It is a case of "business before pleasure." In addition to a good deal of work on general repairs, such as renovating benches, painting, etc., he has now in course of erection a house covering 150 x20, as well as a more commodious potting shed. Both are being built with a view to convenience and adaptability.

Florist McConnell is on a fishing tour and at last accounts they were doing quite well, I mean the fish in the river. Mr. McConnell has repainted and overhauled his houses. HOMO.

Massachusetts Horticultural Society.

Number III of the transactions of the Massachusetts Horticultural Society for the year 1895 has been received. It is a list of the accessions to the library of the society during the year. The list enumerates 650 volumes, giving number of pages, size and thickness of book and name of donor. A communication from the President, Francis H. Appleton, accompanying same is as follows:

The Massachusetts Horticultural Society was incorporated in 1829, "for the purpose of encouraging and improving the science and practice of horticulture." The chief means by which this end has been sought are horticultural exhibitions, the library, and lectures and discussions on subjects connected with horticulture. Among these the library stands prominently as a source of scientific and practical information on horticulture, yet it is felt that the actual usefulness of the library is less than its possibilities, and the object of this circular is to increase its usefulness. It may not be generally known, even to the members of the society, that the library appears to have attained an extent and value exceeding that of any other horticultural library in this country, and excelled by few in the world. The accompanying list of accessions to the library during the year 1895 will give some idea of the rapidity with which it is growing, which is greater than ever before.

Though only members of the society can take out books for home use, all who desire are cordially invited and welcomed to consult its books in the library room, and all such will find a great convenience in its central location—at Horticultural Hall, No. 101 Tremont street, Boston.

THE Royal Agricultural and Botanical Society of Ghent, Belgium, will open its 14th International Horticultural Exposition April 16, 1898. Copies of the prize list and further details may be had by addressing the secretary of the society, M. Fierens, Coupure 135, Ghent, Belgium.

It costs 4 cents for each 600 feet of floor space.

Kill the Bugs! AND SAVE THE BLOOMS

Quickly Does It.

BOUGAINVILLEAS.

GLABRA (?) AND GLABRA SANDERIANA.

These grand plants are bound to become **Leading Decorative Subjects.** The beauty and durability of their bloom (bracts) combined with their protracted flowering period—extending almost through the Florists' Season—make them specially interesting and attractive objects. Their freedom and durableness of bloom with quick recurrence of same may be truthfully described as wonderful. Our plants in past two seasons have flowered almost **continually** from Christmas to July, entire **heads being** available for late June decorating.

Both varieties are strong, rapid growers, **very easily** handled, not subject to any insect pests and not at all particular as to temperature or treatment.

Every florist will want them, if for Easter plants only, as the ease and certainty with which they may be flowered, coupled with their other qualities, leave few rivals for that season that can be handled with so much satisfaction and profit.

For some opinions of the merits of these plants see

TRADE BETTER.—LAWN PARTIES MAKE UNUSUAL DEMAND FOR FLOWERS.—MR. DUNBAR TAKES AN EXTENDED TRIP.—FINE COLLECTION OF TREES AND SHRUBS AT HIGHLAND PARK.

In the month of August no florist can or will expect much demand for cut flowers. Trade is generally very slow at this time of the year and flowers are very low in price, yet our store men manage to dispose of quantities of flowers every day in the week, though the profits on these sales may not be very large. On an average, business this summer has been rather below the usual, but for the last few weeks the demand has increased to such an extent that most of the retailers are really surprised. Lawn parties are in fashion more than ever and cut flowers are largely employed on such occasions. They do not call for very elaborate decorations nor for very choice or selected flowers, but quantities of showy and bright colored out door stuff of every description are used extravagantly, creating a heretofore unknown demand for common summer flowers. The market, however, is always well supplied and there is no scarcity of such stock.

Mr. John Dunbar, assistant superintendent of parks, is off on his annual vacation, visiting New York and Brooklyn parks and several celebrated private places on Long Island; then he will travel up the Hudson and stop at many of the handsome villas and pleasure grounds in which the country abounds and proceed to view the parks of Boston and the celebrated Arnold Arboretum. Mr. Dunbar is specially devoting his energies to rare trees and shrubs and is a well known authority on them.

At Highland park he has planted a large and choice collection of shrubs, which is equal if not superior to any other in the country, but nearly all of them are small yet and young, though growing vigorously now, and in a few years we will see all of them in perfection. Mr. Falconer, of Schenley Park, Pittsburg, on a recent flying visit, expressed his astonishment at finding so great a variety of rare shrubs doing well here in such a limited space. A place can be found here for most anything, the deep ravines affording shelter for the more tender species and on the hills and plains the hardier sorts find a congenial home.

K.

Kingston, Pa.

Despite the season, or the proverbial midsummer dull spell, I found Mr. Geo. W. Carr exceedingly busy during a recent visit to Kingston, the occasion being an elaborate wedding decoration. Verily, there is no rule without an exception. Palms, Asparagus plumosus, sweet peas and the humble field daisies were artistically blended, the effect being most attractive. A feature was a huge marriage bell composed of daisies and fringed with asparagus.

Mr. Carr's houses underwent some repairs and are now in splendid condition. His general stock looks fine and well grown. HOMO.

AT THE CONVENTION

The central and most imposing attraction will be the display of

H. BAYERSDORFER & Co.

We want every Florist who visits Providence on this occasion to give us a call at the Exhibition Hall and let us show them our goods and prices. We shall have a number of novelties never before shown and many new and useful supplies for those who do business in modern style. For such we have the right stock at prices that cannot be beaten.

=EVERYTHING IN=

BASKETS, JARDINIERES, DRIED FLOWERS AND GRASSES,

Inscriptions, Cycas Leaves, Cape Flowers, Metallic Designs, Immortelles, Moss Wreaths, Artificial Flowers, etc.

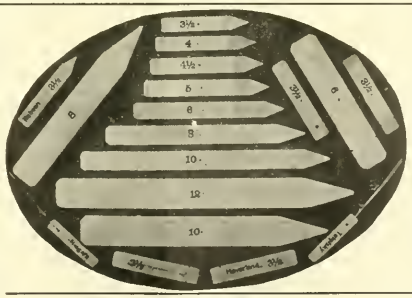
and the finest Wheat Sheaves in the world. A complete catalogue and price list to every applicant.

H. BAYERSDORFER & CO.,

56 N. Fourth St. PHILADELPHIA, PA.

AT MUSIC HALL, PROVIDENCE, R. I., AUGUST 17-20, 1897.

"ROSE LEAF."



The BEST for ALL FLORISTS. WHY?

BECAUSE not dangerous to flowers.
BECAUSE not dangerous to human life.
BECAUSE the most economical and the cheapest.
BECAUSE being a thick extract its vapor has more SUBSTANCE, and therefore hangs longer in the greenhouses than does the vapor of any other insecticide on the market.
BECAUSE the above fact means that the "ROSE LEAF" vapor not only knocks the insect down, but hangs in the house long enough to get the "after-effects" necessary to kill it.
BECAUSE the most effective.
BECAUSE the best all-round insecticide on the market. FOR SALE BY ALL SEEDSMEN.

For Free Booklet write to **LOUISVILLE SPIRIT CURED TOBACCO CO., LOUISVILLE, KY.**

Omaha, Neb.

BUSINESS AT A STANDSTILL.—BUILDING AND REPAIRING.—VARIOUS ITEMS.

Business is at a standstill and has been for the past month. Funeral work has formed the greater part of the business. The extremely hot weather during the month of July has put the outdoor stock in a frightful condition. Sweet peas are a drug on the market; plenty of roses and carnations, but of an inferior quality. Roses are bringing 50 cents and carnations 25 cents at the highest.

A visit to the various houses finds the usual summer work in full blast, some building and making a few changes while others are putting in new benches. Several have their roses planted. 'Mums are looking fine and prospects are good for a large cut.

Lewis Henderson, of So. Omaha, is building a nine room residence joining his greenhouses on the west.

A Delanney, also of So. Omaha, is busi'y putting in new benches and a short extension to one of his houses.

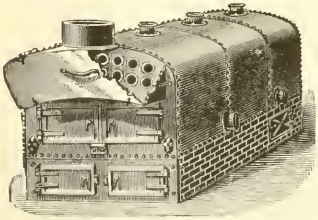
George A. Joslyn has commenced work on his private conservatories.

J. W. & E. E Arnold are putting in new benches throughout. J. W. Arnold is out on his usual summer tour of the mountains.

Hess & Swoboda are building two north and south houses and putting a new roof on one of the old ones. A new boiler and potting shed has also been erected.

Mr. Jensen, on west Leavenworth street, has a small house under construction.

Sam'l R Faulkner has put up an extension 16x56 to one of his other houses and has a violet and carnation house 12x36 under construction. Mr. Faulkner's son Will has been with the Hanscom Park conservatories since early last spring.



Mr. Spero, representing Chas. Z nn & Co., of New York City, was a pleasant caller last week.

Mr. Dole, of S. H. Dole & Son, Beatrice, Neb., spent a few days in looking over stock last week.

Mrs. S. B. Stewart is visiting friends and relatives in Chicago. G. R. H.

THE Pittsburg parks recently ordered $1200 worth of trees and shrubs from Elwanger & Barry, Rochester, N. Y. Director Bigelow rejected a slightly lower bid, holding that the standing of the above old established firm insured first-class stock and that under the circumstances their bid was really the most acceptable.

The Right Cypress for Greenhouse Material.

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we can not afford to jeopardize. We send out the best only.

boiler=value

There are many ways in which Steam and Hot Water Heaters may be cheapened without showing, to the unclothed eye, how it was done. We don't try to cheapen the boiler at the expense of the boiler itself. We couldn't afford to lose the good will of a single one of our boiler-users, or to disturb our own peace of mind. We try to make a man's boiler money buy more boiler value in our boilers than it can buy in any others.

THE REMAINING ASSETS of Sioux City Nursery & Seed Co., were sold July 30, realizing about $15,000. The seed house, grounds, good-will, supplies and a large portion of the stock were bought by the receiver of the Sioux National Bank, and he has requested E. S. Weatherly to take the management of it.

WEST GROVE, PA.—L. G. & H. G. Wilson have sold their greenhouse property, consisting of five houses and two acres of land, to Beitler and W. Brown.

THE PROVIDENCE CONVENTION.

Tuesday Morning Session.

The thirteenth annual convention of the Society of American Florists opened in Music Hall, Providence, Tuesday morning under most favorable auspices. The large hall had been most elaborately decorated for the occasion by the Providence brethren and the plants and flowers so freely used were of first quality throughout. An excellent orchestra supplied good music until the time for opening and nothing had been left undone to make the delegates feel that they were truly welcome.

The first session was opened by a few warm words of welcome from President Farquhar Macrae of the Florists' and Gardeners' Club of Rhode Island, who then introduced Mayor McGuinness. The mayor of Providence is a most pleasant speaker and was quickly in sympathy with his hearers. He expressed much gratification at being privileged to welcome to Providence the representatives of such an important body of men as the associated florists of America. He considered florists to be artists rather than mere business men and that their work was highly educational as teaching a love for the beautiful. He spoke feelingly of the various uses of the flowers and said that no man was thoroughly depraved who had in his heart a love for flowers. He closed by saying "May the memory of your visit to our city be as sweet as the fragrance of your own flowers." His address was received with long continued applause, and was responded to on behalf of the society by Mr. W. W. Coles, of Kokomo, Ind., who spoke as follows:

MR. MAYOR, LADIES AND GENTLEMEN OF PROVIDENCE:—It affords me great pleasure on behalf of the Society of American Florists here in convention, to respond to the warm words of welcome spoken by the honorable and highly respected mayor of this important, interesting and prosperous municipality. Taking everything into consideration, it seems to me that as a society we are very fortunate in having the privilege of meeting in this city, among other things, to enjoy the hospitalit[illegible]ich you so generously accord us, becau[illegible] of your promises to make it pleasa[illegible] us during our sojourn among you, m[illegible]ecat[illegible]th reputation which you su[illegible]ai[illegible]ad this direction.

The name of yo[illegible] city [illegible] cant—Providence—[illegible] at what our coming an[illegible] to have been providentia[illegible]e r[illegible] minded of the historical fact t[illegible] nis city has age and an interesting hi[illegible]ry more or less eventful. It is recorde[illegible]hat in 1776 you had a population of 4[illegible] souls, since the close of the revolution[illegible], population, like other commendable things worthy to be named and praised has increased steadily and substantially. Your city gives visitors the impression that you have much wealth, an evidence, possibly, that Providence has favored Providence. We observe that your manufactories are many and varied, and this city is a manufacturing centre of extensive commercial and industrial interests. Your silver ware found upon the tables of this and other lands tell us that your trade is extensive.

As we look upon your magnificent parks, public buildings, monuments, beautiful cemeteries, and your palatial homes, we are satisfied that many of you are in love with the beautiful, and hence, we are not surprised to find ourselves here, whose life's work it is to beautify and enrich life. We do not believe that flowers are trifles. Our observation is that "murderers do not ordinarily wear roses in their buttonholes and that villains seldom train vines over their cottage doors." Your many and well supported charitable institutions, after which other cities making large pretentions have patterned, speak of your philanthropy, generosity and benevolence. Where institutions of this sort are founded and flourish, are invariably the places where we like to live, build our homes and rear our children.

The high character of your incorporated educational institutions, including your public schools, is widely known, and they do speak emphatically of your culture, refinement and commendable enterprise. In certain respects your city is as ancient Athens is said to have been, full of sights worth seeing and valuable information,—a good place in which to learn splendid and valuable lessons. Your churches, so numerous and beautiful in architectural design, speak to us and the world of your religious history and life today, the secret of your charitable and educational institutions.

There are educational advantages here offered the Society of American Florists, of which the society should avail itself during its brief sojourn here and we have no doubt that your hospitality will warm our hearts, and lessons of your thrift and industry in various directions will do us good. We hope that our coming among you will bring you no bad luck, this being our thirteenth annual convention. Mr. Mayor I am sure I voice the sentiments of the S. A. F. when I most heartily thank you for your warm and cordial welcome.

After the applause with which this response was greeted President Adam G[illegible]ham of the S. A. F. was presented and he [illegible]d his address as follows:

President Graham's Address.

'LADIES AND GENTLEMEN, MEMBERS OF THE SOCIETY OF AMERICAN FLORISTS:—After a two year's campaign west of the Allegheny Mountains our society comes

back to the east, the stronghold of advanced horticulture in our country.

While we have no reason to regret our experience in the Middle States, where the work accomplished was of a character which we feel assured will leave a lasting impression for the benefit of our profession in its influence on the communities where these meetings were held, yet a broad and correct conception of the aims of the society will bring the conviction that we cannot fully accomplish our mission unless we carry the banner of the society into every section where its presence and influence may advance and promote the interests of the noble profession in which we are engaged, and where its unifying qualities may be brought to bear with advantage.

It is nevertheless a very great pleasure as well as a privilege to assemble here in the good old city of Providence, within an easy journey for all our friends from Washington, Baltimore, Philadelphia, New York, and last, but far from least, Boston. With such favorable surroundings we surely cannot fail to have a pleasant and a profitable convention.

We come here, not expecting to be able to teach our friends here how to love and cultivate all that is most beautiful in nature, for the people of New England have these lessons constantly before them in many magnificent parks and pleasure grounds, and in hundreds of beautiful private establishments. Rather do we come to draw inspiration from these beauties that have resulted from man's skill and intelligence, and to hear from the lips of riper experience than ours the lessons that will enable us to go back to our homes better and stronger for the same battles there. In all these matters the men of the east have been leaders and teachers equal to the best in the world. And because these things are so, few of us expect or hope to contribute as much as we receive, believing as we do, moreover, that from the general fund of information here each should be able to take more than he gives, as aggregate knowledge must always far exceed that of the individual. So I should say to each one here: Improve these opportunities that are before you. Our hospitable brethren of Providence give us a kindly welcome; the Society of American Florists provides instruction on many important subjects, on all of which nearly every one of us is still open to further information.

Our friends at famous Newport will show us what wealth and skill well applied can do toward improving a scene of great natural possibilities. Go to Newport and inhale the pure and invigorating sea air and enjoy one of the grandest views that the Atlantic coast anywhere offers to the eye of man. Or if these things be not to your liking, and you long for other means of relaxation to drive the cares of business away, you will find suitable opportunity in the various ways provided.

In regard to detailed information as to the finances and membership particulars will be forthcoming in the reports of our secretary and treasurer respectively.

The national charter which we hoped the government would grant us before this time is still under consideration at the capital by the powers that be. This is not by reason of any lack of hard work and earnest endeavor Mr. Smith, once our honored president, and always our tried and staunch friend, has labored with unflagging zeal in our behalf, and so far succeeded in his efforts as to have it passed through both branches at the last congressional session. But either through some unfriendly influence or through a misapprehension as to its purposes President Cleveland saw fit to veto the measure.

It has been suggested that by adding the words, "Ornamental Horticulturists" to our present title we should be better able to express the purposes of our organization, and we should at the same time facilitate the acquisition of the charter by removing the objections which some have raised to the present apparent narrowness of the scope of our operations. This amendment, with some other proposed changes in the by-laws of the society, will be submitted for your consideration at the proper time.

At the executive committee meeting in March Messrs. May, Harris and Manda were appointed a committee to correspond with the congressional committee of ways and means in reference to certain proposed changes in the tariff regulations and their effect on our business. They were also to appear personally before the committeee, if necessary, and present such facts and arguments as would aid congress in arranging as just and acceptable rates as possible upon imported plants, bulbs, and so forth.

These instructions to our committee were given only after a very thorough and careful discussion of the whole situation, which is a much more complicated matter than appears at first glance. Aside from the proposition to increase the first cost of imported stock, it was necessary to consider to what extent the resultant added expense to the final consumer would cause him to take other goods that, under present conditions, are entirely a home product. For instance it is common knowledge that under the past few years' tariff laws bulb flowers of all kinds have been sold so low that they undoubtedly were many times purchased solely because they represented the greatest return for the money to the average buyer, thereby leaving upon the home grower's hands stock that was produced by American skill and capital. There is also to be remembered the fact that this twenty-five per cent tariff represents that much direct, absolute protection against foreign competition. It would appear as though this advantage, combined with those of far cheaper land and more efficient labor and methods, should enable us to keep at home a great deal of the business in plants of all descriptions that heretofore has been done abroad.

Certainly the experiment seems well worth trying, though it is possible that natural conditions may be too much against us in the matter of Dutch bulb culture. These are some of the points that have been considered. Whether or not the reasoning has been sound experience can alone determine. There can, however, be no question as to the absolute justice of the duty levied upon articles of this character so long as the government is in need of money to meet its urgent annual expenses. As patriotic citizens we should not object to bear our share of the burden. To distribute the balance of this extra charge equitably among those who deal with us is a matter between us and those who buy of us, and the result will depend largely upon the wisdom with which we conduct our business.

Upon the suggestion of Mr. May the executive committee passed a resolution requiring the secretary to compile an annual list of all American novelties introduced during each year, together with the names of the originator and introducer, in addition to such information in reference thereto as would be likely to be of interest or value to the trade and the public; the same to be published exclusively in the annual report of the society. A report of this kind would undoubtedly be very desirable and valuable, but can only be made correct, or approximately so, by great care and labor on the part of the secretary, together with the hearty assistance of members of the trade.

At the same meeting a committee consisting of Messrs Rudd, Smith and May was appointed to work with the experiment stations in the investigation of fertilizers as applied to plant growth. The work assigned to this committee is of very great importance, and these very capable gentlemen should receive every aid possible in order to make their investigations and experiments productive of correct and profitable results.

It has also been suggested that wherever possible so to do we select some place for the holding of our meetings where facilities can be had for a large display of horticultural exhibits under cover of a tent or similar inexpensive and suitable enclosure. Whether the society endorses this suggestion or not, it certainly has some advantages to recommend it. At many of our meetings we have been more or less cramped for space, even where nothing more extensive than a trade extent has been attempted. We have been obliged on more than one occasion to occupy two halls, sometimes a considerable distance apart. This certainly is not very encouraging to exhibitors or convenient for members. This being so such a condition can not be to the best interests of the society. If we had assured facilities for holding our meetings in connection with an exhibition upon a scale more comprehensive than anything we have as yet attempted it would be an attractive feature both for members of the society and the general public, hence of value to the trade and the society.

The past few years, as we all too well know, have been a period of extraordinary business depression, and in some degree we have all felt its effects. But when we consider the immense and constantly increasing quantity of our productions it will surely be conceded that we have come through the ordeal with less disastrous results than any other business interests.

Our society, as might have been expected, has not entirely escaped the general depression, but we have reason to be gratified that we have so well maintained our position, and that so many of our members have stood by the colors through every discouragement with a loyalty which should give us encouragement and confidence in the future prosperity and usefulness of the society. It would not be candid, however, to attribute the present stationary condition of our organization entirely to business causes. Although it may appear somewhat like a reflection upon the good business judgment of many of the craft, it is nevertheless true that many of them take no active interest in the work of the society. Some do not stop at this point, but go further in adverse and not overfriendly criticism from the outside, instead of attempting to better what they object to from the proper position. These critics should bear in mind that destruction has always been easier than construction, and that an edifice, however faulty, is better than no building at all. The best way to correct architectural faults

CHICAGO FLORISTS AT MR E. BUETTNER'S, PARK RIDGE, ILL

is not necessarily to attack the foundation of the structure.

Aside from these there is another and far larger class that stands outside the society asking of what benefit it would be to them individually to join such an organization. In answering such a query I should like to lay more stress than is usually done upon the unification that has been accomplished throughout the trade since the society has been established. Prior to that time the florist nearly everywhere was a solitary individual, hardly recognized by the world as a unit in a great and growing industry. He had absolutely nothing in common with the craft in other cities, and not very much with his own fellow-tradesmen in his own city. Trade papers of general circulation and recognized authority among commercial florists did not exist. Local clubs were confined to a very few of the largest cities. Methods of construction, heating, ventilating, many of the processes of cultivation, and sale, were of the crudest character.

There is nothing in these statements that should be construed to mean that the Society of American Florists alone has brought about the wonderful results of late years. But what is meant, what I desire to lay particular emphasis upon is this, that through this organization, through the development of this tangible body, has come the feeling of strength, the sense of power to do those things that for the benefit of the trade in general and the individual in particular should be done. The melancholy hermit, abiding in various more or less dilapidated, flue-heated structures, conscious of his own littleness and feebleness compared with other callings, and forgetting to what degree his was intrinsically the better and nobler occupation, has given place (or is fast doing so) to modern methods of conducting operations.

The florist of to-day feels himself more than ever a member of a great and growing profession, worthy of ranking with the greatest and best. He has recognition and respect from the general public, not alone for himself but for his business. He can buy or sell in various markets. He gets reasonable consideration from transportation companies. He can attend, if he wishes, various exhibitions, general or special in their character, but all educative in his business and broadening in their tendency. By his trade papers he may keep in touch with the best and most modern methods. As I have said before, our society has not done all these things nor all of the many others that you all can recall. But I do say that without that convention of earnest workers in Cincinnati years ago the recognition of the potential power of the florists in America might have gone unrealized for many years, and we to-day should be as a whole far behind our present stage of progress. Some of these things have been made possible, and all of them have been helped by the society.

These are real, tangible, solid benefits, of which the trade in general has reaped the profit, and this is an answer to him who asks of what use has the Society of American Florists been to him. And if these benefits are to be retained, and increased in many ways impossible to forecast until the emergency arises, this sense of unity, of existence as a solid, compact and serviceable body, must be maintained and increased either by this society or some similar body. It is the real visible embodiment of the influence and power of the individual florists of America.

The rule holds good for the various auxiliary societies as well. While they do not perhaps in every case owe their existence to the original organization, yet they arose from a special need, the sense of which has developed in the parent association. The advance made in some of these special flowers, to promote which the smaller organizations were established, has been remarkable.

It may be well to notice here in this connection that the chrysanthemum society proposes to have certificates prepared during the present year in which provision will be made for the endorsements of the president and secretary of the Society of American Florists as well as the officers of the Chrysanthemum Society itself. The president of your society was also requested to appoint a committee to work with their committee in making awards to new chrysanthemums entitled to these joint certificates. Some such system appears to have many advantages, and is calculated to maintain and enlarge the influence of the national society, at the same time giving more weight and importance to the work of the chrysanthemum society.

To the national organization many of the local clubs, now scattered throughout the country, owe their existence and usefulness in their different spheres. Whenever it has been determined to hold a convention in a certain city the necessity for a local organization has at once been felt and the want supplied, and the result has been to bring florists together for this purpose in a way impossible to have accomplished otherwise. These clubs hold together afterward and exercise their solidifying influence in many ways, even where their members are not all members of the national society. It would seem, therefore, as though some means of connecting our local organizations more closely with the national one would present many advantages to all parties concerned, and a thorough canvass of the situation should result to the benefit of us all.

In years gone by such men as Peter Henderson, Robert Buist, and others, men of strong individuality, strict integrity and great business ability, men who came to this country with nothing but these qualities and an indomitable pluck and energy to carry them through, fought their way to the front and became recognized leaders in our industry. These men were looked up to within the various spheres of their activities, and to a certain extent within those limits they furnished example and instruction in the various branches of horticulture and floriculture. They stood for the forces of organization and intelligent effort, and as such were looked up to by the gardeners of their day. I do not doubt that many to-day still owe a great deal to the inspiration of these men.

But the enormous expansion of the limits of capital and labor involved in our business makes the domination of a few individuals no longer possible. We must have a greater, broader, and more impersonal organization around which the trade can rally. This centralization is recognized as absolutely necessary for the best results, whether the matter at stake be religion, politics, or plain business; and so far this subject has been treated purely from a business point of

view, because circumstances compel the most of us to make business considerations the fundamental ones.

The occupation that we follow is in itself one of the most beautiful, the most interesting, and ennobling, that the development of man's higher nature has brought into existence. It has always seemed to me that the intimate contact with nature and her various complicated processes that our calling makes necessary should tend to make us better men in every way. We see, or should at least do so, in the constant contemplation of these marvellous processes, the delicate handiwork of an influence far beyond our present powers of comprehension. We should feel, I think, that all the small matters about which we so constantly fret and worry, are after all but trivial things and little worth the trouble, and that after all the great things, those really worth striving for, lie far aside along the path of mutual trust and assistance, and when in the pursuance of that end we use all the opportunities that organization offers, then, and only then the mission of our national society is ended and its work done.

A vote of thanks to the mayor for his hearty welcome was passed without a dissenting voice.

Secretary Stewart presented his annual report as follows:

Secretary's Report.

MR. PRESIDENT AND MEMBERS OF THE SOCIETY OF AMERICAN FLORISTS:

In the secretary's report at Cleveland last year it was shown that lapses from membership on account of unpaid dues appeared to be on the decrease. It now becomes my agreeable duty to note not only a continuance of this encouraging condition, but also to report substantial additions to our ranks, in new members and former members who have rejoined.

Our roll now contains the names of 786 member exclusive of those added at this meeting, of whom 561 are fully paid up to January 1, 1897. Of the 225 who still owe for 1896 128 owe also for 1895. There were added in 1896 68 new names, and 31 suspended members have accepted the special concession offered by the executive committee for reinstatement. The 68 new members for 1896 are credited to the various states as follows: Ohio 20; California, Massachusetts, Pennsylvania and Rhode Island 6 each; Michigan 4; Illinois; Missouri, New York, and Ontario 3 each; Indiana, Connecticut, Kentucky, Maryland, Utah, Wisconsin, New Hampshire, Tennessee, one each.

The unusually large number of accessions for 1897 and the vitality and widespread interest manifested would seem to indicate that our Society has passed safely through the period of depression which has been fatal to so many enterprizes, that the organization is very much alive and that the campaign of education will surely win.

We have sustained losses by death during the twelve months since our last meeting, as follows: Wm. Robinson, North Easton, Mass., died September 16, 1896; Ed. Wachendorf, Atlanta, Ga., December 10, 1896; H. L. Sunderbruch, Cincinnati, O., January 6, 1897; Wm Elliott, New York, January 16, 1897; David Fisher, Montvale, Mass., February 16, 1897; R. J. Murphy, Cincinnati, O., February 24, 1897; John Saul, Washington, D. C., May 11, 1897; D. H. Roberts, New York, July 8, 1897.

The executive committee met in this city on March 9th, 10th, 1897, all the members being present except Messrs. Beatty, Rawson and McCullough, for whom Messrs. J. N. May, E. A. Wood and W. A. Manda served as substitutes. There was much earnest discussion, and every suggestion for the welfare of the organization was carefully considered. An examamination of the various halls resulted in the choice of the place where we are now assembled. A graded schedule of charges for exhibition space was adopted, and a gentleman of ability appointed to superintend this important feature of the convention. In accordance with the expressed desire of many members it was decided to encourage the exhibiting of new and rare plants by offering a number of silver and bronze medals for competition at this meeting. A sub-committee was appointed to work in conjunction with the various State experiment stations in the investigation of fertilizers and other subjects of vital interest to plant growers. The committee also went on record as favoring the selection of a location for the next annual meeting, possibly in the suburbs of the convention city, where room and facilities may be had for making an out door display with ornamental planting, etc. The program for this convention was carefully planned that it might reflect, as much as possible, the spirit of progress, which is so essential to the prosperity of our Society.

One of the most important acts of the executive committee was to provide for a system of annual registration of new and introduced plants, with description, etc., the list to be compiled by the secretary, and its circulation confined to members of the Society. This is the first step towards a stand which your secretary has long believed to be inevitable if we would keep the organization on its feet permanently. The annual cost of maintainance in our present form is considerable, as your treasurer's report will show, yet we give unreservedly to the public and spread broadcast without any restriction in our favor, every detail of this meeting, papers, discussions, exhibition, in fact all there is in evidence here today of advancement in the knowledge and practice of our profession. Is the spirit of generous loyalty, of unselfish appreciation, abroad in the land sufficiently to make this philanthropic course a safe one while our sole means of revenue is the receipts from annual membership dues, and the usual result of efforts to collect these dues is the ill-will which too often, in the S. A. F. at least, seems to be a natural sequence of delinquency?

It is understood that the committee which has been laboring with the problem of an equitable fire insurance for greenhouse property is now ready to bring forward a practical scheme and here may be offered an opportunity, similar to that unwisely thrown away at the time of the hail insurance agitation, whereby this Society may command the support of the majority of those engaged in the greenhouse industry. The proposed amendment to the by-laws, establishing a life membership fund may if adopted and well responded to, prove to be still another step towards a permanent, self-supporting existence. Anything that will tend to reduce the labor and expense of stationery, printing and postage on several hundred bills and duns sent through the mails several times a year is certainly worth trying.

The great, unsolved problem, as it looks in the light of the experiences of the secretary's office, is how to enlist the sympathy and financial support of our members who from business, pecuniary or domestic reasons or on account of remoteness from the place of meeting are prevented from attending the conventions regularly. We have in the distant state of Californian, for example, 10 members who are paying their dues annually, without complaint, and a message of congratulation and good fellowship comes with every remittance. What do they enjoy in return, other than the pleasant consciousness of having generously contributed towards the maintainance of an institution whose influence is exerted for the general good of the profession? The support of the stay-at-homes is indispensable, for even when we meet in the most populous centres and with the incentive of games and entertainments for those who enjoy them, the receipts from attendants at the convention cannot be depended upon to pay all obligations and have something left. What shall we give to the individual members of our organization, over and above what they can get practically for nothing, which will be recognized as sufficiently valuable to secure from the rank and file of the profession throughout the land their enthusiastic loyalty? Sentiment doesn't count here and literature is, unfortunately, in very light demand.

The demands on the secretary, particularly in the matter of correspondence, increase considerably each year, without relation to the number of names on the membership roll. A conservative estimate places the quantity of mail matter despatched from the secretary's office during the past year at over 6,000 pieces.

In closing this report I take the opportunity to thank officers and members for their uniform and kindly support at all times, and to congratulate the association on the heartiness with which those whom they have entrusted with the honors and duties of office have responded when called upon to do anything for the welfare of the Society.

Treasurer's Report.

Treasurer Beatty reported receipts for the year as $1883, which added to the balance on hand at end of last year made a total of $3511.51. Expenditures were $2490.32, leaving a balance of $1021.19 on hand Jan. 1, 1897.

Committee Reports.

The report of the executive committee recommended several important changes in the by-laws. They were ordered printed so the members might vote understandingly Thursday evening, at which time action will be taken. The report of the nomenclature committee had not yet been received.

The report of the committee on fire insurance was presented by Chairman J. G. Esler as follows:

Report of the Fire Insurance Committee of the S. A. F.

Your committee after careful consideration, recommend the following plan of fire insurance, which with slight changes to comply with certain requirements, could be used to effect an organization under the laws of either Indiana, New Jersey or Missouri. To organize under the laws of Indiana would require $1,000,000 worth of business, New Jersey about $2,000,000 worth of business, and under the laws of Missouri at least $5,

GREENHOUSES OF MR. E. BUETTNER, PARK RIDGE, ILL

000,000 worth of business. The general outlines of the plan are:

1. All insurance to be based as far as possible upon the classification previously adopted by the Society of American Florists. A signed statement of construction and condition of greenhouses to form a part of contract, and misrepresentation to create forfeiture in case of loss.

2. A one percent reserve on new business, and a three-quarters of one percent advanced assessment upon the minimum risk of the S. A. F. classification as a basis for assessments.

3. Assessments to be levied at option of officers when assessment funds fall below one percent value of risks assumed, notice thereof to be given to members before date of levy.

4. All risks upon which assessments have not been paid in 30 days from date of levy, shall become void, but members to be restored to membership if assessment is paid within 60 days from date of levy.

5. Adjusters to be appointed by the officers and a list to be filed with the secretary.

6. Notification of loss to be made to the secretary, and instructions wired to the adjuster whom he may select

7. Dwellings and outbuildings of members to be insured at a rate to be fixed by officers.

8. Five thousand dollars to be the maximum amount of risk, but after risks to be permitted when completely detached, 100 feet from all other risks.

We believe a classification, and a reserve fund, to be essentially necessary to any successful scheme of fire insurance of greenhouse property. Under the laws of New Jersey, organization can be effected without the use of premium notes. Under the laws of Indiana and Missouri premium notes would be necessary.

Your committee recommend that a temporary organization be made at once, as far as the election of a president, vice-president, secretary and treasurer is concerned. These officers could perfect detail, ascertain the amount of insurance that would be placed, and arrange for organization or purchase of a charter, and finally when a percentage of payment had been made, call a meeting of the members enrolled for permanent organization.

Your committee are confident that the success or failure of the plan presented now rests with the trade at large, and that it now remains for them to signify whether or not, they desire a Mutual Trade Fire Insurance Association, giving insurance at first cost.

After some discussion a committee consisting of Messrs. W. J. Vesey, J. G. Esler and Judge Hoitt was appointed to take the preliminary steps toward perfecting an organization as suggested in the plan.

The usual committee on awards in the various classes was appointed and Messrs. Edwin Lonsdale, M. H. Norton and W. R. Smith were appointed judges in the special new plant classes.

Tuesday Afternoon.

The carriage ride and visit to Swan Point Cemetery tendered to the ladies of the convention started from the Narragansett Hotel on Tuesday afternoon about 2:30. There were seven large barge wagons elaborately decorated with hydrangeas, asters, gladioli and smilax. To carry the party, and on account of the many husbands and sweethearts who thought it necessary to go along, so as to be sure that no harm befell their precious charges, they were all comfortably, no doubt to some delightfully, crowded. The route was through the business portion of the city, then along finely macadamized roads to the cemetery. Many fine residences were passed and the park system of one lawn merging into the other without the usual dividing fence seemed to be almost universal.

At the cemetery the party was met by Mr. Timothy McCarty, the genial and talented superintendent who gave them a hearty welcome and then preceded the coaches through the grounds of this thoroughly up to date cemetery. It is a modern place for burial of the dead and on every hand is to be seen the result of Mr. McCarty's master hand and brain in the development of one of the finest cemeteries in the country. Everywhere it seemed possible to beautify the grounds it has been done. A lake here, artistically surrounded with rock and planted on the border with appropriate trees and shrubs, there a summer house while near the middle of a green sward there crops out a large boulder looking natural and yet artificially arranged. This is repeated in several instances. A large and dangerous washed out gully has been turned into a beauty spot by the addition of large and small boulders and low growing trees suitable to keep the soil from being washed away. What was once an eyesore is now a charming ravine. A large stone wall, if it can be so called, borders the grounds on one side and is a marvel of the builder's art. It contains many stones weighing over a ton each and some of them more than five tons. The largest stones or boulders seem to be set in the top of the wall, while no cement is used, there appears to be no danger of their falling. It is vine covered with ampelopsis both quinquefolia and Veitchii, bignonias and aristolochias. This is a great feature of the landscape bank and is greatly admired by all who see it. An interesting group is composed of native shrubs and vines and is planted to look as homelike as possible.

After the tour of the cemetery the coaches were drawn up at the gate of Superintendent McCarty's lawn and the party invited in to partake of a substantial collation. The inveterable photographer now put in appearance and placed the group on record just as they stood. After three cheers for the jolly host and hostess, the party returned to the city by another route.

The committee in charge from the Providence Florists' Club were: Farquhar Macrae, N. D. Pierce, Jr, Thos. J. Johnston, M. J. Leach, and Mrs. F. Macrae and other ladies of the ladies' auxilliary committee. The afternoon was an ideal one in every respect and all returned delighted with their trip Tuesday evening.

The President's Reception.

The usual president's reception was this year an unusually brilliant affair. After those present had been entertained by some excellent orchestral music, lines were formed and all gave President Graham a personal greeting and shake of the hand. He had a kind word and friendly grasp for each and all were made to feel that they were partakers of the good fellowship that prevailed. After this ceremony was concluded the Union Veteran Quartette rendered a vocal selection, "The Grand Old Flag" in a way that stirred the hearers greatly and on recall they favored the company with a lighter selection in an equally acceptable manner. A letter from the Governor of Rhode Island, was read by the secretary, in which that official expressed in a very happy manner his regret at not being able to be present, and in which he used terms very eugolistic of the Society of American Florists. Then followed vocal solos by Mrs. Florence D. Snow, with violin obligato, which were much enjoyed, and finally the floor was cleared for dancing in which the young people at once took part, refreshments having been served in the meantime. All seemed to enjoy themselves thoroughly and to feel that their social reunions were to be encouraged.

Wednesday Morning.

The reports of judges of the trade exhibition were read and adopted. The awards will be found in another column. Prof. Halsted not being present, his essay was read by Mr. J. N. May. It was as follows:

Root Galls of Cultivated Plants.

BY PROF. BYRON D. HALSTED, EXPERIMENT STATION, NEW BRUNSWICK, N. J.

[Read before the Society of American Florists at the Providence Convention.]

Galls, that is unusual malformations of small portions of a plant, occur upon leaves, stems and roots, and may be induced by insects or other animals, fungi, etc. The time limits of this paper will not permit even the briefest outline of the various forms of galls of leaves or stems, and the subject assigned me is at once taken in hand.

Root galls are many and equally various as to their origin. A cabbage or turnip plant, for example, is making a death struggle and upon removing its roots from the ground they are found malformed beyond what the imagination would picture. The English truckers call it "finger and toes" in an attempt to describe in the name the strange combination of roots. We called it "clubroot" or "clump foot"; but by whatever name it is known the fact remains that the root system has been wonderfully malformed and instead of the ordinary fibrous roots there are a multitude of ill-shaped nodules strung together.

This galling of the turnip, cabbage and allied plants is due to a minute fungus that makes its attack upon the plant, while it is quite young and the roots are small and tender. The germs are in the soil and remain there for years feeding upon the roots of weeds or other plants belonging to the cabbage group of plants. Thus the mustards, shepherd's purse, pepper grasses and similar weedy plants all harbor the club-root fungus. This fact of the wide range of the turnip club root pest is brought out to show how plants related to the crop infested may be the means of preserving the enemy and even increasing the germs in a soil, while the field is devoted to some other crop simply because the weeds as nurse plants of the fungus are permitted to grow.

Instead of a cabbage one pulls up a vigorous bean plant. Upon its branching roots are a score or more of nearly spherical bodies half the size of small peas. These are the so-called tubercles and consist of a wall of normal bean root tissue; but within this the cell contents consist of innumerable bacteria-like cells.

The following is Tubeuf's description of these galls as translated by Smith in the large book upon "Diseases of Plants" issued during the present year. "The short red-shaped microbe forces its way into a root hair or epidermal cell, multiplies there, and is conducted to the inner cortical cells by plasma threads continuous through the cell walls. A rapid division of the inner cortical cells is set up till a tubercle is formed. * * * The bacteria multiply simultaneously and are transfered into new cells where a great change comes over most of them; they enlarge very much and become club-shaped or dichotomously branched bodies without power of division. * * The great importance of the tubercles of leguminosæ is that the plants bearing them are capable of taking up free nitrogen from the atmosphere and utilizing it."

This somewhat lengthy quotation has been made because the finding of these galls upon the roots of clover and other leguminosæ by some growers of roses and other ornamental plants had led to some discussion in the public press. The galls common to the clover roots and those of peas, beans and many other plants are not due to the same cause as those met with upon the roots of many ornamental plants and the finding of them upon the clovers growing in a certain soil should be in no way used as a reason for discarding that soil for greenhouse purposes. In like manner the galls produced in the roots of any clover or clover-like plants in a bed devoted to roses is no index whatsoever that there is danger of the roses becoming galled.

The subject of tubercles and the peculiar relation that they bear in the economy of the plant bearing them forms one of the most interesting chapters in modern vegetable nutrition. In case of the galls upon the cabbage roots they are a positive injury and sooner or later the plant loses the power of root absorption and wilts and dies; the roots in the meantime becoming rotten and foul smelling. With the tubercles of the leguminosæ there is increased vigor given to the plant that bears them and the advantage of their development is a well recognized fact which is taking practical shape in the artificial propagation of the tubercle germs and their being sown where there may be otherwise a lack of them in the soil.

In the third place let us consider the nature of the root gall of the roses. These are not due to fungi or the organisms that produce the tubercles of the leguminose plants, but result from the attack of microscopic worms that are known as nematodes. These creatures are in form like that of an ordinary eel and under the microscope are easily recognized by their almost constant wiggling, thus giving them the common name of eel-worms. The general appearance of rose roots when infested with the nematode worms is not unlike that of a lupine or a sweet clover plant. The galls of the one might easily be mistaken for those of the other until the microscope is brought to the rescue when the differences become so remarkable that the wonder is that causes so widely separated should produce results that to the naked eye are so similar.

The galls of the rose vary much in size and shape, but usually are but a small fraction of an inch in diameter and consist of enlargements of the fibres of the root system.

These nematode galls are much more abundant upon the roots than generally known and because of their being under ground they remain unnoticed until the infested plants show unmistakable signs of decline when an investigation results in the discovery of the root galls. They are much more abundant in warm climates than elsewhere and that is one reason why they are especially prevalent in the greenhouse.

In looking up the subject of a tomato blight in Mississippi a few years ago the writer was impressed with the fact that nearly every tomato plant was affected with root galls due to nematodes. In the north the freezing of the soil thoroughly and deeply during the winter tends to keep these root enemies in check, and from experience it is a fact that they are more abundant in seasons that follow mild winters.

In this there is a practical suggestion, namely the long hard freezing of a soil that is to be afterwards employed in the greenhouse for the growth of plants like roses and violets that are very liable to attack from the nematodes. These worms propagate with great rapidity where conditions favor them, and it is better to take all precautions in keeping them out of the bed at the outset than to leave the work of eradication until after they are well established in the plants.

This leads directly to a consideration of precautionary measures. In the first place the plants should be free from the worms, the most difficult end to reach, as it means a removal of the earth and a careful examination of the roots with the rejection of all plants that are infested. The eel-worms may come in with the earth and, as before stated, they infest the roots of many plants, there is difficulty in making a selection and feel at all certain of freedom from the worms. Soil that has been used for growing a previous crop should be discarded, especially if the plants lacked in vigor, due to inroads upon them made by the nematodes. Freezing, as before stated, is a cleansing process for the soil. On the other hand a high temperature is also inimical to them. The heating of the soil, either baking or steaming, is probably the more available of the two treatments and has been resorted to by some growers with cheering results. If manure should be the chief vehicle for the entrance of the worms it may be possible to either heat it, or else resort to plant food added in the form of commercial fertilizers. It is also possible that some substance may be put upon the soil that while harmless to the plants may kill the worms that are not already in the roots of the plants. Lime is such a substance, which when sprinkled over the surface will at each watering yield a lime wash that is destructive to the worms it reaches. Kainit, one of the leading commercial fertilizers, has proved effective in combatting insects that work through the soil, and it is not unlikely that this substance may prove of value in the greenhouse.

In conclusion it has been the attempt in this brief paper to call attention to three classes of root galls by citing one case of each. First those malformations of roots like the club-root of the cabbage due to a low form of mold, the germs of which enter from the soil, and when in sufficient number destroy the affected plant.

Secondly the root galls of clover and clover-like plants which are produced by bacterial germs, but instead of inducing decay promote the life of the plant in which they are lodged. Between the clover and the tubercle germ there exists so-to-say a mutual understanding, and their life processes are united for the benefit of both.

Lastly a third class of root galls is considered, namely, those most abundant upon the roots of greenhouse plants and much dreaded by florists. These are produced by microscopic worms that thriving in the tissue of the abnormally swollen roots check the activity of the plant and ultimately may cause it to sicken and die.

For the eradication of these microscopic eel-worms there are certain precautionary measures that may well be borne in mind, namely the examination of the roots of plants and the rejection of all that are galled; the cleansing of the soil in all its constituents by freezing, baking or steaming; the use of lime water while the crop is growing and possibly that of Kainit or some other commercial fertilizer, bearing in mind always that sick plants are unprofitable and good management means watchfulness from the start and always.

NEW DWARF GERANIUM MARS BEDDED OUT.

In the discussion that followed Mr. M. J. O'Brien said that while eel worms cannot usually be seen through an ordinary magnifying glass, their presence can be noted when a small piece of a root gall is squeezed between two pieces of glass and then placed under the magnifier. Mr. May stated that in examining a root gall for eel-worms he moistened a piece of the gall and squeezed out the liquid with a pair of tweezers. In this liquid the eel worms could be readily seen under the microscope. He had counted as many as thirty worms in the liquid from a piece of root gall no larger than a pin head. Mr. May knew of no way of killing eel-worms in the soil except by heating the soil to from 220° to 240°.

Mr. Benj. Hammond recommended the use of lime mixed with a small quantity of nitrate of soda. The nitrate was added merely to stimulate root action. The lime slacked slowly and when in the form of a dry powder was sifted over the bed. Each watering would carry some of the lime to the eel worms. The thanks of the society were extended to Prof. Halsted for his valuable essay. Prof. Rane was on hand and read his paper, as below.

The Florist as Scientist vs. Artisan.

BY E. W. RANE, NEW HAMPSHIRE COLLEGE.

[Read before the Society of American Florists at the Providence Convention.

By way of introduction, I wish to say that by the term florist I really mean horticulturist, using it in the broader sense, just as we call our gathering the Society of American Florists, the term including the landscape gardener, park superintendent, and not excluding, as far as I know, the vegetable or fruit grower, should he desire to join.

Most of us call ourselves florists while here; nevertheless, I dare say but few of us adhere strictly to floriculture. The great rank and file grow plants and flowers but find it to our advantage to have had more or less experience in laying out grounds, growing vegetables and fruits, propagating shrubbery, caring for parks, cemeteries, etc.

Much was said last year about changing the name of our association, many thinking we have outgrown the old name and that the term does not convey the larger and truer meaning it should. While this is true, it nevertheless appears to me that it is far better to have an association with an elastic name rather than one with a name too general. There are enough florists in this country to make this society a success, and florists as a class are such whole-souled and good-hearted people that they are always willing to expand and enlarge along parallel occupations should circumstances desire or demand it. I would venture to say that should I inquire of this association as to the best varieties of lettuce or celery on the one hand, or shrubs and trees on the other, the subject would be as ably discussed as the culture of many flowers.

During the past year I had occasion to advertise for a foreman to take charge of both greenhouse and gardens at the New Hampshire College, and found that all the applicants were men claiming to be experienced in one as well as the other. During the past month a gentleman living in London, England, having just completed a fine summer residence in our town desired to get a man suited to take charge of his place. It is needless to say that there was little trouble in filling the same. There are plenty of men who have prepared themselves for just such places. This man wanted drives laid out, a small vegetable garden, plants for his table and conservatory, lawn kept in order, etc.

Now to return to my subject, should I call a person filling the last named position, or in fact either, a florist or a horticulturist? Perhaps the latter would be more fitting, but were neither a florist they could not have filled the positions. We may consider florist, therefore, as a broad term for the present.

It is equally important that I convey to you my meaning of scientist and artisan. Perhaps I should have used the terms educated and uneducated florists; however, that does not convey the whole meaning I desire to present. It appears to me many times that the term scientist is misconstrued. A scientific florist is simply a man who has a knowledge of the elementary sciences, such as botany, which may be divided into systematic, economic and physiological; chemistry of plant growth; soil physics; geology; entomology, or the classification and study of insects and how to combat them; micology or the study of plant diseases, their remedies, etc. To some education in all these branches may seem unnecessary, but they are, nevertheless, as fundamental to the enlightened understanding and due appreciation of a florist as it is for a doctor to have a knowledge of the origin and uses of the medicines which he prescribes for his patients. Time was when there were few doctors and many so-called "quacks"; nowadays the quack is disappearing. The natural tendency, however, is towards physicians well educated, trained and skilled in their profession. The quack was a doctor in the days gone by as much as the M. D.; and the terms artisan and scientist are as applicable to these two cases as they are to the term florist to-day. We would have the quack doctors with us still were not that the study of medicine has reached a scientific level and only those able and willing to attain that high standing are recognized as worthy of practicing it.

The florist is not compelled to pass any state examinations to practice his profession, and his occupation is not directly parallel to that of the physician; nevertheless, it should be our aim to make our calling of high attainments. Although many of us are capable of growing flowers and making a financial success of it, we nevertheless are anxious that the occupation we represent be ennobled and of high standard.

Who of us would not have our sons and daughters better educated than we ourselves in the fundamentals that go to make their occupations in life the better understood and loved? It is here then I desire so point out in a general way the difference between the florist as scientist and artisan. Time was when the florist was simply an artisan or person apprenticed to his profession, required to do in a mechanical way as his employer or foreman did; no reasons or explanations were necessary. He simply imbibed the business until he became an automatic machine, never doing anything in an original way. We doubtless have many florists to-day that belong to this old school of training, and many too that are considered a prize by their employers. I think it is Peter Henderson that shows in some of his writings very plainly that in floriculture, as in other occupations, American thrift and enterprise have rapidly been changing, and that one finds that there are other ways of doing things even better, quicker and by far more profitable than the old one.

In floriculture, as elsewhere, the wide awake man who is well versed in and prepared for his life work is the successful one. It would be a simple matter for me to point out as noted examples members of this association, who are recognized as men of thought and ability, as is evidenced by their publications and writings. These are the men we feel proud of and point our would-be florists to as examples. There are plenty of us who can do routine work of floriculture, but comparatively few who can stimulate others to an appreciation of our labors. I sincerely believe that we as florists should resolve to place a higher standard of education upon our employes and insist that they become versed in the simple scientific principles covering plant growth, so that they would become more actively interested in their calling.

Education means advancement. I have students in my classes in horticulture who know nothing about floriculture or its allied subjects, nor even, perhaps, ever cared anything about the subject until it was brought before them, when many became deeply interested. Although few ever became florists, nevertheless, from their short experience in such work as in making an inventory of all the plants in the greenhouses, recording their names, propagating a number from both seeds and cuttings, learning something of their insect enemies and fungous diseases, etc.,

they gain an interest in them that is lasting. One young man taking the general agricultural course who has a year yet before graduating, naturally took to the subjects of forestry and landscape gardening. For his practical work this spring term he surveyed, plotted and prepared general drawings for our college grounds.

We need more teaching of floriculture. Floricultural schools are the things of the future, as, indeed, is already being evidenced. Courses in floriculture are already offered in our best agricultural colleges, there being in some cases both the scientifically trained teacher and a good practical florist, under whom the student receives his instruction. It was but a few years ago that horticulture was recognized as being of enough importance in our colleges to allow a man to devote all his attention to it. The professor of horticulture has invariably been professor of agriculture, botany, entomology, geology; etc., in which horticulture usually received the least attention. It is needless for me to say that this is rapidly changing.

Horticulture is a term covering science and art of pomology or fruit growing, olericulture or vegetable gardening, floriculture and landscape horticulture. A horticulturist is not a specialist as much as a florist. The one is general, while the other is specific. The requirements or preparation for either should be the same up to a certain point. No student can be made properly to understand the facts of horticulture unless he is thoroughly grounded in the elementary sciences of botany, chemistry, etc., which underlie the principles of plant growth. The sciences underlying floriculture are necessarily taught in our advanced common schools. Much is said in these days about agriculture and its allied branches being taught in our public schools. We might join such and ask that we specialize still further and treat floriculture here also. It seems to me here we make a mistake. It is well enough to decorate and embellish school rooms and grounds and insist that our school teachers have a liking for and knowledge of the vegetable kingdom, but it is another thing to teach abstract principles to those who have no idea of the simple. The primary school is the place, however, for primary instruction, and should be confined to that. What the child needs is a general education with the technical brought in as early as possible and not too early.

This is the practical age, and success seems to be measured by the financial side. Everything that contributes to money-making seems to be sought after regardless of consequences. The haste to become a full-fledged florist has undoubtedly dwarfed many a young man that might have been better prepared for his life work had he stuck to schooling longer. This is not only true of the florist but in many other professions. The utilitarian idea has caused many a lawyer, preacher, farmer, horticulturist, doctor, etc., to take the shortest cut toward passing as a representative of one or the other of these various professions, with the result of being handicapped.

A fourth rate lawyer seldom becomes first rate, a quack doctor a first-class physician, a poor preacher an orator, or in fact an uneducated florist the representative man he might be had he prepared himself the more thoroughly. There are hundreds of florists to-day who, had they the proper earlier training to enable them to understand and express themselves plainly, either orally or in writing, who would be far in advance of what they are already. I do not desire to be understood as criticising in any way our florists of to day, as no country of the world has made more rapid advancement in so short a time; nevertheless we have a future before us that promises much provided the advancement is of the right sort. It is with this future plainly in view that I throw out the thought of this short paper.

If we remain content with making a financial success only and ever live for grasping and thrusting the almighty dollar into our pockets, we forget the goal of life. Doubtless there is many an artisan who lives and appreciates his work, but how much more he might appreciate it were he better prepared to comprehend its broader significance.

Finally we can not know too much about our occupations; the more that is known the broader the horizon and the greater pleasure and profit to be had. The inspiration, fellowship, and broader knowledge gained attending meetings of this sort are in the direct line of education. Many florists remain away doubtless on account of the expense principally; others think they can not be taught anything they do not know already. I do not believe there is a single progressive florist or person interested in floriculture within reasonable distance but that would be fully repaid financially as well as educationally should he attend and get in touch with the real object of this association. The practical idea should not absorb the mind so that people lose sight of the broader fields.

To conclude, I would not be understood as advocating never to advise young men to attempt becoming florists were they unable to have had the training of a scientist. It is well known many have and others will make successes in this very way. The artisan is fully as important as the scientist, but where both can be found in one the nearer we approach the ideal florist. Let us elevate, ennoble and improve our chosen profession by improving our own opportunities as well as stimulating a worthy appreciation and better preparation for the work of future generations, thereby bringing greater credit to the name FLORIST.

There was no discussion, and a vote of thanks to the essayist was unanimously passed.

Mr. Charles Jackson Dawson then read his paper on Shrubs for the Florist, for which he also received a unanimous vote of thanks.

The selection of the place of meeting for next year brought out an unexpected display of oratory. Invitations were received from a number of cities, but the two leaders were Omaha and Detroit. The claims of Omaha were ably presented by Mr. F. W. Taylor, chief of the horticultural department of the Trans-Mississippi and International Exposition, to be held in Omaha next year. He read letters of invitation from the Nebraska State Horticultural Society, from the Governor of Nebraska, from the Iowa State Horticultural Society, from the secretary of the Trans-Mississippi Exposition, from the Commercial Club of Omaha and one signed by every florist in Omaha, Lincoln and Council Bluffs. But even all this would probably not have prevailed but for the added eloquent and urgent appeal by Prof. Geo. E. MacLean, chancellor of the Nebraska State University. He stirred the members deeply by his appeal for recognition of the country beyond the Mississippi, and that the society live up to its name "American" in the fullest sense of that broad term. Detroit was represented merely by written communications, and though all felt that Detroit was more advantageously located and that they were sure of a hearty welcome there, the pressing invitation of the Omaha people resulted in 138 votes for Omaha and 51 for Detroit, thereby selecting Omaha as the convention city for 1898. An invitation was recived to meet with the Pan-American Exposition at Niagara Falls, N. Y., in 1899.

The Shooting Contest.

The shoot, while successfully conducted was a rather tame affair, Philadelphia winning without effort. The clubs and numberous friends reached the grounds of the Narragansett club beyond Olneyville shortly after two o'clock.

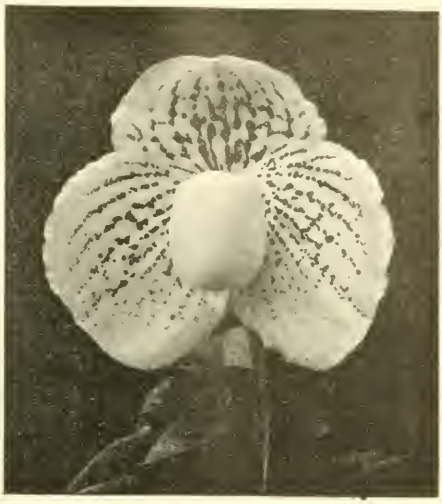
A champion flag blew from the pole on the club house beneath Old Glory, and the grounds were of the best, and well arranged for bringing out the gunners' skill. There was some disappointment expressed that the entries were so small, only three clubs, Philadelphia, Buffalo and Providence, taking part. The "intellectuals" of Buffalo did not seem to feel at home, probably because of the far-away look in the eyes of their chief William as his target settled peacefully into the grass after his salute to them. They managed to get second place from the Providence men, however, and then talked bowling. The match resulted as follows: Philadelphia, 90; Buffalo, 45; Providence, 33.

The contest for individual prizes other than those on the teams was interesting and the crowd was glad to applaud the man when he happened to hit one. All shot at ten targets, four gentlemen missing the entire lot.

George McLean, of Philadelphia carried off the first prize with a score of 5, Thomas W. Cook was second with 4, and J. Merrion won third place with 3. After shooting off two ties, there were plenty of refreshments and all returned to the city in a merry mood.

TEAM SHOOT TWENTY-FIVE TERGETS.

PHILADELPHIA	Hit	Missed
John Burton	16	9
C. D. Ball	17	8
Lemuel Ball	9	16
W. K. Harris	14	11
W. Taplin	14	11
George Anderson	20	5
Total	90	60
BUFFALO.		
William Scott	7	18
Geo. Fancourt	1	24
W. Kasting	14	11
C. Hagenberger	3	22
H. H. Tucker	6	19
E. Steffens	14	11
Total	45	105
PROVIDENCE.		
Robert Johnson	8	17
Samuel Lewis	7	18
H. F. A. Lange	8	17
Peter Byrnes	2	23
J. P. Dillon	3	22
A. M. Rennie	5	20
Total	33	117



INDIVIDUAL SHOOT TEN TARGETS.

F. W. Herendeen	0
J. Merrion	3
J. M. Logan	0
Martin Edwards	3
George T. King	3
Geo. Sutherland	0
Samuel Henshaw	1
Wm. Appleton	2
F. Wildie	2
J. Manda	0
M. Rockwell	1
Wm. Krick	2
Geo. McLean	5
Wingate Bushnell	3
Thomas W. Cooke	4
J. A. McCrae	1
E. MacCarron	1

Merrion, Bushnell and Edwards shot off their tie for third place which was won by Merrion.

CYPRIPEDIUM BELLATULUM.

CYPRIPEDIUM BELLATULUM, YELLOW VARIETY.

American Carnation Society.

At the meeting of the American Carnation Society Wednesday afternoon there was an extended discussion on methods of judging, but no definite action was taken. The feeling was general that changes were needed to adequately meet existing conditions and to do exact justice to American exhibitors and the discussion will undoubtedly result in the formulation of something practical to be acted upon at the annual meeting in Chicago next February.

Chrysanthemum Society of America.

At the annual meeting of above society held in Providence Wednesday afternoon the secretary submitted his report showing the new varieties judged during the year, varieties certificated, names registered, etc. The treasurer's report showed a balance of $359.81 in the treasury. A motion was passed that the various committees be instructed not to give out any information as to awards and number of points scored until their reports shall have passed through the hands of the secretary who is charged with giving to the press such information. The secretary being absent, the members took advantage to vote that hard working officer a salary of $50 a year. The following new standing rule was adopted:

Protests against any award of the judges must be submitted in writing to the secretary before January following the date of the award protested against. The secretary shall refer the same to the executive committee, who shall take action on same as early as possible.

The proposition to issue certificates jointly with the Society of American Florists was laid over for one year. In view of the satisfactory condition of the treasury the dues were reduced from $2 to $1 a year. It was ordered that the society offer annually a silver cup to be known as the Chrysanthemum Society of America Cup, value $20, for best six chrysanthemums of 6 varieties (36 blooms), to be competed for at various cities where exhibitions are regularly held, one city each year, the awards to be made by judges to be appointed by the officers of the society, said exhibitions to be held about October 20. It was further decided that the competition for next October be held in the city of New York. The officers were re-elected as follows: E. A. Wood, president; E. G. Hill, vice-president; Elmer D. Smith, secretary; John N. May, treasurer.

Florist Hail Association.

At the annual meeting of the Florists Hail Association, the secretary and treasurer submitted their reports as appear on another page. The vacancies in the board of directors were filled by the election of J. C. Horan, Bridgeport, Conn.; Wm. F. Dreer, Philadelphia, and J. C. Vaughan, Chicago. Officers elected were J. M. Jordan, president; J. C. Vaughan, vice-president; John G. Esler, secretary; Albert M. Herr, treasurer. An amendment to the by-laws was proposed providing that the salaries of the officers be a percentage on the business transacted instead of a fixed amount. This will be acted upon next year.

Wednesday Evening.

A heavy rain storm undoubtedly kept many away from the lecture in the evening by Prof. George L. Goodale, of the Botanic Garden of Harvard University, on "Our favorite exotic plants in their homes," though those present voted it a most delightful and instructive feature of the convention.

Prof. Goodale illustrated with very beautiful stereopticon views the subject of tropical vegetation, describing with much detail the palms, orchids and other exotic plants which are the pride of our best greenhouses. The lecture was given without any technical language and passed in brief review the characters of the genera and species which have become general favorites under cultivation. He showed that the term exotic is only relative, that our common wild plants would be exotic if grown under our skies, and, further, that a good many of our wild flowers are quite as well worth cultivating and improving as some which have become established here. The fashions in plants by which certain species are for a while great favorites and then give way to others were shown by the lecturer to be based on other factors than the whims of capricious people. The gigantic bamboos and climbers of Ceylon and enormous ferns of Australia were exhibited by means of photographs on the large screen. Perhaps the phase of plant life presented by the kinship between the plants of the north and of equatorial zone, touched upon by Prof. Goodale, gave as many surprises to his audience as any part of his graphic demonstration.

Prof. Goodale took occasion to speak in high terms of the great influence exerted by the Society of American Florists on the cultivation of plants in this country, and he alluded also to the excellent influence of our best horticultural periodicals in elevating the taste of the community.

Thursday Morning.

Thursday morning the report of the nomenclature committee was presented and a number of presumed synonyms were noted, though it was stated, that no serious matters had come to the notice of the committee, no doubt due largely to the stand taken by the secretary in discouraging the duplication of names and in promptly publishing such as were noted.

There were additional reports from some of the exhibition judges. A new Rex begonia shown by Pitcher & Manda was noted as a new departure. A coleus shown by C. Hagenburg was regarded with interest. A certificate of merit was awarded to Luther Armstrong for an ever-blooming tuberose. The insecticide Nikoteen was recommended as worthy of trial.

Mr. J. J. Butler read a very brief paper on bedding plants, noting the begonia as used at Newport as an excellent bedding plant and urging all to inspect the beds there at the time of the visit to that city. He said that 11,000 plants could be seen in one garden.

Mr. May agreed with the essayist as to the progress of the begonia as a bedding

plant, and called attention to the progress of the canna and of the eroton as bedding plants.

Mr. A. H. Herrington deprecated the present meagre use of the wealth of material at our command. He thought we should have more flowers and less colored foliage, and that a majority of the flowers should appeal to the sense of smell as well as that of sight. He thought there should be an increased use of the many excellent annuals and noted some striking and beautiful effects that had been produced by zinnias, balsams, petunias and portulacas.

In the absence of M. H. Walsh, his paper on the rose was was read by Rob't Craig as follows:

A Year's Progress in Roses.

BY M. H. WALSH.

[*Read before Society American Florists at the Providence Convention.*]

MR. PRESIDENT AND MEMBERS OF THE SOCIETY, LADIES AND GENTLEMEN: I thank you for the honor conferred by inviting me to address you on the subject of "A Year's Progress in Roses." Since the last essay on the rose by Mr. Isaac Kenneday of Philadelphia, which was read at Pittsburg, Pa., new and valuable additions have been made to the rose family both for indoor forcing and hardy garden varieties.

In the hybrid teas we are getting a new class or race of practically ever-blooming roses, a great boon to all lovers of the queen of flowers. We have also added to the list of hybrid perpetuals which I shall refer to later.

In 1895 a new variety of the hardy hybrid tea was disseminated by Messrs. Pernet-Doucher of France, named the Souvenir du President Carnot. It is a seedling from Lady Mary Fitzwilliam, and that is all we know about it so far as parentage is concerned. Last fall it was exhibited at several exhibitions and received many certificates of merit, silver medals, etc. It created a great sensation when sent out as being a grand forcing rose, a good grower and superb flower. It produces a long bud, large and full, color rosy flesh, shaded white at edges of petals. It certainly is a valuable addition to our hardy ever-blooming varieties, and may prove an excellent variety for forcing, by further trial, although some are in doubt.

We have also Maman Cochet, one of the best and hardiest in its class. Color, carmine, mingled with salmon-yellow, large and full, superb; a grand garden rose. Another valuable variety is Madame Abele Chatnay, sent out by Pernet Ducher, which blooms constantly, bud fine, opening spirally; flowers full; color, carmine-rose shaded with salmon. In addition to the above named varieties, we have Caroline Testout, which has practically displaced La France; Kaiserin Augusta Victoria, an excellent variety for forcing, or as a garden rose. A beautiful primrose color; raised by Peter Lambert of Germany.

Now, Mr. President, I come to the most pleasant part of this subject, A Year's Progress in Roses. Real progress! By that I mean new and improved varieties of American origin, of which Mr. John Cook, of Baltimore, Md., has added one to the above list, Mrs. Robert Garrett, which has received flattering notice in the Baltimore notes in the AMERICAN FLORIST. It is a most lovely flower; soft pink color, flowers large, foliage fine. It is said to be a grand forcing rose and bids fair to lead all the pink varieties. From its parentage, Sombrieul and Caroline Testout, it should be an acquisition to the hardy teas. Mr. Cook is the originator of Souvenir de Wooton, Marion Dingee, and other good roses. Extract from Baltimore letter in AMERICAN FLORIST, page 803, issue March 27, 1897.

"The exhibit of Mr. John Cook was a departure from the rest as it was a vase of roses, but such roses! They towered above the carnations on strong stems clothed with heavy foliage, and were as large as American Beauties, but of a beautiful clear pink, almost light enough to be called a shell pink. The name is Mrs. Robert Garrett and it will get a first-class certificate, the chairman of the committee saying that it is conceded to be the finest rose ever raised in this country. It is a cross between Sombrieul and Mme. C. Testout and forms a valuable addition to the class of large roses, which is represented almost entirely by American Beauty and which will probably supplant the small flowered ones, as has happened in the chrysanthemum and is happening in the carnation."

There is also a new white hybrid tea, Lillian Nordica, a seedling from that grand rose Margaret Dickson by Madame Hoste. In color it is pure white, long buds, large flower of good substance, on long stiff stems, forces well, has dark rich foliage and is very fragrant. At the Boston Rose Show last June, it received the society's silver medal, and in June, 1896, a first-class certificate of merit. It is considered a valuable addition to the hardy ever-blooming varieties of American origin.

The above named varieties I consider improvements on existing varieties, and in the line of progression, but we must not be content to rest here, we must strive to add to the above list. The improvements to be effected in the above list are: To obtain new reds, maroons and creams, possessing vigor, freedom of blood and hardiness. Then this race of roses will be universally admired as garden roses, growing in ordinary soils. We have a large and unlimited field in which to experiment and improve. The art of hybridization is simple; so easy and responsive, we should all make an effort to improve and continue in the good work, for there is no limit to the improvements in the several classes or families of roses.

In the hybrid perpetual class a new rose has been sent out last spring by the well-known firm of Messrs. Peter Henderson & Company, New York. It is named the Jubilee. It was awarded the Massachusetts Horticultural Society's gold medal in 1895, the highest award in the gift of the society, and I am informed the first gold medal ever awarded a rose of American origin in this country. It was awarded a first-class certificate in 1893. It is from Prince Camille de Rohan by Louis van Houtte; it is one of the most vigorous growers on its own roots. It had been exhibited three years in succession at the Massachusetts Horticultural Society when the committee decided to inspect it growing in the ground, which they did. The following is a copy of their award:

"Dear Sir—Since the visit of the Committee on Flowers of the Massachusetts Horticultural Society to Wood's Holl, and inspection of your seedling rose Jubilee, they have discussed the merits of the variety and are unanimous in pronouncing it the finest American raised rose that is known to them, and the equal of any European rose of its class. Its magnificent color, united with a beautiful form, large size, and grand foliage, and vigorous habit, they believe makes it of great value and worthy of the highest award given by the society. We therefore award you the Society's Gold Medal.

(Signed) A. H. FEWKES, Chairman."

Mr. F. Schuyler Matthews, the artist, and leading expert on colors in this country says, "I have never seen a rose of such intense and dark color. The rose contains the darkest color combined with pure color of which nature is capable.

(Signed) F. SCHUYLER MATTHEWS."

In hybrid perpetual roses, Mrs. R. G. Sharon Crawford is the best of all the light colored varieties. Clio is a grand flower; Helen Keller also. Mavourneen, one of Messrs. Alex Dickson & Sons' productions of 1895, is valuable as a climber or a cut-back. Color is a delicate silvery flesh, white shaded rose at base of petals, which are of excellent shape and substance. Marchioness of Devonshire is a grand rose, of a beautiful satin pink color. There is also in commerce in this country a hybrid tea, Clara Watson, raised by Mr. Prince in England in 1894, described as a salmon tinted pink, and a good rose. Of the hybrid polyanthas Marie Faive is by far the best of all, blooming freely through the season, and is valuable for florists' work, producing good clusters of good-sized pure white flowers.

I am pleased to note improvements in hybridizing in the Wichuraiana class. The credit is due to Mr. Manda, of New Jersey, who has raised some valuable additions to this class. It is gratifying to note progress in the past year, and if we should continue to progress in the future, we must interest ourselves in the raising of roses suitable for our climate in the garden, as well as varieties for the florist, in the rose house. It is sometimes said our life is too short to wait to raise roses, but it proves long enough to wait to see others raise them. The florists, nurserymen and all interested in the sale or growing of roses, should take a deeper interest in the rose; it is for their benefit to do so. By entering into the matter with a proper spirit, we could produce our own roses to supply the demand here, and not depend on other countries to supply us.

In conclusion, I hope favorable action may be taken by the Rose Society to create and cultivate a greater interest in the cultivation of the rose by the masses of the people of this great country.

In the discussion that followed Mr. Craig called attention to the polyantha rose Mosella which he considered of exceptional merit. It opens its flowers freely, never producing a congested bud, and in this respect was superior to Soupert. He had found it perfectly hardy at Philadelphia. He believed that Clara Watson had a future as a forcing rose, and that it possessed very great merit.

Election of officers was then taken up and the ballot for president resumed in 126 votes for W. F. Gude, Washington and 65 for E. M. Wood, Natick, Mass. On motion of Mr. Wood the election of Mr. Gude was made unanimous. The ballot for vice-president resulted in 180 votes for A. Donaghue, Omaha, Neb., and 27 for Thos. J. Grey, Boston. On motion of Mr. Grey, Mr. Donaghue's election was made unanimous.

Secretary W. J. Stewart and Treasurer H. B. Beatty were re-elected by unanimous votes.

At the conclusion of the election, there were loud calls for Mr. Gude and he responded in a brief speech of acceptance, that was received with rounds of applause. He felt his election to be the greatest honor that had ever come to

him, and also the greatest surprise. He thanked all for their confidence in him and said he would spare no effort to keep the society in the front line of progress.

The question box was opened and a paper by Mr. C. L. Allen was read in response to the question "Where shall our future supply of bulbs come from." He expressed the belief that nearly all the bulbs now imported can be profitably produced in this country and that the only reason they are not now grown here was that we had been told so often, our soil and climate were unsuitable that we had come to believe it. He believed we had every soil and every climate in our great country necessary to produce any of the imported bulbs and that it was simply a question of intelligent effort and trial.

Mr John Reek spoke of the cheap labor in Holland and stated that last year tulips were sold there as cheaply as $1 a a bushel.

Prof. Rane thought that Americans should study concentration of area and produce more from a given space, that this was economy in other directions, than space alone.

In response to the question as to best storage house for bulbs, Mr. William Scott thought that the proper storage house for bulbs was out of doors. He said his views had been frequently printed and briefly reviewed, and the method described by him in his Seasonable Hints in the AMERICAN FLORIST.

Mr. George King read a paper on dethorning roses in response to a question on that subject. He noted the fact that a few varieties were already thornless and he thought that by experiment a method could be found by which roses could be produced with thornless stems and that this would be a decided advantage in many ways.

Thursday Evening.

The report of the Fire Insurance committee was presented, showing progress made toward the organization of a mutual fire insurance company. Mr. William Nicholson then read his paper on the carnation as follows:

New Carnations from the Commercial Standpoint.

BY WM. NICHOLSON.

[Read before the Society of American Florists at the Providence Convention.]

MR. PRESIDENT AND GENTLEMEN OF THE SOCIETY OF AMERICAN FLORISTS:—I have been asked to give a discussion upon the merits of new carnations as seen from a commercial standpoint. This, I can assure you, is a very difficult task on account of the many different standards by which a person may be governed. As soon as you put your pen to paper you are bound to step upon some one's toes, thereby raising a hornet's nest about your head. But indeed you were only giving your own views and experience, in so far as it concerns your own market.

I think you will all allow that that which will sell in one market will not take at all in another market. For instance, Della Fox, which has won as many laurels as any new carnation sent out, is a complete failure in the Boston market as a commercial carnation. By this you will all see that the discussion of new varieties is a very serious task. I will try to give you a few notes upon the manner in which I have seen them growing, taking the Boston market for my standard. What is a good commercial carnation? I think the best answer to this question will be to give you a synopsis of what we saw upon our pilgrimage to the carnation convention at Cincinnati last February.

During the convention a great many important subjects were discussed. You will find a particular account in the records of the American Carnation Society, of which I hope you all have copies, but if you have not got one you may receive a copy at once by becoming a member of the society. These records contain much valuable information to all those who are interested in carnation culture. I think you will all agree in placing this divine flower in the front rank of flowers for commercial purposes.

But to return to my story; there were three weary pilgrims travelling from afar and being desirous of further light in regard to the divine flower, thought that they would travel west instead of east this time, in pursuit of that knowledge. After embarking at Boston their first stop was at Niagara Falls, where they viewed with delight the grand work of the Supreme Architect of the universe and enjoyed a delightful sleigh ride on bare ground. Their next stop was at Buffalo, where all members of the "craft" are expected to call and take their first "libation" with that prince of good fellows, "Great Scott," whom you all know so well, and have heard so much from in his interesting notes in the AMERICAN FLORIST. On embarking again on their rough and rugged road to Cleveland, they met one Long by name, if short in stature, whose company they all enjoyed the remainder of the journey to Cleveland. Here again they had another addition in the person of the President of the Society of American Florists, Mr. Adam Graham, of whom, I think, all present here will unite with me in saying, the more we see of him the more we like him; with him were Mr. Gasser and other members of the "craft," all looking for more light upon the subject of carnation cultivation.

On arriving at Cincinnati we were met at the depot by that true and courteous "Sir Knight" Gillett, who extended to us a very hearty welcome. We were conveyed to the Gibson House to participate in the deliberations of the American Carnation Society and to enjoy the hospitality of the Cincinnati Florists' Club. The duties were many and various. The progress shown in the cultivation of carnations was marvelous.

Of course a visit to Mr. Witterstaetter's place was planned. The expedition was under the leadership of that fun-loving and careful guide, Ernst Asmus. We started out for Mr. Witterstaetter's place, the guide being careful to choose the pleasantest roads for the pleasure and comfort of his fellow-craftsmen. After arriving at our destination, upon looking around, we saw Evelina growing in all her glory. If she does as well in other localities as at home, for a white carnation, she will be a grand acquisition to the market. We also saw many seedlings of great promise, which, if they stand the test of trial, will be heard from later on.

After the close of the business meeting of the Carnation Society we started for Richmond, Ind., to see Flora Hill. This time the expedition was under the guidance of one whom you all know, as well as one who stands in the front rank as a grower and disseminator of new carnations, E. G. Hill. His hospitality knows no bounds, and it is a treat for any florist to visit his place, to see so many novelties and so many promising seedlings, all of which were in such splendid condition. We all felt well repaid for our journey.

I think that if more of our brother florists, instead of staying always at home and grumbling at what the society is trying to do for the best interests of all concerned, would make a tour around and see what other people are doing they would, I am sure, find it time and money well spent.

Our next destination was Lafayette, to see F. Dorner & Sons' place. For a man to say it is a treat to visit this place is but drawing it very mildly. The hospitality of the "Hoosiers" is boundless. It was indeed a treat to see the beautiful seedlings which we found growing there in such splendid condition. As growers and disseminators of new carnations you will all agree with me in placing him at the head of the list. I must say that I think he has some very fine seedlings in store for us next year, particularly in white, yellow, crimson and scarlet. His house of seedling carnations is a splendid sight. The progress that has been made in raising seedlings is indeed wonderful. From what we saw of his seedling Mrs. G. M. Bradt, which they sent out this spring, I should say that it is one of the future fancy carnations. We all came away with a very favorable impression of it as a commercial carnation.

On our return trip we called to see genial Charley Allen, who, I can assure you, it is always a pleasure to meet. Here one is always sure to find things in apple-pie order, and carnations growing in all their glory. This is particularly true of Scott. If you ask him how he does it he winks his eye and points to a small 4x6 house which stands a little way from his greenhouse. Charley is a firm believer in night soil, and I must admit that I have been quite converted to the idea myself. He has also something up his sleeve in the shape of a new white carnation which will speak for itself later on.

Under his leadership we visited the Cottage Gardens, one of the model establishments growing carnations. To meet and have a chat with Mr. C. W. Ward is well worth the time and a long journey, for he always has some treasure in store for you. Here we found a model system of packing and shipping plants and cut flowers. He also has some promising new seedlings which we shall hear of later on if they stand the test. Mr. Ward is a firm believer in giving them a three years' trial before putting them on the market. All of those present, if they have grown a few seedlings, know how few of them stand the third year's trial.

Of course a visit to New York would be incomplete without a visit paid to the Dailledouze Bros. Charley Allen calls them "the dear boys," but I would like to add something more and call them "the smart boys." From them one is always sure of a hearty welcome. Here one is sure to find the up-to-date methods for growing fancy carnations, 'mums and mignonette. It is always a pleasure to me to walk through their carnation houses, where everything is so neat and trim, and to enjoy a chat with the boys about the novelties, for, like the rest of us, they have to give most of them a trial. They have some very promising seedlings for the next year's trial, particularly one after the style of Daybreak, but a much more beautiful flower, which is saying a great deal.

In regard to what have seen in the line of seedlings in and around Boston, there are quite a number of good ones to be tried this year. Taking white seedlings into consideration, Peter Fisher's Freedom and Mr. Cook's Nivea are both very

promising, but one can not say how they will stand commercially until they have been tested. Mr. Fisher's Edith Foster has done very well in some places, but not so well in other places.

I believe that you must give them all a trial, so that you may feel better able to determine which of them will prosper with you and be profitable to grow for market. There is a wide difference between a commercial flower and an exhibition flower. In fact they form two distinct classes. I consider the Boston cut flower market one of the very best places to test the commercial value of a new carnation as a seller.

The exhibition held in Boston last spring was the means of bringing together a large number of people interested in the cultivation of carnations. There was a fine display of seedlings exhibited to compete for the silver cup, which was given by Joseph Breck & Sons, of Boston.

For next spring there is a promise of another prize by J. F. Galvin, of Boston. This, I believe, will bring together quite a large number of competitors. On looking around you will see many seedling growers on all sides. The seedling 9.9 9 of Peter Fisher, of Ellis, Mass., is a magnificent flower. If it does as well this year as last year I have no doubt that it will be one of the ideal future carnations.

I consider Eldorado one of the very best commercial carnations which has been sent out the last few years. Although it has never received a certificate I still think it ought to have one. There has never been a better selling or keeping carnation in the Boston market. To this carnation there is but one objection, that it is very liable to take rust, which objection can be overcome by a free use of fresh air slacked lime.

In closing my few remarks I will say that I have given a synopsis of what I have seen this last year in the way of new carnations. I can only repeat my former statement that a man must first test the novelties himself to find out if they suit his soil and market. What is considered a good seller in one market falls very far short of the mark in another. But you will always find this true, that the man who has No. 1 fancy carnations will never find much trouble in disposing of them at good prices.

In the absence of Mr. T. J. Johnston, his paper on the Retail Business was read by Mr. Henry Siebrecht. He told briefly of the progress made in developing the leading flowers to the high standard now demanded by retail buyers and the improved methods of conducting stores.

Mr. D. B. Long spoke on the advisability of organizing state societies in connection with the national organizations. He suggested as preferable the division of the country into three sections, east, west and south, a meeting of the national society to be held in one section each year, thus insuring a meeting in each section every third year.

Mr. R. Vincent spoke on the same subject and emphasized the axiom that in union there is strength.

The amendments to the constitution and by-laws recommended by the executive committee were with slight changes adopted as follows:

Add to article 1. "And ornamental horticulturists."

Substitute for section 3, Treasurer. "The treasurer shall have charge of the funds of the society and shall pay all bills when same have been approved by the secretary. He shall make all transfers and investments under the direction of the executive committee, and shall keep correct record of receipts and disbursements, rendering an account of the same annually to the society, the same having been duly audited at the preceding meeting of the executive committee. He shall give bonds in such sum as the executive committee may from time to time deem sufficient, and shall receive for his service a salary to be fixed by the executive committee. Should a vacancy occur in the office of treasurer the president shall appoint a treasurer pro tempore."

Substitute for section 4. Fees and assessments. "The payment of $30 shall secure a life membership in the S. A. F. and exempt from all future assessments. Any eligible person may become a member of the Society of American Florists for the current year by the payment of $5, and such membership may be continued by the payment of an assessment of $3 in advance each consecutive year. Any annual member in good standing may become a life member by the payment of $25."

Substitute for section 6. State vice-president. "It shall be the duty of each state vice-president to make an annual report to the society of progress any interesting horticultural events that have occurred in his state during the preceding year, to assist the officers in the discharge of their duties, and in general to promote as best he can the welfare of the national society. He shall be the accredited representative of the S. A. F. at all meetings and exhibitions of importance in his state."

Substitute for section 9. Order of business. "The transaction of business shall be in the following order: 1. Calling to order. 2. President's address. 3. Report of secretary. 4. Report of treasurer. 5. Report of state vice-presidents. 6. Report of standing committees. 7. Report of special committees. 8. Unfinished business. 9. New business. 10. Adjournment.

Add new section. Reserve fund. "Money accruing from life membership payments shall form a reserve fund, the interest of which may be appropriated annually for general or specific purposes.

The proposition to add the words "Ornamental horticulturists" to the name of the society brought out a vigorous discussion, but was finally adopted.

In response to an inquiry as to the best remedy for black spot on roses, Mr. May recommended plenty of ventilation and the avoidance of a close stagnant atmosphere as preventives. He knew of no remedy.

Novelties, their place in the trade was answered in a communication from Mr. Grove P. Rawson. He said the introduction of novelties was generally a matter of dollars and cents, but there was often a lack of sense in offering novelties that have no merit but novelty. There was certainly a place for good novelties and through them the trade progressed.

A unanimous vote of thanks was passed to President Graham and the other officers for their excellent work during the past year. In the final resolutions, the thanks of society were extended to the florists and citizens of Providence, to the mayor, to Mr. Timothy McCarthy, to Superintendent Chappell, to the Providence Athletic Club, to Governor Dyer, to the superintendent of Roger Williams park and to the press of Providence. The convention then adjourned to meet in Omaha next year.

The Trade Exhibition.

The display of florists' supplies, trade implements, etc., may not be the largest, in the history of the Society, but without a doubt the exhibit of decorative plants was never equalled, all the leading firms being well represented by large displays of palms, dracænas, crotons, etc. in fact a full line of useful plants, and never before have the plants shown been better grown or of the sizes more useful to the general trade. In a two hours survey of the exhibition we noted the following and trust that few if any exhibits escaped our notice.

Mr. C. W. Ward, Queens, N. Y, staged a large variety of well grown geraniums in 6 and 7-inch pots. The most striking of the many varieties were M. Bruants, a fine two-colored flower of the Souvenir De Mirande type; Gertrude Pierson, pink; Snowdrops, white; Mme. Jantine, peach blossom pink; Mme. De Larux, pink; H. Dauthenay, red; Countess D' Harcourt, white; Alfonse Ricard, scarlet, (very fine); Acteon, vermillion; Marvel, deep scarlet.

Henry A. Dreer, Philadelphia, occupied one of the center tables and his display of palms of all sizes, ferns and other decorative plants was certainly grand. He also had in a tank in the convention hall a beautiful display of aquatics, including nymphæas of rare beauty and the well known Egyptian lotus. At the head of the stair was also a pair of extraordinary kentias, belonging to Mr. Dreer.

Thomas W. Weatherd's Son, New York, exhibited some handsome little models of their various heaters.

L. B. Brague, Hinsdale, Mass., display of evergreens.

H. Bayersdorfer & Co., Philadelphia, occupied one entire table with their varied collection of fancy florists' supplies. There were baskets to suit all tastes and purses, wreaths, wheat sheaves, flower stands, pot covers, in fact everything and put up in fine shape.

John C. Moninger Co., Chicago, exhibited a model greenhouse of cypress material with ventilator.

Hitchings & Co., New York, had on display their new tubular boiler which has the advantage of being taken in small, easily handled sections and should be for what it is designed, a dandy.

N. F. McCarthy & Co., Boston, had a corner to themselves in which were displayed every requisite a florist needs, including the "Boston Florist Letter."

J. Horan & Son, Bridgeport, Conn., had samples of their Perfect Carnation Support demonstrated on some "real live" carnations.

Emil Steffens, New York, was there with his fine assortment of wire designs including some novelties.

Carl Hagenburger, Mentor, Ohio, had but one plant in the show. It was a coleus of rare beauty and finest thing the writer has seen for many a day. The raiser and the writer, then and there, over a glass of ginger ale, christened it "Klondike,"

W. L. Ward, Salem, Mass, exhibited cocoanut fibre in all its stages from the covering of the nut to the finest powdered article.

L. H. Foster, Dorchester, Mass., made a fine display of the nephrolepis now so well known as Bostoniensis. They were fine plants.

H. Littlefield, Worchester, Mass., showed a small collection of palms and ferns, rubber hose, sprayers, high grade bone-meal etc.

Robert Craig, Philadelphia, made a grand display of decorative plants, palms of all sizes and variety, ferns, notably Nephrolepis davallioides furcans and N. D. multiceps, Pandanus utilis and Veitchii. There was nothing more admired or more

strikingly beautiful than Mr. Craig's wonderful display of crotons and what may be surprising a dozen of these magnificent plants were growing in pure Jadoo and looking equally as fine as those grown in ordinary soil.

C. D. Ball, Holmesburg, Pa., had a fine collection of the commercial line of palms, araucarias and cycas. Noticeable in the perfectly grown collection were some little gems of Livistona rotundifolia.

Pitcher and Manda, Short Hills, N. J., had a large collection of palms of all sizes, ferns, pandanus, and some finely grown dracænas. Among this collection all of which was fine, was a novelty in the Begonia Rex line, a finely spotted novelty named "Providence."

American Jadoo Co., Philapelphia, had a very tastefully arranged display of their specialty, also Jadoo in liquid form and in every form of package for shipping their growth promoter.

C. H. Joosten, New York, made a good display of Dutch and other bulbs, insecticides, and some very strong American grown roses on their own roots.

F. R. Pierson Co., Tarrytown, N. Y., made a fine display of bulbs, both Holland and Bermuda, ferns, palms, araucarias and other decorative plants. In this collection was a fine plant of Heliconia illustrus rubicaulis.

The Storrs & Harrison Co., Painesville, Ohio; had a few bundles of hardy roses, remarkably strong.

Joseph Heacock, Wyncote, Pa., staged a moderate sized collection of kentia and areca palms, all in fine form.

H. Thaden, Atlanta, Ga., exhibited a carnation support. A sample should be seen as it is in the writer's opinion a good thing.

Benj. Chase, Derry, N. H., had an exhibit of his plant stakes and labels.

J. Arnot Penman, New York, had a handsome display of the several publications with which his name is identified, Nicholson's Dictionary of Gardening being of course most conspicious.

D. B. Long, Buffalo, was there with samples of his usetul floral albums and plants of his Risley Flats smilax.

The Crowl Fern Co., Millington, Mass. made a neat exhibit of laurel, ground pine and mosses; they looked cool and refreshing.

The Scabcura Dip Co., Chicago, showed their nickoteen preparations in many forms.

A. Herrmann, New York, made his usual fine display of metal wreaths (home made), cycas leaves and many other florist requisites.

W. H. Ernest, Washington, D. C., made a small exhibit of standard flower pots, orchid pots and fern pans.

Codeley & Hays, New York, exhibited samples of their useful indurated fibre flower jars.

Siebrecht & Son, New Rochelle, N. Y., had a mammoth collection of most everything in the decorative plant line. There were rubbers, palms, ferns, pandanus, araucarias, sweet bays and as Wr. J. Austin Shaw so poetically says, "What aint there in our lot?" It was a fine collection.

The Herendeen Mfg. Co., Geneva, N. Y., had on exhibition one of their 8½ boilers adapted for either steam or hot water.

A. H. Hews & Co., North Cambridge, Mass., had a large display of their well known earthenware goods, standard flower pots, orchid pots and pans, some immense lawn and garden pots and vases of very elaborate design, also a number of beautiful fanciful jardinieres.

The Lockland Lumber Co., Lockland, Ohio, represented by Mr. Giesy, had samples of their cypress bars, but really their principal display is Mr. Giesy himself, whose light avoirdupois is more than compensated by phenomenal "get there."

E. Hippard, Youngstown, Ohio, showed how his standard ventilators work.

Joseph Breck & Son, Boston, Mass., had a display of bulbs, seeds, insecticides, fertilizers, and many sundries useful to the florist.

Wm. A. Bock, North Cambridge, Mass., showed a small collection of ferns and palms.

The Quaker City Machine Co., Richmond, Ind., had a handsome demonstration of their Challenge Ventilator.

Thomas Grey & Co., Boston, exhibited lawn mowers of several designs and other horticultural implements.

The Plenty Horticultural Works, New York, erected an 8 foot section of an equal span, iron frame, commercial house with upright glass on sides, without plate or anything to abstruct light. There seems little room for improvement in this modern house; also the Howatt hot water boiler.

Clark & Sawyer Co., Worcester, Mass., exhibited a florist's refrigerator which they call "The Alaska"; it makes one chilly to look at it.

J. C. Conroy, Providence, showed his hot water heater "The Winchester."

John A. Scollay, Brooklyn, had on hand one of their well known steam boilers adapted for greenhouse work.

W. A. Manda, South Orange, N. J., showed a useful collection of commercial sized palms and dracænas, also a very fine canna of an orange scarlet shade, named Robert Christie.

Clucas & Boddington, New York, displayed a large lot of Lilium Harrisii which was of the highest grade.

Lemuel Ball, Wissinoming, Pa., displayed collection of moderate sized palms, clean and good.

E. A. Ormsby, Melrose, Mass., demonstrated the effectiveness of his apparatus, by a long run of ventilators which seemed to work perfectly.

Last but not least was a grand pyramid six feet high of Farleyense ferns in the convention hall. These were from Pitcher & Manda, Short Hills, N. J.

The awards at the trade exhibition were as follows:

Class A—Plants. Certificates of merit to Robert Craig for fine crotons; to Siebrecht & Son for palms, ferns and decorative plants. Honorable mention to Pitcher & Manda for decorative plants; same, certificate of merit for pyramid of Farleyense ferns; honorable mention to W. A. Manda for miscellaneous plants and orchids; same, bronze medal for fancy caladiums; honorable mention to F. R. Pierson Co. for decorative plants; same, certificate of merit for extra fine nephrolepis ferns; certificate of merit to H. A. Dreer for decorative plants; same, bronze medal for aquatics; bronze medal to Sam'l W. Lewis for conifers; silver medal to Oaks Ames for aquatics; to Swan Point Cemetery for fine conifers in pots; to same for American grown rhododendrons and azaleas; bronze medal to Alex. McLellan for group containing Lomaria blechnoides and Anthurium Veitchii; certificate of merit to Cottage Gardens (C. W. Ward) for Zonal geraniums in bloom; Following were highly commended: Charles D. Ball, decorative plants; D. B. Long, Risley Flats smilax; L. N. Foster, Boston fern; H. F. Littlefield, decorative plants; Lemuel Ball, decorative plants; C. H. Joosten, roses on their own roots; Storrs & Harrison Co., southern grown hybrid perpetual roses; Jos. Heacock, small collection of palms; Robert Craig, collection of palms.

Class B—Cut blooms: Certificate of merit to H. A. Dreer for collection of double petunias; honorable mention to H. A. Dreer for twenty-five varieties of cannas.

Class C—Heating apparatus: Certificate of merit to Hitchings & Co. for hot water boiler; honorable mention to Herendeen Mfg. Co. for steam boiler; highly commended, Smith & Thayer Co., boilers; highly commended, Plenty Horticultural Works, hot water boiler.

Class D: Honorable mention to Lockland Lumber Co. for cypress sash bars; to Plenty Horticultural Works for section of greenhouse; to Joseph Breck & Sons for general greenhouse supplies; to A. H. Hews & Co. for standard pots; to J. G. & A. Esler for hose; highly commended, A. T. Stearns Lumber Co. for sash bars, etc. The exhibit of the C. Moninger Co. unfortunately arrived too late to be judged.

Class E: Certificates of merit to H. Bayersdorfer & Co. for florists' supplies; to A. H. Hews & Co. for fancy earthenware; honorable mention to N. F. McCarthy & Co. for florists' supplies; highly commended, W. C. Krick for letters and inscriptions.

Class F: Certificates of merit to F. R. Pierson Co. for tulips, hyacinths, fuchsias, callas, narcissus, Bermuda lilies, and oxalis; to Clucas & Boddington for Harrisii and longiflorum lilies; honorable mention to Walter A. Potter & Co. for Harrisii, narcissus, callas, oxalis, Roman hyacinths; highly commended, C. H. Joosten, for Bermuda lilies, paper white narcissus, Roman hyacinths, Japanese lilies and freesias.

Class G: Certificates of merit to Thos. W. Weathered's Son for model boilers with improvements in dome and shaking grate; to Clark, Lawyer & Co. for refrigerator; to Thomas J. Grey & Co. for florists' requisites; to Cordeley & Hayes for papier mache jars; to J. A. Penman for florists' literature; honorable mention to E. J. VanReyper for glazier points; to C. H. Joosten for fostite; to American Jadoo Co. for jadoo fibre for growing plants; to Skabcura Dip Co. for nikoteen insecticide; to C. W. Werner for reed flower vases; to W. S. Ward for cocoanut fibre; to Thaddeus W. Lawrence for wire support; to Crowe Fern Co. for florists' ferns; to A. Herrmann for metal designs and cycas leaves; to H. F. Littlefield for hose and florists' requisites. The following were highly commended: E. Hippard, ventilating shafts; Jos. Breck & Sons, florists' requisites; W. H. Ernest, flower pots; L. B. Brague, evergreens, ferns, etc.; D. B. Long, floral photographs; Benjamin Chase, labels; James Horan, carnation support.

The Bowling Tournament.

This was rolled on the alleys of the Providence Athletic Club Thursday afternoon, the first teams starting exactly at 3 p. m. and from that time until 12 p. m. the air was full of the shouts of the strike and spare makers, and the din of falling pins. There were four alleys, Buffalo, Providence, Fall River and Pittsburg were the first contestants. The other teams were New York, Flatbush, Cleveland, Boston and Philadelphia. It was decided that any team not making six

hundred in their first game was to drop out.

At the end of the first contest Buffalo and Providence failed, but on account of sickness of two of their men were allowed to continue. Buffalo dropped out, however, at the end of their second game. New York, Cleveland, Flatbush and Philadelphia then bowled, after which Cleveland dropped out. The alleys were fine, the space about them roomy, but it was uncomfortably crowded by the friends of the players desiring to see the match. There was rooting ad libitum, loud, long, explosive, of every conceivable kind. The Boston delegation had hopes and great lung power and did manage to get second place from Pittsburg, McRory in the last game putting up 192, the highest individual single score of the match. The best average for three games was won by John Habermehl, of Philadelphia.

The Evans Challenge Cup was won by the Philadelphia club with a score of 2,501, Boston winning second prize with 2,384, and Pittsburg third prize with 2,331. There were refreshments for all and Mr. Rennie, of the committee in charge, was untiring in his efforts to have everything pass off pleasantly. It was one of the best affairs of the kind ever held in connection with the meeting of the convention.

The score was as follows:

PHILADELPHIA.	1st game	2d	3d	total
G. Anderson	131	148	123	402
R. Kift	169	118	164	451
J. Habermehl	145	173	135	453
J. Walker	107	161	152	420
C. Longivatti	130	188	114	432
D. Rust	132	95	116	343
Totals	814	883	804	2501
BOSTON.				
W. Elliott	144	121	141	406
D. McRory	110	108	162	380
L. Foster	130	116	101	347
Driscoll	134	158	101	393
G. W. Patton	114	164	140	418
G. Sutherland	130	118	192	440
Totals	762	785	837	2384
PITTSBURG.				
J. Ludwig	155	128	146	429
H. Kroder	140	96	107	343
E. Ludwig	110	127	147	384
E. C. Reineman	115	122	152	389

Buffalo played two games.

The Election.

Mr. W. F. Gude, of Washington, the president-elect of the Society of American Florists, is a young man who by industry and strict attention to business pushed himself rapidly to the front during recent years. He is enthusiastic, progressive and enterprising, and being also possessed of sound judgment will undoubtedly prove a very acceptable chief officer.

Mr. E. M. Wood, who was also nominated for the presidency, is the proprietor of the famed Waban Conservatories, Natick, Mass., always a prime attraction to visitors to Boston. Mr. Wood is a genial gentleman of generous impulses and his motion to make the election of Gude unanimous was a happy finish to the contest. Though a member of the society since 1890, Mr. Wood has rarely attended the conventions, and therefore lacked an extensive personal acquaintance with the members.

Mr. Donaghue, the vice-president-elect, is a leading florist of Omaha and can be depended upon to ably fill the position to which he has been elected.

Secretary Stewart and Treasurer Beatty need no introduction to our readers.

New York to Providence.

When the splendid steamer Plymouth left the dock in New York for Providence over 150 delegates to the convention were on board, many delegations having arranged to travel with the New York party from that point. The weather was ideal and the ride up the sound was most thoroughly enjoyed by all. The party had a view of New York from both west and east, passing under the great Brooklyn bridge and up East River, past Blackwell's Island, and other islands devoted to public institutions and through Hell Gate into the sound.

The delegates were generously entertained with an elaborate dinner on the boat by the New York Florist Club, and good fellowship was manifested in every direction. It was a late (or early) hour before many retired to their staterooms.

Boston.

BUSINESS QUIET —WEEKLY EXHIBITION AT HORTICULTURAL HALL —JAS. BARRETT RETURNS FROM CALIFORNIA.—GARDENERS' AND FLORISTS' CLUB SPECIAL MEETING.—VISIT TO WARREN HEUSTIS & SONS' FARM —MANY STRANGERS IN BOSTON.

Business is dull in this city, so dull that no one can make it an excuse for staying at home this week. Many have taken advantage of the opportunity to combine pleasure and profit by attending the Providence meeting and the interest aroused by the candidacy of several gentlemen for the presidency of the S. A. F. also helps to swell the Boston representation at the convention. A little shipping trade is going on at all the wholesalers', this being the height of the fashionable season at summer resorts and the busy time with the florists who are located at these places. Good roses still sell well, but there are not many to be obtained.

The display at Horticultural Hall last Saturday was very pretty and there were many visitors but nothing remarkable or especially new was exhibited. M. H. Walsh showed a fine group of seedling phloxes and there was also an elegant collection of phloxes from Wm. Thatcher. Gladioluses from J. Warren Clark, montbretias from Bussey Institution and C. W. Hoitt, mimulus seedlings and salpiglossis from G. A. Oliver, outdoor-grown carnations from W. N. Craig and dahlias from W. C. Winter and John Parker were all very good. Fruit and vegetables occupied considerable space, variety large and quality excellent.

An interesting and interested visitor to the Hall was James Barrett, for many years a well-known employe at the old Hovey nurseries in Cambridge. "Big Jim," as he is familiarly known, went away to Pasadena, California, nine years ago and has been missed, for he was popular with all, and the boys were glad of the privilege of shaking hands with him once more. He proposes to settle down here again. Before leaving Pasadena he was given a farewell banquet which was participated in by about eighty gentlemen and was a most successful affair in every respect.

A special meeting of the Gardeners' and Florists' Club was held on Thursday, August 11, at Marliaves. Its object was to consider how the members of the club could best work in harmony at Providence and secure such action in the national society as to effect measures that would meet with the approval generally of the craft in this neighborhood, but it was also a very pleasant little reunion and with an abundance of good things in the line of refreshments, the social qualities of those present found good opportunity to expand.

The Garden Committee of the Mass. Horticuttural Society made a very enjoyable visit to the farm and market garden of Warren Heustis & Son at Belmont on Friday last. The many features of this interesting and successful establishment were inspected under the lead of Mr. Heustis and then came a collation that fitted just right. By an unanimous vote Mr. Heustis has permission to do it again.

Within the past few days Boston has been honored by the presence of many ladies and gentlemen from a distance who stopped over here on the way to Providence. Quite a party from Pittsburg showed up on Monday, also Messrs. Hart and Pentecost from Cleveland, and during the previous week Mr. and Mrs. A. M. Herr of Lancaster, Pa., and Mr. W. R. Smith of Washington were here. Mr. Smith was greatly interested in the many improvements in Boston's park system.

Ed. Hatch will hold a big plant sale in Horticultural Hall on September 22.

Chicago.

BUSINESS QUIET —BEAUTIES SELL WELL. —CARNATIONS STILL SHORT.— CARNATIONS UNDER GLASS IN SUMMER.

The market this week has been very quiet. Local demand is extremely light, with calls only for a limited supply of the choicest grade. In consequence roses have taken a decided slump, more particularly in the small teas. Good Beauties are still selling well and bring fair prices, $1 to $1.50 per dozen for the best. Fine Kaiserin brings $4, with good stock going at $3. But the bulk of the rose stock, which is nearly doubled this week, is now a perfect glut. Short stemmed stuff goes for anything that is offered; best select quality quoted at $2.

Carnations are still short and sell readily at 50 to 75 cents. The market is almost entirely confined to field grown flowers. All the old stock has been cleaned out with few exceptions. Most of the growers have their houses prepared for

planting and a few are already benching their stock. The carnation fields are looking well; the plants are uniformly healthy, but not as large in most localities as they were at this season last year. Still, as the plants are clean and stocky, the prospect appears good for a full supply next season.

Few growers attempt growing carnations in summer under glass. W. N. Rudd, however, has four houses planted which are looking very fine; two of these having been planted rather late, show up rather small plants, but perfectly healthy and vigorous otherwise. Jubilee, of which variety there is one house, is doing fine; another house is grown to Flora Hill and one to Mayor Pingree. Besides these a number of the new varieties in more or less number are having a trial.

Pittsburg.

BUSINESS IMPROVED.—FLOWERS PLENTIFUL —OFF FOR PROVIDENCE.—MR. BREITENSTEIN CLOSES HIS STORE FOR SUMMER.

The past week has been a little better for business in that the florists have had two days of good trade. On Thursday the trade was fair while on Saturday it was quite brisk; several of the florists in the Allegheny Market sold out all of their stock, something they have not done for sometime. Flowers are plenty with the exception of carnations, they are scarce and first-class ones are hard to get.

The members of the club started off in great shape on the 12th for Providence, about 35 constituted the party; postal received from Mr. Julius Ludwig states they enjoyed their ocean trip very much and several had a practical experience of sea-sickness, but all were in good condition for the S. A. F. convention.

Mr. Walter Breitenstein, Smithfield street, closed his store and went on a vacation. He will re-open on September 27. His experience of last year's trial of closing for a time during the summer proved satisfactory enough for him to repeat it this year.

The Phipps Conservatories are looking very well indeed this summer, being greatly improved over last year in every department. In the water lily houses the arrangements have been altered for the better very much. The pond or basin in the nymphæa house is all in one now instead of being subdivided as formerly into many compartments with walks between them, and is planted with many varieties of aquatic plants. Among them are Nymphæas Columbiana, Deaniana, Zanzibarensis, dentata, rubra, elegans, Leydekerl rosea (a French hybrid and one of the best bloomers), and Sturtevanti, delicatisima, gracilis, and Devoniensis. Eichhornia crassipes grows all around the edge. Papyrus antiquorum, Thalia dealbata are also seen. Alocasia regalis had always been grown with the stove house plants, but this year it was tried in the water, with the result of a much better and larger bloom, and it is in every way a success. It is planted nearly in the center of the water space. There are four varieties of nelumbium, water poppy, etc.

In the Victoria regia house adjoining, the center, an oval basin, is filled with this most magnificent lily. The leaves are about 7 feet in diameter now, and Mr. Joe Spring, who is the foreman in charge of these conservatories, expects much better results next month, as they are increasing in size rapidly. He has succeeded in getting rid of the troublesome insect that heretofore ate holes in the leaves. This year they are entirely free from blemishes. Surrounding the pond are planted alocasias, crotons, dracænas, Cyperus alternifollus and many other tropical plants. The whole effect is very fine and is greatly admired.

The gloxinia exhibit is attracting marked attention, being a collection of 4500 seedlings, and their old plants in addition. The seedlings have turned out remarkably well; there is scarcely a poor one in the lot and many are as fine as one could wish.

The chrysanthemums are looking very well indeed and the exhibition of them is expected to be away ahead of the previous ones. Mr. Jones who has sole charge of them this year is to be congratulated on their fine condition.

Mr. Falconer has succeeded in getting quite a collection of fancy leaved caladiums, some of the varieties very beautifully marked.

Mr. James Semple, Bellevue, presented last week to the Phipps Conservatories a fine collection of cacti. The plants were large and included many fine varieties, and several were fine specimens of grafting four and five varieties on to the one plant. It is the intention to have a cactus house, and a collection of this interesting class embracing a great variety.

REGIA.

St. Louis.

MEETING OF THE FLORIST CLUB —ELECTION OF OFFICERS.—NEW MEMBERS.—DR. HALSTEDT ENRERTAINS MEMBERS.—CONDITION OF MARKET.—NO REPRESENTATION AT PROVIDENCE.— PICNIC OF FARMERS GARDENERS AND FRUIT GROWERS —VARIOUS ITEMS.

The regular monthly meeting of the Florist Club was a large and enthusiastic one, in fact the largest attendance of the year; every chair was taken and all present were much interested in the proceeding.

After the regular order of business was transacted the election of officers took place, that of president being first with the following four candidates in the field: Dr. A. S. Halstedt, R. F. Tesson, C. C. Sanders and W. F. Young. A very large vote was polled and after the ballots were counted it was found that Dr. Halstedt had been elected. Mr. Halstedt was then called upon to make a speech, which he did in a very happy manner, it being received with much applause.

The next in order was for vice-president, only two candidates John W. Kunz and Fred W. Ude, Jr., being in the field. Just before the balloting began Mr. Kunz withdrew his name and Mr. Ude was elected by a unanimous vote.

For secretary, Mr. Emil Schray having no opposition was elected by a unanimous vote. For treasurer J. J. Beneke was also elected by unanimous vote, having no opposition.

For the three trustees there were five candidates: H. G. Ude, C. C. Sanders, Max Herzog, Chas. Juengel and Frank Fillmore. After two ballots had been cast Max Herzog, C. C. Sanders and Frank Fillmore were elected. After the election the annual report of the secretary and treasurer was read. The reports showed that the club had a membership of 68 active members and also that the club is well off financially, the treasurer's report showing a balance on hand of $305.48. There is also coming to the club some $80 00 for special prizes from the last chrysanthemum show which is not yet paid, and the persons who offered these special prizes will be given one month more time to pay up before legal proceedings will be brought by the club.

Three applications for membership were received as follows: Frank Ellis, manager for the Mound City Cut Flower Co., George Windler, florist, and Theo. Richter, grower of Kirkwood. Our visitor was Fred Foster of Milwaukee.

After a very hot discussion over queries from the question box the meeting adjourned until Thursday, September 9, at which time the newly elected president hopes to see a large attendance.

After the adjournment a photograph was taken of the newly elected officers. Dr. Halstedt then invited all the members to the Hotel Rozier, where a fine spread with refreshments was furnished. We all had a good time till 9 p. m. when we went home after giving three cheers for the new president.

Trade in the cut flower line has improved a little since the cooler weather and stock is also looking better, especially roses. Some very good stock from young plants can be seen at all the wholesale houses. Bridesmaids, Perles, Kaiserins and Meteors are good in color and fine foliage, the best of them bringing 3 and 4 cents, with second quality going for 1 and 2 cents.

Carnations are scarce and the few that come in are very small, still they bring $1 per hundred.

Asters are very plentiful and are selling at 50 cents per hundred, with a few extra fine large, white going as high as $1.50; white has the call. Hardy hydrangeas are getting smaller and pinkish in color. Gladioluses are still plentiful and meet with very little sale.

Tuberose stalks are fine, with quite a demand at 3 and 5 cents each. Some good smilax can be had but the demand is light.

I regret very much to say that St. Louis will not be represented at the S. A. F. convention, not one reported at the club meeting who said they were going to Providence.

The fourth annual picnic of the Farmers, Gardeners and Fruit Growers Association of St. Louis county and city was held at Grueninger's Grove on the Olive street road. Everybody had a good time and the event was a grand success.

Otto Luecker of St. Paul, late foreman for R. J. Mendenhall, Minneapolis, Minn., was a visitor last week. Mr. Luecker likes St. Louis and may locate here.

J. T. Windt, the Bayard avenue florist, returned home last week after a very pleasant trip to California.

The bowling club bowled its regular three games Monday night with not a very good attendance. In the three games bowled Emil Schray was high man with 589. C. Beyer second with 588, Beneke thiro 553. The high single game was by Beyer with 232, Schray second with 223, Beneke third with 221. We hope for a better attendance for next Monday night. J. J. B.

Johnstown, Pa.

L. B. Hunt has removed his flower store to more commodious quarters on Franklin street. The store is neatly and attractively furnished.

Florist Neissner is putting things in tip top shape for the coming fall trade. Besides growing cut flowers, Mr. Nelssner devotes a great deal of his attention to palms. I noticed some excellent specimens of arecas and kentias. Mr. Neissner intends adding one more palm house.

A. Ackens & Co. report a brisk trade in funeral work and Mr. Adolph Stahl speaks quite encouragingly as to the general outlook. HOMO.

St. Paul.

TRADE FAIR.—ASTERS AFFECTED BY BLIGHT.—'MUMS LOOK WELL AT L. L. MAY'S.—NO ONE GOING TO CONVENTION. —NOTES.

While trade is not booming it is good for this month, the quietest in the year. Roses and carnations sell fairly well, while outside stock like gladioli, sweet peas, dahlias, asters, etc., is not in great demand. Funeral work constitutes the bulk of the business at present, but we look for a good business in other lines soon.

In roses Beauty, Kaiserin, Meteor and Testout are in greatest demand. Some carnations from old plants are still being cut which are of fair quality and meet with ready sales.

The summer has been very wet and outside stock has made a good growth. Asters are badly affected by a blight and three-fourths of the plants are dead or dying.

L. L. May & Co. have 3000 potted 'mums and about 8000 single stems in benches all looking very fine. They are now throwing out their old carnations from the benches preparatory to replanting. They are building a new violet house which they expect to fill with Marie Louise and California as soon as completed.

Ed. Behrens has torn down his old houses and is building two new ones 20x80 each. His place is located on Kent street, in the residence district.

Aug. Vogt has returned from Wabasha street to West Third street, in the store formerly occupied by C. D. Elfeldt, who retired some months since.

Hoitomt & Co. is the name of a new firm located at corner of Western and Selby avenues, in the store formerly occupied by Anderson, the hill florist.

L. G. Verzke, the genial manager of J. J. Hill's private place, showed me a fine display of grapes grown under glass by him. He grows a general line of plants and has a fine collection of orchids.

We hear of no one going to the convention. The time and expense are important items, and as many of our florists are in debt and struggling to keep along they cannot afford the expense. I hope the eastern brethren will bear this in mind and bring the convention to Milwaukee another year. FELIX.

Springfield, Ohio.

To be held up by four burglars at the muzzles of as many revolvers is a thrilling experience indeed, one which is likely to leave a lasting impression upon Mr. A. R. Aldrich, the High street florist. Fifty dollars and a silver watch was the booty secured by the daring desperados. It was on Saturday, the 14th inst., about 9 o'clock in the evening, when upon nearing Main street on Belmont avenue, on his way home, Mr. Aldrich was startled to see a revolver flashed in his face. Before he could fully realize the situation and gather his thoughts he was covered by three more revolvers and commanded to "shell out." There was but one alternative left, and that to obey the command. The robbers were very cool and deliberate about their work, doing a thorough job and without much ado.

Mr. Aldrich is about to commence building an additional house for chrysanthemums to cover 80x28. HOMO.

THE DIRECTORY and reference book for 1896 contains 335 pages, an increase of 64 pages over that of 1894.

San Jose, Cal.

BUSINESS FAIR.—BULB SHIPMENTS RECEIVED.—VARIOUS ITEMS —VISITORS.

Business has been fairly good during the week in this city and flowers have brought good prices. There has been quite a call for asters and roses. Carnations also have sold very well. We are receiving plenty of out door lilies, such as albums, rubrums, etc., and as a general rule they bring a good figure.

Sweet peas are still in demand but are of rather poor quality. Many of our growers have received their advance shipments of bulbs and have rushed the same along for early work. There is also a scarcity of good decorative plants in this neighborhood.

M. Chas. Navelet has had his store enlarged to meet his increasing trade. Mr. Navelet is going into the retail seed business quite heavily of late. His new store in Sacramento has proved a success.

The Garden City Floral Co. have their greenhouses all in the best of condition. They have some extra well grown chrysanthemums and roses which will undoubtedly prove very profitable this coming season. Their daily cut of carnations is also very large.

At Mr. Bourguignon's nursery we find that this large establishment is still sending in plenty of cut flowers to this market. His rose houses have just been replanted and are making a splendid growth. Mr. Bourguignon's cucumber house produced a great number of cucumbers the past season for which he received the highest market price. The palms and decorative plants are also looking well.

Mr. Geo. Lehmann who is the largest carnation grower in this vicinity is sending in large lots of Portias, Scotts and Daybreaks. He also ships his surplus stock to the San Francisco market.

Recent visitors: Emile Serveau of San Francisco, M. Lynch of Menlo Park, Lester L. Morse of Santa Clara and J. M. Kimberlin of Santa Clara.

FT. SCOTT, KANS.—The Bourbon Co. Horticultural Society was recently organized at a meeting in this city. J. B. Saxe is president and T. H. Smallwood is secretary.

PONTIAC, ILL.—W. J. Miller is about to build a new three-quarter-span house 9x80 for vegetables. He expects to have it completed by September 15.

FLORISTS' HAIL ASSOCIATION.

TENTH ANNUAL REPORT OF SECRETARY.

The number of members of the Florists' Hail Association at the close of this report is 705.

The risks assumed are as follows: Upon 2,488,592 square feet of single thick glass. Upon 5,741,098 square feet of double thick glass. An extra one-half insurance upon 136,912 square feet of single thick glass. An extra one-half insurance upon 239,669 square feet of double thick glass. An extra whole insurance upon 556,811 square feet of single thick, and upon 1,122,417 square feet of double thick glass, making it equivalent to a single insurance upon 10,067,209 square feet of glass.

The Reserve Fund consists of $3,000 in bonds and $2,215.26 cash in hands of the Treasurer.

The Amount of Emergency Fund on hand at the close of this report was $3,365.79, making the total cash balance in the hands of the Treasurer $5,581.05.

The Seventh Assessment levied March 1st, 1897, brought to the Fund consists of $5,353.68.

The Expenditures for Salary of Officers, Stationery, Advertising, Postage, etc., have been for the year $796.63.

The sum of $2,919.13 has been paid for losses during the year.

36,783 square feet of single thick and 6,232 square feet of double thick glass, belonging to members, have been broken during the year.

The percentage of loss has been 1 square foot of single thick glass broken to every 67 24,131-36,783 feet insured, and 1 square foot of double thick glass broken to every 921 713-3,116 square feet insured.

The especial feature this year is, that the loss on double thick glass has been unusually small.

The record for satisfactory adjustment of losses remains unbroken, and notwithstanding universal business depression, the Florists' Hail Association has grown more rapidly during the past year than at any time since incorporation, and it closes the 10th year of its existence with an average gain of insurance upon 1,000,000 square feet of glass annually.

JOHN G. ESLER, Secretary.

TRADE REMAINS DULL.—DONALD M'GREGOR CAPTURES FIRST PRIZE.—VARIOUS ITEMS.

Sweet peas, asters, carnations and a few palms and ferns furnish all the window display which the store men have energy enough to make and that is about all the use they have for flowers at present, for with the exception of an occasional funeral order trade may be said to be a thing of remembrance; but all are looking forward to a good fall trade and houses are being renovated and repaired in readiness for planting. Sweet peas have been unusually good this season and large quantities have been disposed of.

Mr. Donald McGregor captured first prize for gloxinias at the sweet pea show in Springfield. Alex Parks and E. J. Canning also made displays for exhibition only.

Mr. H. W. Field has been spending his vacation in the Nutmeg state, calling on A. N. Pierson of Cromwell during his trip, and reports everything in first-class condition.

Some nine hundred chrysanthemum plants were given away to children by the Horticultural Society at its July meeting for which prizes will be offered at the show. G. W. THORNILY.

DO YOU WANT a list of the cemeteries of the country that use trees, shrubs and plants largely in the ornamentation of their grounds and that are apt to be large buyers of these and other horticultural supplies? You will find such a list in our trade directory and reference book. Price $2.00.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By married man with some experience in greenhouse. Will advance by Dec. 1st $250 in the business. H. L. COOK, Sidney, Ill.

SITUATION WANTED—By first-class grower and decorator, position either in store or greenhouse. References No. 1. Address VERITAS, care American Florist, Chicago.

SITUATION WANTED—As grower or foreman on commercial place; 18 years' thorough, practical experience growing roses, carnations, 'mums, violets, bulbs. References. WORKER, care Am. Florist.

SITUATION WANTED—By first-class grower and decorator, 38 years old, single, German; 18 years' experience in all branches; sober. First-class references. Private or commercial place. GARDENER, care Mr. Centner, 503 Webster Ave., Chicago.

SITUATION WANTED—As grower of roses 'mums, carnations, etc. Can give first class references as to ability and character from past and present employers; age 22; single. Please state wages, etc. ROSEGROWER, care W. W. Coles Kokomo, Ind.

SITUATION WANTED—As assistant florist or gardener; private or commercial place; 12 years' experience in garden and greenhouse work; strictly sober, willing. Good references; age 28. Eastern states preferred. Address G J, care American Florist.

WANTED—5000 field-grown carnations leading vars. Lowest price. C. K SWENSON, Elmwood, Conn.

WANTED—Two gardeners for show, fern and palm house $20 and $25 and board. A. FUCHS, 3059-73 N. Halsted St., Chicago.

WANTED—At once, a good all around grower of general stock—no expert. Single man address REINBERG BROS., 51 Wabash Ave., Chicago.

WANTED—A competent florist to buy and make himself generally use ul in a florist store; Sept. 15th. DARDS, 44th St. and Madison Ave., New York.

WANTED—To rent first-class greenhouses, stocked, doing good business, near the lakes, U. S. or Canada. Address B E, 210 N. Ver. St., Danville, Ill.

WANTED—To buy a florist establishment of modern style with about 1800 feet of glass; dwelling connected. Write stating full particulars and terms Address Lock Box 5, West Toledo, O.

WANTED—A good man to take charge of commercial greenhouses, 6000 feet of glass; also management of store. Must be a good designer and decorator. Address, giving age, single or married, experience and references; state wages. A. FRENCH, Ottawa, Canada.

FOR SALE—Glass 10x12, never been used; less than wholesale prices Cash. Address J E S, care American Florist, Chicago.

FOR SALE—A flower business on a prominent thoroughfare in St. Louis doing a good and profitable business. Reason for selling, failing health. Address ST. LOUIS, care American Florist.

FOR SALE—Another lot good sound second hand 3-inch boiler tubes, 4 cents per foot. Secure them while they last; no shing better or cheaper for hot water heating. W. H. SALTER, Rochester, N. Y.

FOR SALE—In Warren, R. I., 5 greenhouses, nice 6-room cottage, barn, sheds, shops, etc.; about 10 acres of good land; young orchard, shade trees and grapevines. Greenhouses and cottage heated with hot water. Windmill supplies water over the premises. Can be bought on easy terms. Apply to O. H. NYE, Warren, R. I.

FOR SALE—Greenhouses at Madison, Wis; nearly new, contain about 6000 feet of glass, with large potting and sa e rooms. Have all modern appliances. The State University with 1800 students and large faculty, the state capital and federal offices, and a population of 18 000 inhabitants make it a most desirable location. There is but little competition. Madison wants a first-class greenhouse, and to the right man it is a rare opportunity. Will be sold at a sacrifice. Come and see for yourself, or address C. K. TENNEY, Assignee, Madison, Wis.

FOR SALE AT HALF ITS COST 18,000 ft. of glass, well stocked, convenient to New York City two-story dwelling, 9 rooms, all heated by steam. Good barn and dwelling for foreman. Paying business established 5½ acres of choice land. Electric cars pass the door. Ill health the cause for selling. For further particulars address B J, care American Florist, Chicago.

FOR SALE.

A SPLENDID OPPORTUNITY for a good live man with small capital. Lease and stock of eight greenhouses with dwelling, store, etc. Stock is in No. 1 shape. An old and well established business in a large and thriving western city. All for sale AT A BARGAIN. Ill health cause for selling. If you mean business address for particulars A A, care American Florist.

GREENHOUSES FOR SALE, CHEAP, AT RAMSEYS, N. J.

The W. J. Thurston range, consisting of two houses 103x16 ft., one house 130x20 ft., one house 105x10 ft 6 in., one house 130x11 ft 6 in., and one sash house 60x10 ft., all heated with Hitchings & Co.'s corrugated fire-box boilers, pipes and fittings, and, in addition to the above, the heating apparatus, consisting of two No. 17 boilers with pipes and fittings, is in place for one house 105x16 ft. and one house 134x20 ft. There are two potting sheds and a stable on the place, which consists of about two acres of land situated at Ramseys, N. J. The above property will be sold cheap to close the estate. Apply to W. J. Thurston, on the premises, or BARGAIN, care American Florist, Chicago.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

California Seed Crops.

There is not much to say regarding the seed growers other than that they are all now busily engaged in harvesting the crops, nearly all turning out favorably, much to their satisfaction. Semple's asters are now blooming and look fairly well. Sweet peas are the same as last noted, that is with few exceptions very poor. The onion harvest is now at its height and is proving very satisfactory. The harvest of Cupid sweet pea is also over and owing to the dry spring the crops will not come up to expectations.

METEOR.

ONION sets at Cincinnati are reported a good crop, price for yellows starting in at about $1.25.

S. B. HICKS, representing Cooper, Taber & Co., London, is now making his fall trip in the U. S.

WHILE the sweet corn acreage in Nebraska is reduced, it is thought the yield will be an average one.

AT Chicago the market gardeners have had so far a satisfactory season, most produce realizing good prices.

WEBER & DON, New York, report an active demand for spinach, which seems to be general throughout the country.

MR. E. SCHOETTEL of Vilmorin, Andrieux & Co., Paris, who is making his annual autumn trip, will arrive about October 1.

ONION sets at Chicago will be a fair crop and apparently of more satisfactory quality than last year. There is a good demand for winter or Egyptian onions.

INDEPENDENCE, IA.—The Rush Park Seed Company's losses by fire have all been satisfactorily settled. They received on the building $2,786,53, and paid by three different fire companies. On stock $7,179.25, divided among five companies. On fixtures $221.29. This makes a total amount allowed for damages by fire $10,183.07. They will probably rebuild right away.

Growing lily of the Valley Pips.

Can lily of the valley be grown for forcing pips in the climate of North Carolina? All information as to culture, soil, etc., will be appreciated by J. H. T.

Shading.

What is the best and cheapest shading for the outside of greenhouses for summer; liquid form? J. O. T.

DO YOU WANT a complete alphabetical list of carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1896. Price $2.00.

THE AMERICAN FLORIST'S
COLOR CHART
Is now accepted as the standard in preparing color descriptions, by many foreign houses as well as in America.

Wheeling, W. Va.

Pleasant Valley, a suburb of Wheeling, within a stone's throw of the Wheeling Park and reached by the Elm Grove line, is all that its name implies. Bordered on the west side by a lofty mountain, whose summit, to express it poetically "touches the horizon" and on the east by a rolling field dotted here and there with shrubs and trees, it presents an ideal place to roam about and to reflect upon the charms of nature. It is here, where Mr. Max Hess, former superintendent of the Wheeling Park, located his greenhouse plant about a year ago. Mr. Hess has acquired a tract of 75 acres of valuable ground, most of which has been improved and made suitable for the cultivation of fruit, ornamental trees and nursery stock in general, it being Mr. Hess' intention to embark in the nursery as well as in the flower business.

Four greenhouses, each covering 100x20, were built last fall and an additional house to cover 100x22 is now under way. All told, Mr. Hess will have a total of over 10,000 feet of glass. I may mention in passing that in point of construction and general adaptability, Mr. Hess' plant is decidedly of the most approved pattern, all modern conveniences, such as ventilating apparatus, concrete walks, neat and substantial benches, etc., having been adapted and applied to every house. In addition to the houses, and immediately adjoining them, Mr. Hess has built a fine office, which he has equipped and furnished with a view to comfort and convenience. His imposing residence, surrounded by a beautiful lawn and lofty shade trees, is by no means the least attractive feature about the place. The flower beds, ornamenting the lawn, are especially attractive and as I beheld them an idea suggested itself to my mind that if the florists throughout the country would realize the utility of what the sociologists call "the law of example" and make their own grounds about their greenhouses, however limited, inviting and attractive, a greater demand for bedding plants, bulbs and the services of the landscape gardener would follow as a matter of course. The old adage that a thing to be admired is to be seen holds true in this as well as in any other case.

Huscroft Bros. have commenced building four good sized houses for roses and carnations. They report a fair trade in funeral work and are encouraged with the general business outlook.

Zane & Son have overhauled their entire plant, making many substantial improvements and have added a 70 foot house.

Florist Hellstern, whose houses were damaged by fire last winter, has rebuilt and is now once again in shape to do business. Florist Handle does no longer handle flowers. He has closed his store and is out of business. HOMO.

Do YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1896. Price $2.00.

TRADE PICKING UP—CONDITION OF THE FLOWER MARKET.—SHORT SUPPLY OF PALMS—MANY HAVE GOLD FEVER.—CROWDS VISIT CONSERVATORIES—COMPETITION BY CHINESE GROWERS—VARIOUS ITEMS.

Trade has picked up a little during the week much to the satisfaction of all. Asters are coming in more freely now than lately and are selling very well. White asters sell much better than any other color, although Semple's pink and lavender are also in much demand. They are bringing about 15 cents per dozen, which is considered a fairly good price. Many short stemmed asters are in the market, but there is practically no demand for them whatever.

Carnations also have been called for more frequently than of late and selling fairly well considering the season. Plenty of Portias are to be had, also Scotts and whites. Daybreak is rather scarce and of poor quality. Portia will not be so plentiful for a year or two as it has been this season, as many of the large growers have discarded it completely, and have planted in its place Scott and Daybreak. There is quite a lot of amaryllis Belladonna, being sent to this market this season, in fact much more than can be disposed of. Plenty of lilies of all colors are also to be had at prices that hardly pay for the first cost of the bulbs. The Japanese growers are bringing in some extra fine stock of this flower.

In roses some very good stock is beginning to come in from some of the growers. Last week some extra good roses sold for 35 cents per dozen, but in most cases the average stock brings about 15 cents. The quality of the roses is improving every day and we will undoubtedly have some extra fine stock in the market in the near future.

Sweet peas are still hanging on and are yet to be seen in the florists' windows. They are not very good now as the season is so far advanced, and in many cases have lost their original color and form. Many of the retail florists are now looking around the different establishments for their stock of palms and decorative plants for the coming season. There seems to be a short supply of palms in salable sizes, and the fortunate growers that have a good stock are holding them at a high figure. Chrysanthemums are doing splendidly and promise well for a good supply of blooms.

Mr. Sidney Clack, who has been spending some time in the northwest has returned to Menlo Park.

Mrs. L. Pfunder and family of Portland, Ore., who have been spending several weeks in this state, have returned home.

F. G. Krauss was representing the Sunset Co. in Menlo Park last week.

Mr. John Gilmore, who has been foreman for E. W. McLellan for some time past, has resigned his position to accept a similar one with Mr. J. Pollet.

Not since the days of '49 has this city been so agitated over gold discoveries as it is at the present time. Thos. H. Stevenson, of 11 Powell street, caught the fever and sailed for Klondyke during the week. The business will be run as formerly under the management of Mrs. Stevenson.

Great crowds of people visit the conservatories of Golden Gate Park every Sunday and Supt. McLaren certainly has a very fine display of flowers and rare plants all looking in excellent condition.

Mr. John Carbone of West Berkeley has

BOUGAINVILLEAS.

GLABRA (?) AND GLABRA SANDERIANA.

These grand plants are bound to become **Leading Decorative Subjects.** The beauty and durability of their bloom (bracts) combined with their protracted flowering period—extending almost through the Florists' Season—make them specially interesting and attractive objects. The freedom and durableness of their bloom with quick recurrence of same may be truthfully described as wonderful. Our plants in past two seasons have flowered almost **continually** from Christmas to July, **entire heads** being available for late June Decorations.

Both varieties are strong, rapid growers, **very easily** handled, not subject to any insect pests and not at all particular as to temperature or treatment.

Every florist will want them, if for Easter plants only, as the ease and certainty with which they may be flowered, coupled with their other qualities, leave few rivals for that season that can be handled with so much satisfaction and profit.

For some opinions of the merits of these plants see

Mention the American Florist when writing to advertisers on this page.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

nearly finished getting his houses into shape for winter work. His stock is all in excellent shape and in the best condition possible. Brides, Maids and Testouts are the chief sorts planted. We also note some well grown plants of Beauty and Perle, all of which were making splendid growth.

Mr. James Forbes has returned to Portland, Ore., after a brief stay in this city. Mr. Forbes has sold out his interests in the firm of Morten & Forbes to Mr. Geo. Ernst formerly of Pelicano & Co. Mr. Forbes intends to open a store in Portland during the winter.

The representative of the Bell Conservatory Co. of Sacramento was a visitor during the week.

Looking through the establishments of the various Chinese growers we find that they have, as usual, quite a large quantity of chrysanthemums and violets growing, all of which will be brought into direct competition with the stock of the legitimate growers this coming season. In fact they seem to increase in numbers every year, and raising as they do a cheap grade of stock they put it on the market at almost any price, which causes a glut of poor flowers, proving very detrimental to retail florists and growers alike.

Mr. Kenneth S. Murray, foreman at M. Lynch's nurseries, has been under the weather lately but is able to be about again.

Mr. T. H. Douglas and wife, after a very pleasant stay among us have left for their home in Waukegan, Ill.

Mr. J. M. Kimberlin and family have been spending a few weeks at the seaside.

Mr. Sidney Clack, of Menlo Park, has gone on a business trip through Oregon and Washington.

Harry Papworth, of New Orleans, has been spending a few weeks in this state.

S. D. Woodruff, the seed grower, of Orange, Conn., has been with us looking over some of our seed farms.

Mr. Peter Rock has resigned his position in Golden Gate Park and is at present staying in this city.

Mr. Jas. Massen, who has been foreman of Sidney Clack's greenhouses for several years, has resigned. Jim was a genial fellow and will be missed by his friends in Menlo Park.

Mr. E. H. Bourguignon and family, of San Jose, have been spending the summer at Capitola.

Angelo Baldochi, of Podesta & Co., has returned from a vacation of several weeks at Santa Cruz.

The Japanese chrysanthemum growers, Domoto Bros., of Fruitvale, have completed the planting of their stock. It is in the pink of condition and they will undoubtedly hold up their reputation of former years as one of our leading growers.

Paul W. A. Grallert, our carnation specialist, is bringing in some very fancy carnations from his nursery at Colma. Mr. Grallert gives all the new varieties a very thorough trial every season and his stock always brings fancy prices.

Clear Cypress Greenhouse Material.

This *with us* means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

TO WIDE AWAKE FLORISTS:

Have you ever tried evaporating liquid tobacco to kill green flies in greenhouses? It would pay everyone who has not already tried it to give the process a trial. It is generally well known among rose growers that the old style of fumigating by burning tobacco in its various forms is ruinous to the flower crop of such roses as Catherine Mermet, The Bride, Bridesmaid and those types. The plan herewith recommended is cleaner, more convenient and does absolutely no injury to any rose buds, nor to the plants.

Our experience has taught us to use at least six (6) of our evaporating pans in a hundred (100) foot house. At first when we put this plan into operation we thought of evaporating tobacco juice as a preventive only, the same as the old and somewhat untidy style of strewing tobacco stems on the paths and under the benches; but we find that by using the number of pans to a house as above indicated it absolutely kills the pest, and there is hardly any perceptible smell in the house, and the roses retain their fragrance without taint or blemish.

These pans are threaded to be attached to an inch and a quarter pipe, or by the use of a **bushing** any smaller sized pipe may be attached. Our pan was awarded Honorable Mention by S. A. F. at Cleveland, O., in 1896.

TRY AT LEAST ONE HOUSE.

Price $1.25 each pan. For further particulars write

When writing mention the American Florist.

Everybody knows the "SPENCE" is a good hot water heater. They know it: 1st, because it *is* good; 2nd, because there have been so many opportunities to hear of its goodness, for the reason that there are so many thousands in use—more than any other hot water heater; 3rd, because it has been so long before the public. The Spence's reputation has been earned solely on its merits. *Catalogue?*

THE premium list has been issued for the second annual chrysanthemum show of the Waco (Texas) Floral Society, to be held November 10 to 12, 1897. Copies may be had on application to the secretary, Mrs. M. B. Davis, Waco, Texas.

DO YOU WANT a list of the cemeteries of the country that use trees, shrubs and plants largely in the ornamentation of their grounds and that are apt to be large buyers of these and other horticultural supplies? You will find such a list in our trade directory and reference book. Price $2.00.

THE PROVIDENCE CONVENTION.

The Excursion to Newport.

Never before on a similar occasion has promptness been so noticeable as on Friday morning. Nine o'clock was the hour announced for the departure of the steamer Day Star and at nine o'clock everybody was on board ready to start, with the exception of a special delegation from Boston which was due a few minutes past 9. These arrived on time, also, and at 9:15 the big steamer swung off bearing fully 750 excursionists. The weather was delightful and the charming scenery of Narragansett Bay was enjoyed to the utmost. The Providence boys had not wearied in their efforts to entertain and were still at it as fresh and enthusiastic as on the opening day of the convention four days before. There was an abundance of refreshments of all kinds. The boat was finely decorated with festoons of asparagus, gladioluses and asters and the Hedley-Livsey Band furnished excellent music without stint.

On reaching the dock at Newport after a delightful two hour's sail the wearers of the scarlet badges of the Florists', Gardeners' and Associates' Club of Newport were seen flitting hither and thither among an apparently endless line of barges and vehicles of every description, and as the big concourse poured out upon them from the boat it seemed as though they would overwhelm them but in due time the last visitor was comfortably packed away and the procession was soon in line for a ride through and around the city.

The route led to the Ocean Drive, twelve miles in length, with its panoramic views of palatial summer homes, beautiful villas and spacious surroundings. The charming loveliness of the private estates of the Vanderbilts, Belmont, Pierpont Morgan, Winans and other wealthy owners was a revelation to those who beheld them for the first time. Passing through the grounds of Mr. Jas. J. Van Alen, the procession wended its way through the magnificent estate of U. S. Senator George Peabody Wetmore, and a hasty view was obtained of the lawns and greenhouses there, which are said to be among the finest in the land. At a point on the shore drive, known as Indian Spring, the visitors and the local club were photographed in a group.

The afternoon was spent at Easton's Beach, where the visitors were entertained with a Rhode Island clam bake under a mammoth tent. The National colors were conspicuously displayed, and the table decorations were beautiful. Before dinner was served, President A. K. McMahon, of the Florists', Gardeners' and Associates' Club of Newport, extended a cordial welcome to the visitors. He said that the local club had organized for the purpose of receiving and entertaining the S. A. F. on this, its annual outing. They had provided the carriage ride in order that their guests might see some of the beautiful places in the city but, in order to realize what Newport is, it would be necessary to spend at least a week there. They had had only a glimpse at the beauties of the place. They were now surrounded not by woods and sand-hills but by the broad ocean and by one of the finest beaches in the country. Mr. McMahon went on to say that the company had gathered to partake of the hospitality of the club, and he hoped they would enjoy every moment of their time and that the pleasant recollections of their visit would induce them later to come back to Newport again.

When the menu had been disposed of the speechmaking was proceeded with. President McMahon introduced Hon. P. Boyle, the Mayor of Newport, who was greeted with a round of cheers. Mounting a bench he said that he hardly knew what to say other than to give expression to the pleasure and delight of this meeting. He would have been very much gratified to have met them at the gates of the city and welcomed them and assured them further that the people of Newport were very proud of the opportunity to show their appreciation of the members of the profession which has done so much to beautify our homes and their surroundings. In closing he said I am, like all Newporters, proud of our city but also very modest and therefore I shall not attempt to blow any horn for Newport, particularly as you have, through the courtesy of your brother members, seen some of its attractiveness. Being reminded by our chairman that remarks must be brief, I will close by extending to you again the freedom of the city and expressing the hope that you will come back to us. May you when you depart from here carry with you pleasant recollections of your visit.

Hon. C. W. Hoitt, being called upon to respond on behalf of the S. A. F., said: "Mr. Mayor, as you have extended the freedom of the city of Newport to the Society of American Florists, I can assure you, sir, that they accept it. As the chairman of your club was pleased to urge us to stay a week, I can simply say to him that we accept that, too.

"Now, Mr. Mayor, throwing aside all levity, I am pleased to stand here as the representative of the Society of American Florists and accept your kind welcome. I can assure you, sir, that our trip thus far has been a most enjoyable one. Nothing has been left undone that could have assisted in making this, for us, a most pleasant and enjoyable day. And I can assure you, sir, that this society will anticipate with pleasure the invitation you have so generously proposed to make, to hold one of their sessions here. On behalf

of the Society of American Florists I thank you, each and all of you who have so liberally contributed to our enjoyment here to day "

Mr. John P. Sanborn, of Newport, being called upon, after a cordial greeting, responded: Mr. Chairman, ladies and gentlemen: When I sat down here, at this table, the chairman came along and remarked to me that I would be expected to say a few words to you. The announcement gave me a feeling something like that of the fellow who was a out attending the funeral of his wife and was told that he must ride in the carriage with his mother-in-law. He replied: "If you say so I will do it, but it will spoil all my pleasure for the day." I have been reminded of what I heard a short time ago in regard to a certain congressman from the far west. He had never seen salt water, but by some means had been appointed by the speaker of the house on the Naval Committee. He was present at the launching of one of our great cruisers and, while on the vessel, sought to impress his admiring friends with his knowledge of nautical matters. They listened to him with wonder because they knew he had acquired all this knowledge since he had entered Congress. Passing along the deck he came to a hatch-way that happened to be open. He looked down into it, then threw up his hands and exclaimed, "Why, she's hollow!" Now it is gratifying for me to think that none of you here to-day are in that condition. If you are it is your own fault, for we certainly have tried to fill you up.

The speaker reiterated the good wishes expressed by the mayor, complimented the ladies and promised all the encouragement in the way of funds, etc., necessary to secure a convention at Newport equally as successful as that just finished in Providence.

President McMahon announced as the toast of the day, "The Retiring President of the Society of American Florists—Mr. Adam Graham." President Graham responded. He said: "When you did me the undeserved, unexpected and unsolicited honor of electing me your president I accepted the position, as many of you know, with great reluctance—not that I did not appreciate the honor, but because I recognized that it was undeserved and I doubted my ability to perform the duties of the position with credit and satisfaction to the organization. I recognized that you had in your ranks dozens of men who were better entitled to the honor and better able to serve the best interests of your society than was your humble servant. But you saw fit to differ with me in that opinion and by your partiality you crowned my head with the laurels of the society as president. At this time, when my duties have nearly ended and when within a few brief months my successor will have assumed the reins of office, I realize more than ever my indebtedness to these leaders in the profession for the generous support and consideration which I have received from them. The result has been that my pathway, instead of being filled with thorns, has been strewn with roses which have diffused their fragrance throughout the whole of my official career. Where I expected to meet difficulties they have been removed; everything has moved along harmoniously, and the result has been one of the best conventions we have had in years.

"Our friends in Providence have treated us royally. (The speaker was here interrupted by a round of cheers for Providence.) No delegate who has enjoyed the hospitality of that city during the week will go away without feeling satisfied and gratified that he had the good judgment to attend the meeting there. The work accomplished by our convention has been equal to that of many of the conventions within the last five or six years. I believe the members of the society have given closer attention to the business for which they met than was the case at some of our conventions; and for this I desire to thank them. To our friends of Newport who have crowned a week of entertainment with this royal reception I do not know that I can say anything more than that they have done a thousand-fold more than had been expected even of the city of Newport, which is saying a great deal (Applause.) In conclusion, I bespeak from you for my successor, Mr. Gude, the same kindly consideration and generous support which I have received at your hands. When you go to Omaha, to the prairies of the west, where you will meet the young blood of the florist profession, he will be a fitting man to act as president of the Society of American Florists. The younger element of the society is coming to the front and I think that we, the older members, should give it an opportunity and see what it can do in the wild and woolly west."

President-elect Wm. F. Gude, of the S. A. F., was here called upon. He did not think it would be proper for him to talk about what he was going to do for the benefit of the society or about how well he would succeed. The members of the S. A. F. could best judge of that twelve months hence, when they met at Omaha. The taking of the convention so far west with a young and inexperienced man like himself as president was quite an experiment, but it was worth trying. He continued: I think that any man, old or young, would esteem it an honor to be the president of such an intelligent, earnest, representative body as this. No more honorable body of business men can be found anywhere, and I am proud to be the head of such a grand organization. I hope that next year, when the society meets west of the Mississippi river, you will all encourage your young president by your presence on that occasion and by your best efforts to make the future of the society an assured success. Mr. Gude then added that he was not one of those who failed to see any benefit from attending an annual meeting of the society. He thought the members derived a great deal of good from their presence at the meetings. He apologized for the brevity of his remarks and concluded by thanking the members for his election and assuring them, one and all, that he would exert himself to the utmost of his ability to see that the convention at Omaha was a success.

President McMahon took occasion at this point to say that the credit for the reception given the visitors belonged not altogether to the men but to the ladies of Newport, and that the Ladies' Reception Committee was entitled to a large portion of it. Three cheers and a tiger were promptly given for the ladies.

The next feature was the presentation of a handsome gold watch, as a testimonial from many friends in the society to President Graham. Mr. Robert Craig, of Philadelphia, who was called upon as the spokesman, said: "Before I perform this pleasant duty, you will pardon me if I give utterance to a few thoughts that have been inspired since I came into this beautiful city of Newport. The first thought that seeks expression by me is one of gratitude to these gentlemen who have exerted themselves so grandly on our behalf. I can appreciate the work they have done and the details that have been so thoroughly attended to. I want to thank them and to say that these attentions are as grateful to our hearts as is the falling dew to the flowers of the field. I want to say to you also that I am filled with admiration at the advance that gardening is making here in this beautiful place. It was said by Lord Bacon that men begin to build stately before they begin to garden finely, because gardening is the finer art. So it is. I say to you, private gardeners of Newport, that there is a greater future for gardening than there is for architecture, that there is a greater future for gardening than there is for any of the fine arts; and I say to you that it rests upon you largely to live up to your opportunities. Napoleon said that the army that had the heaviest artillery was likely to be the successful one. It so happens that much of the wealth of America is centered in Newport; and, in proportion as you, private gardeners, do your duty, so will that wealth be poured out for the elevation of gardening.

"Now I will perform the pleasant part of my duty. Thirty-five years ago Adam Graham and I were boys together in Philadelphia, and it so happened that we both became interested in gardening. He went to the west and I stayed in the so-called slow city of Philadelphia. You can imagine, ladies and gentlemen, what a pleasant thing it is for me to-day that it should devolve upon me to hand to Mr. Graham, after all these years, this token of regard and esteem from the members of this association. We all know how earnestly Mr. Graham has worked; we all know how he has cast aside all selfishness and done all that in his power lay to advance the interests of this society. And this token comes to him from every member of this society, for every member is his friend." (Applause.)

President Graham here rose to respond but was compelled to wait several minutes while the entire assemblage joined in the refrain "For he's a jolly good fellow," which was followed by a tumult of cheers for the recipient of the gift. Mr. Graham then said: "My dear friends, I feel myself totally incapable of giving adequate expression to my appreciation of this generous token of your regard. Your beautiful present doubtless has considerable intrinsic value, but I would not belittle or dwarf the sentiment which has inspired it by any consideration such as that. It is the sentiment which it expresses that I prize, not its cost. If it comes from the hearts of the members of this society it will be worn near my heart and valued as my greatest treasure. If in my future life greater prosperity awaits me than I have yet known or expect to know, I shall never be so rich nor so proud that I shall fail to value this token of your love and esteem. If adversity overtakes me I shall never be so poor that I will allow myself to part with this dear token of your regard. And when I am called away my children, if they are worthy of their father, will not part with it either. My friends, your kindness and consideration for me have been far beyond my deserts. I can only thank you." (Applause.)

A handsome gold brooch with diamond setting was then presented to Mrs. Graham.

The shooting and bowling prizes were presented to the winners and a brief

WILLIAM F. GUDE.

President-elect Society of American Florists and Ornamental Horticulturists.

speech of acceptance was made by each recipient.

With another round of cheers for their hosts the assemblage dispersed to spend the remaining time in drives about beautiful Newport, walks on the beaches and dips in the surf.

President-Elect Wm. F. Gude.

We present herewith a portrait of the president-elect of the Society of American Florists, Mr. William F. Gude, Washington, D. C. Mr. Gude is the youngest man ever elected to the office, being now only in his 30th year.

He was born in Lynchburg, Va., January 4, 1868 and is of German parentage. His parents removed to Maryland in 1870 and having lost all their possessions during the war were not in circumstances to give their sons many advantages. The subject of this sketch started to work on a farm at the early age of 7 years, attending a country school three miles distant during winter when work permitted. At the age of 10 years he entered the employ of N. Studer, a florist at Anacostia, D. C., where he worked two years for the privilege of attending school for seven months in the year, working mornings and nights during the seven months. At the age of 12 years he received $8 a month, working in and about the greenhouses from daybreak till dark, sometimes till late at night.

When 18 years of age by working every other night he managed to take a night course in the Spencerian Business College of Washington and graduated with high honors May 30, 1888. July 1, 1889 he left the employ of Mr. Studer, having served him in every capacity, and August 5, same year he and his brother Adolphus established the firm of A. Gude & Bro. in Washington, with a small stand in the market and three greenhouses at Anacostia. Prosperity attended the venture, Mr. A. Gude growing the flowers and attending to the greenhouses and grounds and W. F. taking care of the selling of the product.

November 16, 1889 the young firm opened a store and for the first two years had rather discouraging experience. November 23, 1890 a cyclone blew an adjoining tall building over on to their store and others resulting in the loss of the fixtures and contents, the subject of this sketch barely escaping with his life. In this accident three persons were killed and two crippled for life. The firm then erected the building they now occupy, where they have had remarkable success in working up a fine business. In the meantime the greenhouses grew from the there small ones on a 2½-acre lot, to 90 000 feet of glass and 40 acres of land.

Though giving strict attention to every detail of his business Mr. Gude found time for the social side of life and is a member of the Masonic, Odd-Fellow and Elk fraternities. In Masonry he has reached high rank, being at present Capt. Gen. of DeMolay Mounted Commandery, and during the last presidential inauguration served with the rank of Colonel. He He is also a member of the Mystic Shrine as well as Knights Templar and was presented with a gold badge as chief officer of his Odd-Fellow Lodge in 1891. He was president of the Washington Florists' Club in 1892.

October 14, 1896 Mr. Gude was married, the bride being Miss Kathryne M. Loffler, daughter of a wealthy business man of Washington, and one of the wedding presents was a handsome new pressed brick 10-room house handsomely furnished, and located in the residence section of the city. On July 28 this year a bouncing baby boy arrived to enhance the happiness of the young couple.

Certainly fortune has been showering her best gifts on Mr. Gude and that he fully deserves them all who have met him will agree. He is too big hearted and broad minded to be spoiled by the smiles of fortune and to these qualities is undoubtedly due his great popularity.

In a personal letter he writes: "You may say that during 1898 I shall work just as hard for the S. A. F. as in my own business and I shall welcome suggestions from the members for advancing the best interests of the national society."

Echoes of Providence.

Not till you arrive home and ponder over the events and incidents of a convention do you realize how good a time, instructive as well as social, you have had. The social part of a convention it must be admitted by all is a very important part. There a e the good fellows, and perhaps their wives, whom you have not seen for many months, may be for years. There is the enthusiast whose delight it is to talk bowling and shooting, and the warm friend who in addition to social greetings has a few words of business on the side, and the earnest friend who likes you well but is not averse to giving a little sage advice. How forcibly we were often reminded of how idly good advice is taken by the inimitable and oft repeated recitation by Mr. Logan (before he lost his voice). You would almost think you heard the immortal bard himself repeating his immortal words:

> Oh gentle dames it gars me greet,
> To think how many counsels sweet,
> How many lengthened sage advices
> The husband frae the wife despises.

But to our tale. For the northern, western and southern members, there has never been a convention where the route to and fro has been more enjoyable. The beautiful Hudson or the grand Alleghenies never tire us. And then the unequalled bay with its wonderful sights. That ride to Providence on Monday night may have been enjoyable to some who had an outside birth with electric fan attachment, but to those not so privileged the berths were at least 50° too hot. I don't know where or when the New York men received thanks for the enjoyable supper given to all visiting florists on the Plymouth, but they richly deserve them. Although it took some time to find all hands and the writer believes he was the last to sit down it was handsomely done and enjoyed by all.

I did not intend to say much about the convention itself, for a full report of that has been given and more will come. The president's address was worthy of the man and reads even better than it sounded from the platform. The trade exhibit if not equal to some former exhibits in trade requisites, certainly surpassed most

former ones in display of fine commercial plants. The president's reception was carried out as it should be, and not as the one at Cleveland was. The distinguished man in evening dress and patent leather shoes looked all a president should, and as I am likely to see Mr. McKinley this week I will compare them. The Providence men worked hard to make us happy and they succeeded. They are not a noisy lot of men, on the contrary very modest, but they sacrificed all their time and energies to make our visit one to be long remembered. Mr. Macrae, Mr. Leach, S. J. Reuter, and many others, were looking out all the while to see what they could do next to make us smile, while Mr. A. M. Rennie was a host in himself when it came to sports, and who but knows with how much business ability and with what great success the trade exhibit was managed by Mr. Wm. E. Chappell.

That visit to Newport was a revelation to many a florist, even among the ranks of the veterans. Such an aggregation of wealth and the luxuries it affords is not to be seen in the same number of square miles elsewhere on this continent, and perhaps not elsewhere in the world. Before the clams were served we had a ride round, and to help digestion we had another journey among the modest cottages. If these same cottages were found most any other place we should be apt to call them palaces. It may seem strange to many but nevertheless a fact that in this spot where the richest of our people do congregate and where there is supposed to be a corresponding centre of culture and refined taste, the taste in art, especially that pertaining to landscape and garden ornamentation should be peculiarly English. The close and prim clipped privet hedge I don't admire. As a dividing line between neighbors it may be admissible, but when arrayed along the street front, behind a stone wall it is an unsightly affair and very un-American. Now we know where many of our wealthy people imbibed the love of privet hedges, and insist on having a hedge planted in front of their beautiful homes on our unequalled Delaware avenue. God forbid that the craze will be carried so far as to spoil it. I don't think it will.

With all these gentle criticisms Newport is a magnificent place, and worth many a hundred miles' journey to see. I heard some of my friends promise their wives a cottage there; of course it would not be so very expensive for us as we should be our own gardener. To mention even but a few of the beautiful places is too great a task. While riding on the superb roads we noticed the residence of W. K. Vanderbilt, Marietta Villa, the resting place of Mrs. Paran Stevens, the Cushman Villa, the magnificent home of T. M. Davis, the Van Alen Cottage, L. L. Lorillard's Vineland, and dozens and scores of wood and stone and marble palaces, not one a repetition of the other in architecture. I might have remembered more but the intense blue of the hydrangeas fairly dazzled my vision. I do regret that in our leisure hours we did not make a closer acquaintance with more of the able young men who have charge of these lovely places. I should say from the perfect finish and neatness of the ground and the flower gardening there must be an honest and good natured rivalry existing among the gardeners of Newport, for no place came under our eye that was not perfection in its keeping.

While waiting for the New York boat we were fortunate enough to have a hearty greeting with several of the Newport boys, but it was all too short. We had been sight seeing feasting and absorbing the eloquence of Messrs. Graham, May, Craig, Fancourt and others, so little time was left for an exchange of ideas with our hosts, but we did have the good fortune to meet Robert Laurie, gardener to Cornelius Vanderbilt, Herman Lips, gardener to T. M. Davis, Esq., one of the finest places; Robert Christie, the canna enthusiast; also Alex McLellan, Andrew Meikle, John Allan, Robert Hunnick, James McLeish, and several others whose names I wish I could remember. As we walked the gang plank we wished we could have taken them along.

Before retiring to our respective staterooms there was held an impromptu meeting at which many of the old heads expressed their great regret that a fuller opportunity had not occurred at which many would have liked to express their warmest thanks to the Providence and Newport men for the great welcome and kindness which they extended to all of us. It was moved, seconded and carried with a mighty shout that the heartiest thanks are due every florist and gardener of Providence and Newport for the unstinted and hearty welcome and pleasure they had given to every visiting florist, and many are the wishes that the day is not far distant when we shall see them again in their beautiful homes. We then retired to slumber calm, and dreamt of the babies 600 miles away. W. S.

Shrubs for the Florist.

BY CHAS. JACKSON DAWSON.

[*Extracts from paper read before the Providence Convention.*]

I do not recommend the establishment of a sizeable nursery in this conuection, but only what one might call a supply nursery, from which you would be able to fill the average small order; all large orders you could have shipped to your client direct from your favorite nurserymen.

The varieties of shrubs carried would naturally have to be limited and the number of each kind would depend largely upon the locality in which you were situated. In the selection of your species and varieties there are a few points to bear in mind: first, that there are a few plants which nearly everyone will want. Deutzia gracilis, Hydrangea paniculata grandiflora and lilacs are examples of that kind. Some of your clients will, in all probability, wish you to make a small plantation around their house. In this case you should have such shrubs as always group well together. This will not really take many sorts, as the practice now in vogue of massing a number of plants of one sort will readily do away with any great variety.

Again you should take care and not select a list of shrubs which would all flower at the same season of the year, but have a few sorts for different times of the season.

It might be well to carry a few of the most popular novelties, but very few; the public is slow in recognizing them. Fight shy of them, and, in preference, carry the sorts for the hundreds instead of plants for an individual.

You will need a few vines, such as wistaria, Ampelopsis Veitchii, clematis, actinidia and climbing lonicera.

For hedge plants, Berberis Thunbergii, privets, and Spiræa Thunbergii are the most popular.

Hybrid roses and a few pillar roses will always find a ready sale.

Altogether, twenty-five to thirty sorts of shrubs and vines are all a local florist should attempt to carry to commence with. This number will make quite a nursery, and will be sufficient to meet the average demand.

One word in regard to the planting and digging of the stock you are to carry. You should know enough about the planting of the shrubs to oversee or advise as to the proper treatment of same after they are sold. There is altogether too large a percentage of shrubs that die annually simply because they are not properly planted, and then the nurseryman is usually blamed for it. No doubt he is oftentimes to blame, but more often the trouble is due directly to the customer who imagines he knows all about the planting in question, and really knows nothing. Poorly prepared soil, the roots of the plant severely cut back or doubled up and placed in practically a post hole is too often the treatment that a well grown nursery plant receives, and then it is expected not only to live, but to thrive.

If you are to make a success of a local shrub business you must see that your shrubs are properly dug, pruned and packed before they leave your establishment, and then be able to talk intelligently to your customer in reference to the habits and future treatment of the stock sold. In starting a small nursery of this sort it seems to me that the best plan would be to lay in a fair stock of salable-sized plants from some reliable nursery, then, in order to keep up a supply, obtain a stock of small plants and grow them on for two or three years, when they would be of a very salable size. In this way you could keep up a good supply from year to year as your business demanded.

For a list of shrubs which would be most desirable I would recommend the following:

Syringa vulgaris (lilac), purple and white, and if business demanded it, a few of the choicer sorts, also the Syringa chinensis (Persian lilac); Hydrangea paniculata grandiflora, Viburnum opulus sterilis (the common snowball), Deutzia gracilis, Spiræa Thunbergii, Spiræa Van Houttei, Forsythia Fortunei, Exochorda grandiflora, althæa, Lonicera tartarica, L. stella, and L. Morrowii, Philadelphus coronarius, Pyrus japonica, and Rosa rugosa. The above are all popular and well known.

Hybrid roses in variety, pillar roses, such as the Crimson Rambler, the Dawson and Rosa multiflora; Rosa setigera and Rosa Wichuraiana are two first-class single roses, which are bound to be in great demand in the near future.

Magnolia stellata, M. Soulangeana, M. speciosa, and Pyrus Parkmanii would do well for small trees.

Lonicera Halleana and L. Heckrodoti I would recommend as two first-class climbing honeysuckles.

Rhododendrons, hybrid sorts, azaleas, Ghent and Mollis, and Daphne cneorum might be added as choicer and more expensive sorts to be carried in small quantities.

For midsummer Hypericum aureum and H. kalmianum would be good.

This would make a fair list to start with; more could be added or others substituted as business demanded; but to commence with, this list would be enough, and, as a rule, be satisfactory to the customer unless he be looking for novelties.

THE DIRECTORY and reference book for 1896 contains 335 pages, an increase of 64 pages over that of 1894.

A GROUP AT PROVIDENCE.

Treatment of Bulbs and Other Matters.

A correspondent from Decorah, Iowa, sends a long communication, too long to be published in detail. Boiled down, the complaints and questions are as follows:

"We read in the AMERICAN FLORIST to pot all your bulbs at once. How do you keep them from all flowering at same time?"

The word "bulb" covers many species. I don't think any one gave that advice in these columns unless they qualified it by saying what bulb. For tulips and hyacinths and the hardy narcissus that advice is good, as winter sets in and arrests their growth, and then they can be brought into flower from Christmas till middle or end of April. Roman hyacinths and paper white narcissus can be planted at intervals but none should be out of the ground after November 1. The narcissus should never be touched with frost and it does no good to Romans. Freesias should not be covered at all. When first potted and stood in the frames a light mulching, say ½ inch, will do no harm, but that is all that is necessary.

"I find a cold-frame covered with old manure and straw, which by December 1 will be frozen solid, a very inconvenient place to get at to examine bulbs, and it don't seem possible that it is the best plan. Is there no better to be recommended?"

Many times I have given out my treatment. It is to place the flats on a dry piece of land (I am now speaking of tulips, Von Sion and the Dutch hyacinths used for cutting). Place the flats on strips of wood; they will lift clean, without earth sticking to the bottoms of the flats. For a couple of months three inches of light soil or tan bark is all the covering they need. When real winter comes, and I like to see the soil a little frozen first, we cover with five or six inches of long stable manure. Winters with us vary greatly. If we have a fair amount of snow to help our covering the frost seldom reaches the soil sufficiently to cause trouble in bringing in the bulbs. If there is hard freezing and little snow I have seen the frost penetrate down to the flats and they have to be chopped out, but even with that labor I thought the benefit to the bulbs by having them outside more than paid. Perhaps in Iowa the winters are so severe that this plan may not answer.

"A writer in the AMERICAN FLORIST two years ago said pot the Roman hyacinths as soon as received and set outside, covering with two inches of old manure and water once a week until cold weather sets in. What does he call cold weather? If potted September 1 and watered every week till December 1, will it not rot the bulbs? Narcissus, he says, need more water than Romans."

I don't remember reading this passage in the FLORIST. This watering business must be guided by brains. If thoroughly watered when first potted or put into flats and covered with two or three inches of soil or tan bark and we get a good rain once a week no more watering is necessary, but in case of three weeks' warm dry spell a good soaking will benefit the bulbs, for if allowed to get very dry they won't be making roots as they should.

"I bought two lots of lily of the valley pips and not one of them ever started to grow at all. What treatment do they want?"

A few months ago there appeared in the FLORIST from the pen of that eminent grower, Mr. R. Simpson, a series of excellent and exhaustive articles on how to handle and force valley, to which I refer Decorah, for I could add nothing half as good. The only time I have seen valley pips refuse to start is when the new crop is attempted to be forced very early, say Christmas time, and insufficient heat was given. They will then just stand still.

"Lastly, one more question: What do you do with soil taken from the benches on which roses and carnations have grown? I suppose it can be put to further use in some way."

We never have enough of it here. If so inclined we could sell any amount of it for more than it cost us to people who want a load of "nice dirt." It is just what you want for your bulb flats. If put in a heap and a fourth or fifth of good manure mixed with it, it will the following spring be plenty good enough for potting many of the common bedding plants. Even if you have a farm it is surprising how much soil you can use. Large growers who skin an acre or two of land for their benches, return the old soil, and after cropping a year with something that wants plenty of manure they seed it down again and have in a few years a soil that can be used again for their benches.

WM. SCOTT.

Cypripedium Bellatulum.

[*See engravings page 77 of last issue.*]

The cypripediums may be roughly divided into four groups from a cultivator's point of view, first the true terrestrial species, many of which are natives of the United States, then the South American kinds that are peculiar in that none have tesselated leaves, all being strap-shaped, and the pollen a dry powdery mass, then those from the east that are for the most part beautifully tesselated in the foliage, and last the group that come also from the eastern hemisphere but are very distinct from all others, one of which is here reproduced, C. bellatulum. This last section bears out to the utmost the common name "slipper-flowers" in that the pouch is as beautiful a model for a shoe as can be imagined. Cypripedium bellatulum flowers make exquisite boutonieres, and we grow them for the purpose specially.

There is no difficulty in growing this species and its near allies, C. concolor, C. niveum, and others, if they are suspended where no water can lodge in the heart of the growths, and if potted in good loam fibre with pieces of lime stone mixed through the soil. This species grows naturally on limesone rocks, and the addition of a few chips in the soil makes quite a difference in the vigor of the plants.

C. bellatulum is a variable species. There is wide diversity in the arrangement of the spots. There is also a pure white one in cultivation in the collection of Jas. E. Rothwell at Brookline, Mass., but the gem of all C. bellatulums is the one here figured as a variety, in striking contrast to the type. This one is a beautiful shade of nankeen yellow with the red spots arranged in lines, and the lip unspotted; it is a great beauty, quite unique if indeed it is not a new species, as there appears to be no other yellow variety on record. In any case Mr. Rothwell is to be congratulated on the acquisition of such a treasure. The flower has been sent to Kew for identification. The photo-

graph is taken exactly life size and is a good representation of the original.

E. O. ORPET.

The Hamburg Exposition.

After a day's trip among the retail stores in New York where business was very quiet, the writer departed on July 22, on steamer Barbarrossa for Europe. The trip across the ocean was exceptionally wet, cold and foggy, excepting through the Channel and North Sea, where the weather became and has since been pleasant and warm, in fact very warm, about 85° to 87° during the day, but of course the nights are cool and refreshing.

A day's pleasure trip in Bremen showed us the general love for flowers. Window and veranda boxes were everywhere, on steps and over doorways, over gateways and along fences, and how bright and beautiful are they, full of bloom and wonder ul green foliage. The principal plants used are lobelias, fuchsias, ivy-leaved geraniums, zonal geraniums and begonias. Fuchsias can be seen in all public and private places in the sun and in the shade. They b oom in profusion, in beds and as standards. In many places standard geraniums, roses and hellotropes grow to perfection.

The stores in Bremen as well as Hamburg make it a special study to trim their show windows in tasty and neat style. The combinations of odd colors seems to be at present the thing, and in this line very beautiful effects are made. However, about this item we shall write later after seeing the special exhibition of floral arrangements which will be held from August 27 to September 5, at the Hamburg exhibition. It is astonishing the number of stores and permanent stands that can be seen in these two cities. Of course the many steamer arrivals and departures is one cause, but the greatest demand is for birthdays, betrothals, weddings, dinners, every day use and also not to forget cemetery and funeral work.

Arrived in Hamburg on August 4 just one day after the special exhibit July 27 to August 3. Many things remained, however, to show to what extent flowers, fruits and vegetables had been exhibited. After being introduced to the genial secretary, Theo. Eckhardt, formerly of Baltimore, and being provided with the proper credentials we were ready to go out and make a hurried round of the exhibition grounds.

The exhibition as a whole is one of beauty and finish. Wherever the eye rests something of interest can be seen. The park itself is naturally well adapted for an enterprise of this magnitude and with a liberal sum on hand and the many exhibitors every space and every nook has been utilized. The open spaces show lawns of exquisite beauty, groups of conifers make pictures of ever changing greens, a bed of scarlet geraniums here and a bunch of tall standard fuchsias full of bloom, and beds of tuberous begonias and summer plants everywhere. It may be said that an over crowding in several spaces can be excused by the fact that many exhibitors could not be accommodated otherwise.

The secretary informed me that for the special fall exhibition several large tents will be erected, and then the space will be short of doing justice to all intending exhibitors. The grounds are extensive. Of course much room is occupied by the many restaurants, summer houses, Alpine houses and other places for recreation. These buildings are all built on extensive plans, all different and suitable to the different locations, and for distinctive uses, for the sale of beer, wine, milk, fruit wines, etc. Considerable sums have been spent for original decorations of these buildings, adding to the general effectiveness of the whole exhibition grounds. Besides the main building for the display of plants and flowers many side buildings are erected for special displays, floral, fruit, vegetable and botanical purposes. In the cut flower and floral arrangement department constant changes are made. Every Friday these displays are renewed, besides during the other days every florist tries his best to keep things looking fresh and tidy. It is refreshing to walk through these rooms, cool, fragrant, and some very artistic effects are produced. All walks and places inside and outside of the buildings are kept very clean and damp.

The plant displays in the main building also constantly change, one week tuberous begonias, geraniums, etc., the next week hydrangeas, gloxinias, fibrous begonias, etc., besides the display of foliage plants, such as araucarias, caladiums, begonias, adiantums, palms and many others.

On August 6 premiums were offered to amateurs for single plants of their own production. It was amusing to see boys, girls, young ladies, women and men bring in their plants from all directions. Some very nice specimens were seen, but altogether they were the ordinary run of house plants. All over the grounds many fine specimen laurel trees in tubs were placed; especially were these noticeable around the restaurant places and music stands. Four bands and orchestras play in different parts of the grounds during the afternoon and evening; the music stands are near the refreshment houses and we spent many hours eating our meals, refreshing ourselves and listening to the delightful military band and orchestra of forty to fifty instruments.

Under the guidance of Mr. Eckhardt we also saw much of Hamburg and the beautiful surroundings, but he promises a special treat for us at the special exhibition, when we hope to see many brother florists from America. We spent several delightful hours in the grounds with those two well known growers Julius Roehrs and J. M. Keller. Unfortunately they must leave for home the middle of August. Mr. and Mrs. Anthony Wiegand, of Indianapolis; Mr. Eisele, of Dreers, and several others have also been through the grounds.

The exhibition is beyond a doubt a beautiful creation, instructive to a high degree. It must be seen several days to appreciate this fact. W. B.

Boston.

FINE EXHIBITION AT HORTICULTURAL HALL.—A SUPERB DISPLAY OF AQUATIC FLOWERS —BUSINESS QUIET.—SEASHORE TRADE DROPPING OFF —PLEASANT RETURN FROM NEWPORT. — VISITORS IN TOWN.

Last Saturday's exhibition at Horticultural Hall was superb in every way. The only unfavorable comment heard was to the effect that the show should have been scheduled for two days instead of three hours. The aquatic displays from H. A. Dreer and Oakes Ames were most interesting, comprising as they did so many new and beautiful additions to the list of water lilies. Both were admirably arranged with sedges, papyrus, nelumbium foliage, etc. Besides first prize for display, Mr. Dreer, who was represented by Mr. Tricker, received a certificate of merit for Nymphæa Falconeriana, a hardy American seedling, flower very large, dark cherry color, with cardinal stamens and golden center. Ouvirandra fenestralis was shown in grand shape by D. F. Roy, gardener to E. S. Converse, and Wm. Thatcher, gardner to J. L. Gardner.

The exhibition filled both upper and lower halls. A great show of asters was made, the different classes of this favorite annual being shown in good variety and quality. Jos. H. White, John L. Gardner, H. A. Wheeler, John Jeffries and C. H. Souther were the leading exhibitors of asters. Herbaceous flowers from N. T. Kidder, J. W. Manning and Oakes Ames were also fine. A silver medal was awarded to Henry A. Dreer for collection of canna blooms, certificates of merit for gladiolus "White Lady" and canna "Alemannia" and honorable mention for petunias.

There is but little business going on and prices on cut flowers have changed little since last report. Chilly nights give notice of the approach of autumn and the closing up of the seashore trade, which although small in comparison with that of former years has been very acceptable to the dealers here, who have found the local market unusually dull this season.

The 10 p. m. train from Providence on Friday evening after the trip to Newport carried nearly one hundred of the Boston "ornamental horticulturists." Newport scenery and Rhode Island hospitality were on every tongue and everybody was supremely happy in the reflection that they had enjoyed one of the most enjoyable occasions of their lives.

Boston has had quite a number of visitors since the close of the convention. J. A. Dirwanger, of Portland; W. R. Smith, of Washington; John Walker, Geo. McLean, Mrs. Robert Craig and several others from Philadelphia; H. B. Beatty, Oil City; and Messrs. Leow and Cook from Pittsburg were among the number.

Jackson Dawson is expected to return from his trans-Atlantic trip about September 15.

Philadelphia.

HURRAH FOR PROVIDENCE AND NEWPORT. —PHILADELPHIA ON HAND WHEN PRIZES WERE GIVEN OUT.—QUALITY OF FLOWERS IMPROVING —LITTLE DOING —DEATH OF MR. PRICE AND MR. SPANGLER.

Hurrah for Providence, and three cheers and a tiger for Newport, as well! The 20th of August will ever remain a bright spot in our memories. At this writing we believe all have reported. Some went to Boston, others lingered a while in New York, but all eventually arrived home safe and sound.

Philadelphia was much in evidence at this convention especially when the prizes were given out. It kept the Quaker City boys busy receiving them; only one first escaped us, the prize for the best individual made by a bowler not taking part in the team contests. The Evans cup and the two highest individual scores in the three games in the bowling contest are ours. In the shoot we won the first prize for the six men team, had the three highest scores, and also carried off the first in the individual shoot for those not on the teams; and yet we'er slow!

The ladies of the party have much to say of the many courtesies that were shown them. They were made to feel at home from the first and thoroughly enjoyed every minute of their stay.

Omaha! Well, the wind was from the

THE SHOOTING TEAMS AT PROVIDENCE.

west that morning sure. It looks a long way now but we have a vear to think about it and perhaps it will seem nearer by next August, especlally if that half fare matures.

Things have been moving on in the old mid-August fashion the past week and there is very little doing. The quality of the flowers seems to be improving and some very fair Beauties of the new crop are to be had. La France and Kaiserin are also looking well. Some of the best of these are from budded stock. At Alexander Scott's a bed of budded Beauties has far out stripped a bench of the same rose on their own roots. Although planted at the same time and then about the same size, the budded stock is easily twice the size of the others and showing a great many buds, which by the way way have up to this time been pinched off.

The trade reception at H. A. Dreer's Riverton nurseries on August 31, promises to be a large affair. Any florist or private gardener who has not yet received an invitation will have one sent him immediately on receipt of postal by the firm. The card invites gentleman and ladv.

Mr. J. Sergeant Price, one of Philadelphia's prominent lawyers and citizens, died August 16. Mr. Price was for many years an active member of the Penna. Horticultural Society and gave freely of his time and legal advice.

Edwin J. Spangler, of Philadelphia, well known in the seed trade as a maker of seed bags and envelopes, died August 15, aged 56. He leaves a widow and two daughters.

Thos. W. Weathered's Son, of New York, has the contract to build a $4,000 conservatory, 40x50, for Geo. B. Wilson.

The wind up of the bowling tournament attracted a large crowd to the club room last Thursday evening. Each member rolled one game, making twenty-five in all. Except in a few instances the scores were not close enough to make the finish exciting, still there was much enthusiasm. The team that won the cup at Providence were challenged by six men captained by I. Kennedy, match to take place next Thursday night. The house committee provided a substantial lunch and a very enjoyable evening was spent by all. The scores follow:

FIRST CLASS.

A. L. Brown	3466
G. O. Bell	3412
John Habermehl	3295
Robt Kift	3325
I. Kennedy	3219
Geo. Craig	3162
W. J. Baker	3047
Geo. McLean	3033
Chas. Longinetti	2972

SECOND CLASS.

Albert Woltemate	2882
John Westcott	2856
Wm. Craig	2848
J. B. Starr	2765
John Walker	2746
F. Addlehurger	2740
A. Lutz	2679
C. Kohlert	2511
Geo. Watson	2442
H. Dumont	2376

THIRD CLASS.

D. Rust	2970
John McLean	2769
Geo. Moss	2643
John Gracey	2580
R. Kienhle	2550
W. Koehler	2541
F. Homan	2456
H. Kreinberg	2440
F. Ehret	2164

Instead of Thomas Butler going to the convention he bought for himself a bicycle. Early and late did he practice, sometimes he was up before the sun learning all there is to be learned anent the silent steed, and he was getting along nicely, when in an evil moment he aspired to pass an old timer, which he did, but at what a cost! He became rattled, lost control of his steed and down he came, with the result that he broke one of the small bones in his ankle. His doctor ordered him to bed, set the broken bone, and gave him the cheerful tidings that he would not be able to leave his bed for several weeks. This is too bad. Thomas has always led an active life, and to be thus confined will go very hard with him. It is to be hoped that he will not be laid up as long as the doctor predicts.

C. G Diehl, late with LaRoche & Stahl Co. limited, opened, on August 18, a retail store on 15th street below market.

K.

Chicago.

TRADE FAIRLY GOOD FOR SEASON.—COOL WEATHER.—STOCK GOOD FOR AUGUST.—SHORTAGE OF GOOD CARNATIONS.—CLUB EXCURSION.

Trade this week considering the season of the year might be called fairly good. With continued cool weather, almost too cool, the supply of roses kept fairly within the demands of the market. In quality the rose stock is very good, as a whole. Of course there is still a great deal of short stemmed stuff which sells very low. Brides and Maids, particularly those cut from old stock, are as good as ever cut in August. In prices there is little change. Select stock in small varieties brings $2 to $3. Beauties are coming in with longer stems, the best commanding $1.50 per dozen and from that down to $2 and $3 per 100 for short.

Carnations remain active and are still short of demand in the better grades. The best quality commands $1 per 100, seconds 50 to 75 cents. A few single outdoor grown violets have made their appearance but there is little demand for them. In outdoor stuff there is considerable call for hydrangeas, but few can be had in the market as yet. Gladiolus and asters are still plenty but meet with very light demand, as in fact does everything else in the line of garden flowers. Sweet peas sell fairly well but unless of extra quality or fancy variety sell at 10 cents per 100 and less. Pond lilies, of which large quantities were sold this year, are still with us, but with continuing dry weather must soon give out.

The Florist Club excursion to Bassett & Washburn's establishment at Hinsdale this Saturday afternoon promises to be a very enjoyable affair. Train leaves Union Station at 1:30 p. m.

Mr. and Mrs. Payne, of Hinsdale, have returned from Wisconsin, where they have been enjoying an outing.

Mrs. E. L. Huntington, with Bassett & Washburn, is spending her vacation at the different lakes in Wisconsin.

Recent visitors: E. C. Buechel, of the Riessen Floral Co. and R. F. Tesson, St. Louis; H. C. Laughman, Cerro Gordo, Ill.; Geo. Kranz, Muscatine, Ia.; Mrs. E. M. Harwood, Shelbyville, Ill.; F. B. Tinker, Peru, Ind.; J. A. Newby, Logansport, Ind.

Springfield, Mass.

TOO MUCH RAIN.—CARNATIONS IN THE FIELD INJURED —LIST OF 36 SWEET PEAS FOR GENERAL CULTURE.—SWEET PEA SHOW.

Florists in this locality are very much disheartened by the great amount of rains that came in July and yet continue although not quite so frequent. Carnations, especially white, are said to be rotting in the field badly. Linwood Morgan and B. J. Shaw are sufferers too, the greater part of their stocks being destroyed and nearly all outside flowers are very much damaged. Bedding plants suffer also, not flowering so freely as in seasons of less water, the only exception possibly being cannas which delight in the liberal and frequent wetting.

N. J. Herrick, who left this locality in July, has not returned. His stock will be sold September 1.

The Hampden County Horticultural Society met the 17th and approved the action of the judges at the sweet pea show and adopted a list of 36 sweet peas for general culture. The first twelve are Aurora, Blanche Burpee, Blanche Ferry, Burpee's New Countess, Firefly, Golden Gleam, Her Majesty, Lovely, Maid of Honor, Royal Rose, Stanley, Venus. Second twelve: America, Captivation, Countess of Aberdeen, Dorothy Tennant, Katherine Tracy, Lady Penzance, Gray Friar, Mikado, Prima Donna, Ramona, Waverly, Mrs. Eckford. Third twelve: Apple Blossom, Brilliant, Coquette, Captain of the Blues, Duke of Clarence, Emily Lynch, Lottie Eckford, Meteor, Mrs. Joseph Chamberlain, Mars, Ovid and Senator.

Vacation time has somewhat delayed my account of the sweet pea show of the Hampden County Horticultural Society. In many respects it was one of the best exhibitions or displays of this flower ever given. After many disappointments and postponements the exhibition was held August 11 and 12. In almost any other season it would have been too late but the earlier flowers were ruined. As it was some of the large growers were unable to show anything. Some excellent flowers were staged. Lovely, Celestial, Royal Rose, Aurora, Burpee's New Countess, Maid of Honor and Golden Gleam were excellent examples of the newer varieties.

The Eckford challenge cup went to Mr. C. M. Hartzell, of Holyoke, this being the best showing of Eckford varieties for the current year. W. J. Elred, of West Springfield, was the winner of twelve first prizes. Noticeable among his were Maid of Honor, Aurora, Golden Gleam, Firefly. He also had a complete list of varieties of 1896 and 1897. E. C. Fenn, of Ware, won several awards. Among them were Katherine Tracy and Celestial. E. A. Weeks, of Worcester, took several prizes with Golden Gate, Royal Rose and Brilliant. Mrs. H. A. Jones, of Worcester, had fine flowers of Burpee's New Countess and Blanche Burpee, also a good showing in general display. C. M. Hartzell, of Holyoke, was awarded the Burpee Prize of 21 books on horticulture for general display.

O. H. Dickinson was granted a diploma for a fine exhibition of cannas. The Botanic Gardens of Smith College, L. J. Canning gardener, showed some two hundred varieties of hardy flowers, also fancy-leaved caladiums and gloxinias. Donald McGregor, gardener for A. H. Lyman, of Northampton, made a fine exhibit of gloxinias, for which he is famous. Mr. Earle, of Philadelphia, and several seedsman, from Hartford, Worcester and other places, were comparing varieties and taking notes. The Allegheny hollyhock was shown by A. E. Wohler, Altoona, Pa. They are certainly a beautiful strain and attracted a good deal of attention. B. M.

St. Louis.

COOLER WEATHER IMPROVES STOCK.—DEMAND LIGHT.— EAST ST LOUIS PARK COMMISSIONERS.—OAKVILLE FAIR —HURRAH FOR PHILADELPHIA.—BOWLING.

Weather dry and cool and the growers report they are very much in need of rain. Business very quiet the past week. Reports from store men all over the city are that nothing but an occasional funeral order keeps them from forgetting how to make up the work. During the dull days some of the florists are renovating their stores with new wall paper and fresh paint.

The cooler weather has improved the quality of stock, but the demand is very light and all stock is plentiful. No shortage of anything except American Beauty roses. There was a demand for these last week, but they were hard to find. The best roses that come in now are Kaiserin, Meteor and Bridesmaid. Some few good Perles. The first class bring $3 and the seconds are selling at $1.50 and $2 per hundred. Carnations are still very scarce but the few that are coming in are looking better; price $1 per hundred. Tuberoses, asters, gladioluses and hydrangeas are plentiful at all the places. Clematis paniculata is blooming now and is used very much in choice funeral work.

The citizens of East St. Louis held a public meeting last week for the purpose of selecting five candidates for park commissioners. After considerable balloting the following were selected from the list to run for the position of park commissioners: T. J. Daniel, Dr. J. L. Wiggins, Henry Pfeifer, J. M. Sullivan and Dr. H. J. DeHann. The election will be held Tuesday.

The Oakville Fair opened August 21, under the auspices of the Oakville Farmers club, on the grounds of the club at Oakville, on the Telegraph road in St. Louis county, three miles south of the Jefferson Barracks. The grounds of the club are located in a delightful grove and the club members and their families were out in full force, also a number who drove out from the city and spent the day admiring the tempting display of fruits, vegetables, jellies and other good things. There was also a fine display of farming implements. Congressman Richard Bartholdt was among the visitors and was called upon for a speech. He responded in a short address in which he complimented the club on the fine exhibits displayed.

R. F. Tesson left for Chicago Saturday, for a short trip. Bob can't stay long as there is some attraction for him here from old Kentuc.

Otto Suecker, of St. Paul, has taken charge of Tom Carroll's place.

Hurrah for Philadelphia! for they were our choice to win at bowling and shooting. I wonder if W. S. placed that bet of three good cigars with our old friend George Anderson of Darby road. Let's see. Flatbush came in fourth and poor old New York fifth. I wonder how P. O'Mara feels now. And next year we go to Omaha, 488 miles from St. Louis. It's a little far for our eastern brethren but that can't keep them away. Come, and we will be with you this time.

We had our usual good time at the bowling club Monday night and rolled three games, in which Carl Beyer came out on top with 582. Beneke second, 560; and Schray third, 532. The single high score was by Beyer, 210; Schray and Beneke second, 209. As August has five Mondays the series will be extended to 15 games and not until next Monday night will the August series end. The three leaders are C. Beyer, E. Schray, and Chas. Kuehn. A great finish is expected by these three men for the medal.

J. J. B.

St. Paul.

Business is quiet through better than at a corresponding date one year ago. There is some comfort in that thought. Roses and carnations are in fair demand with the supply about equal to requirements. Other flowers are abundant and cheap, there being no regular prices on outside stock. Cool nights the past week has caused some mildew and occasional firing is necessary.

Chris Bussjaeger, who suffered a heavy loss from fire last spring, seems to be prosperous in spite of the disaster and has erected two new houses 18x80, which will be devoted to roses. Heretofore he has grown chiefly bedding plants, but with increased facilities hopes to do a nice business in the cut flower line He has also added a neat, attractive office to his establishment.

Carnations and violets have made a fine growth this season and the best plants—the strongest and freest from disease—we have ever seen will be planted for winter blooming.

Haugen & Nilsen contemplate putting in two more houses to violets this winter, nearly doubling the number grown last season.

We are delighted to learn that we are to have the convention in the west next season, and hope that our wide awake progressive growers will make a good display.

We regret to learn that Mr. Gray, foreman for Mendenhall, of Minneapolis, is about to return to the east. During his stay here he has made many friends here as well as growing many fine flowers.

Mrs. A. S. Swanson is quite ill at her home in this city.

Recent callers were Mr. Currie, of Currie Bros., Milwaukee; Mr. Lipman, New York, and Mr. Massey, of Carter Crume Co., Dayton, O. FELIX.

Cleveland.

Business has been very dull of late and without any noteworthy features whatever. Flowers have been of the customary summer quality and quantity, although some pretty fair roses are being cut now.

James Wilson, formerly of Williams & Wilson, has erected three houses about

125 feet in length this summer. They are to be devoted mostly to roses, mainly Meteor.

Those who attended the convention at Providence have nearly all returned and report most favorably in regard to it. Everybody had a good time and all speak most highly of the cordial hospitality that was extended to them. A.

Herbaceous Plant Notes.

August is a good time to sow the seed of perennials. A great many species may easily be increased in this simple manner, though for the reproduction of special varieties, propagation by division or by cuttings is the only sure way to be relied upon. A frame or a bed in a sheltered and shady position should be prepared for this purpose and the seeds sowed in rows 5 or 6 inches apart. The soil should be rich, fine and light, but not newly manured. The smaller and finer seeds must not be covered too deep; with the larger and harder ones it does not make much difference. For some of the largest, two inches is not too deep, but one inch is usually enough for all, providing the soil be kept constantly in a moist condition until the seeds have germinated and the young plants are up. Some seeds will come up a few days after sowing, others will not appear above ground for several weeks, and a few kinds may lay dormant for months or even a year before they show any inclination to germinate. Fresh seed is always the most reliable, for this reason, fall sowing is generally practiced with the spring and early summer flowering species, seeds of these ripening early enough to be sowed in August or even sooner.

Some of the young seedlings will be strong enough to bloom the following summer, though most of the species are slow growers for the first year and will not be in condition to perfect their flowers until the year after. When the young plants are of suitable size they should be transplanted without delay in a similar bed or frame, preferably the latter, because a protection of sash for the first winter helps to preserve vigor and strength of the seedlings, but in the open air, good results may be expected when we take the additional precaution of protecting the ground by covering with long manure or litter of some sort. The covering must not be put on too early. We should wait until regular winter weather and hard frost has set in, the end of November or first half of December is plenty early enough. None of our hardy plants are ever injured by frost in the last two months of the year. February and March are generally the most trying months for them, alternate freezing and thawing of the crowns causes the mischief. When these are slightly protected or shaded, they are not so liable to frequent thawing out, the ground remains in a frozen condition under the covering and this saves our plants from injury.

The seedbed may contain a number of plants which were not large enough for transplanting before frost, let them remain where they are and cover the bed with the same rough material as the other; in spring these little plants will soon be in condition for transplanting. Some of the seeds in the bed may not have germinated at all, but they generally will do so as soon as the ground gets warmer and even if they do not show above ground then have patience. If the seed was fresh and well ripened you will see the young plants coming up before fall, therefore it is well to keep the bed moist and free from weeds.

Late summer sowings necessarily require more attention and labor than spring sowings, still with many things it is safer to sow the seed soon after ripening and we should not mind the little extra labor especially as we may expect at least some of the plants to flower in the following summer, while but very few of the plants raised in spring will attain strength enough to flower the same season.

Among those which are always sure to germinate readily are the following: adenophoras, æthionæmas, of all sorts, the agrostemmas, altheas, the various alyssums, amsonias, the anchusas, antennarias, aquilegias in variety, arabis and arenarias, armerias, arnebias, arnicas, aubrietias, bellis, buphthalmums, campanulas of many sorts, centranthus, coreopsis, the many delphiniums, dianthus, dictamnus though it takes a long time to get strong plants from seed, digitalis, the dracocephalums, erigerons, erodiums, eryngiums, gaillardias, geums, gypsophilas, helianthemums, heucheras, hibiscus, lathyrus, leontopodiums, linarias, linums, lupinus, many of the lychnis, the malvas, orobus, but they take a long time to make strong serviceable plants, papavers, pentstemons, palemoniums, primulas, pyrethrums, rudbeckias, salvias, scabiosas, sidas, silenes, stachys, stenactis, thermopsis, slow growing but germinates readily, tunicas and many of the veronicas.

These alone, in variety, would constitute quite a collection, but of course double flowers and choice varieties would scarcely be represented and many of the poor or indifferent flowers would also have to be weeded out when blooming time arrives, yet where a large stock is wanted of any one species, seed sowing is the cheapest way to accomplish this. It would perhaps be doubtful whether it would pay the small grower, with limited grounds to try and get up a collection by sowing the seeds of all the species mentioned above, as the plants will perhaps occupy too much valuable space and cause too much labor without returns for a year or more and perhaps over one-half of the plants would prove inferior to the original type and would have to be thrown out. J. B. KELLER.

Rochester, N. Y.

Davallias.

There are now a large number of species included in this genus, many of which were formerly given separate generic names, and I think that the microlepias, leucostegias, acrophorus, etc. might for all practical purposes, still retain the generic names by which they are best known and generally catalogued in the trade. In these notes I intended to refer more particularly to those of the harefoot section.

These are now many very distinct varieties of these most of them being very useful for decorating. As they are so easily propagated from divisions, few growers trouble about seedlings, yet seedlings make much the best plants. Spores do not germinate so freely as many other ferns, but with care in selecting the seed fronds at the right time, and sowing them soon after they are collected, good results may be obtained. I like to surface the spore pots with a little sphagnum moss cut up and rubbed through a fine sieve with sand and charcoal; this makes a good surface for any of the choice fern spores. The pots may be well soaked with water before sowing the spores, after which no surface water should be given. If the pots are stood in saucers sufficient moisture may be kept up by filling the saucers up about once or twice a week. It will depend on the position and other circumstances, but it should be remembered that it is possible to over do it, even by filling up the saucers. Each pot should be covered with a piece of glass, and if the water condenses on the under surface it should be wiped off at least two or three times a week. I prefer the seed pots to stand in the open on the shady side of a house. Day light is very essential, but the direct rays of the sun must be avoided.

By raising seedlings we not only get much better plants, but some very pretty varieties may be obtained. D. fijiensis varies very much and some distinct varieties have been obtained. Messrs. Birkenhead's f. elegans is one good example; this has broad spreading finely cut fronds the young ones having a dark bronzy metallic shade. I saw some very good things at Mr. Bull's nursery some time ago which evidently were nearly allied to the above, and of these epiphylla is one of the most distinct. The rhizomes spread more than in the species and have a tendency to grow erect. The large spreading fronds are of good substance.

D. lucida, is somewhat intermediate between the above and D. solida; the large fronds have a bright surface. D. concinna differs from fijiensis in having short rhizomes densely covered with rather long scales of a reddish brown color.

D. fijiensis robusta, raised at H. B. May's nursery, is a vigorous growing variety with rather thick rhizomes which spread freely. It is one of the best for baskets, the long rhizomes soon covering the surface and the large spreading light green fronds are very effective. Effusum is another from the same batch of seedlings. This has long rhizomes and finely cut drooping fronds, the dark bronzy tint in the young fronds being very decided. The Japanese D. Maresi also varies very much. There is a very pretty crested variety sent out by Messrs. Veitch & Sons a few years ago. Although a distinct and pretty variety it does not appear to be much known. Decurrens is another distinct variety; it has long slender rhizomes, which are covered with light brown silk-like scales; the small triangular fronds are of a pale green; when grown in suspended pots the rhizomes will extend a good distance below the pots.

D. glabella, a seedling variety from Tyermani, has slender rhizomes, covered with silvery white scales, and small finely cut fronds of a deep glossy green. Pulchella is another very pretty variety of the same parentage; the young fronds have a deep bronzy tint. The three last named originated with Mr. H. B. May.

All of this type of davallias are worthy of attention. I may mention Griffithiana, elegans, and decora, as being among the best. They all succeed well in an intermediate temperature. They should be potted in a rough fibrous compost, and plenty of drainage used. As they do not root deep, pans are preferable to pots, especially for larger specimens. Under good treatment, they never have an untidy appearance, and are very serviceable for decorations or for cut fronds. During the autumn some of the fronds ripen off a bronzy yellow and these are much appreciated by some of our London florists for bouquet work.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

MR. W. ATLEE BURPEE is daily expected home from Europe.

FOREIGN REPORTS indicate a good radish seed crop; spinach will be rather short.

MESSRS. PETER HENDERSON & Co. are making some repairs on their Cortlandt street store.

HARRY WATERER will open a bulb and seed store in Philadelphia. Mr. J. Wallace, formerly with Jno. Gardiner & Co., will have charge.

ALL GENERAL orders of French bulbs are coming in late this season and latest reports indicate stock nearly or quite exhausted on the other side.

THE F. E. MCALLISTER COMPANY.—The sheriff received several attachments yesterday against the F. E. McAllister Company, dealer in seeds at 69 Cortlandt street, from Charles J. McDermott, in favor of the following creditors: Thomas Matthews, $2,792; Marshall H. Duryea, $760; Arthur C. Scutts, $130; Patrick Brady, $1,200, and the Fulton Market National Bank, $849. The company made an assignment on June 11.—*New York Times, August 12.*

Growing Lilium Harrisii Bulbs.

I have read the discussion on above subject and will add a few words. I have planted bulbs, both large and small, several times in this state (Alabama), but found they required a steady supply of water which is not always forthcoming here. From what I know about the climate and soil around New Orleans I think they could be made a success there. I have often wondered why some one did not try it. I hope the high duty will encourage growers to produce the bulbs in this country. F. J. ULBRICHT.
Anniston, Ala.

Bacteriosis of Carnations.

In a paper recently presented before the American Science Association Mr. A. W. Woods, of the Department of Agriculture, Washington, D. C., brings forward some observations in support of the view that the bacteriosis of carnations, as it has been called, is primarily set up by the puncture of plant lice and thrips, and that the bacteria that Professors Arthur and Bolley claim as the cause are really secondary agents. It is thought that when these insects have not been seen on the diseased plants, they are really present but unobserved. This statement will call renewed attention to a disease that has greatly interested the carnation grower, as well as the scientist. A.

ELLWOOD CITY, PA.—Mr. C. C. Heberling is about to start into business at this place.

YORK, PA.—Mr. Augustus Doll has bought out the establishment of B. F. Moore.

MARTINSVILLE, IND.—Mr. M. C. Beers has bought the greenhouses formerly conducted by H. R. Winn.

MAYVILLE, WIS.—Mr. A. Brunke has recently gone into the business here. He is growing general greenhouse stock.

KNOXVILLE, TENN.—The seventh annual meeting of the East Tennessee Horticultural Society was held here August 19. An excellent exhibition was made in connection with the meeting.

RED BANK, N. J.—The exhibition of the Monmouth County Horticultural Society will be held here September 1 and 2. A liberal premium list has been issued. George Steele is secretary.

THE third annual excursion of florists and gardeners to the Dreer nurseries at Riverton, N. J., takes place August 31, on invitation of Mr. Dreer.

THE LAST REPORT of the Ontario Fruit Growers' Association and the Ontario Fruit Experiment Stations has been received. It will undoubtedly prove very valuable to Canadian fruit growers. L. Woolverton, Grimsby, Ont., is secretary of the association.

VISITING SCIENTISTS — CANADAS GREAT FAIR.—A COMMITTEE VIEWS MR. UTLEY'S SWEET PEAS.

The British Association for the advancement of science (as well as many members of the American Association) has been holding its annual meeting in this city from the 18th to the 25th, and its members have been pouring forth such floods of the profoundest learning that it will take us at least ten years to digest it. The number of them is not so very great but what they lack in quantity they make up most amply in quality. The botanical papers read were "away up in G" but all the same most interesting and of a kind it is not often our privilege to hear. After the meeting the members will scatter all over the continent to get some idea of its wonders and the vastness of its resources.

An essay read the other day was entitled "A theorem concerning the coefficients of linear substitution groups of finite order with N variables" and was listened to with rapt interest. Subjects of this kind have now become quite common-place and almost vulgar to the ordinary Torontonian.

The exhibition—"Canada's great fair"—opens on Monday next and owing to the favorable conditions of agriculture promises to be a greater success than ever. The horticultural show is likely to be better than it was last year.

A committee consisting of Messrs. Geo. Vair, T. Manton, G. Mills, C. Ross and A. Ewing, wended their way to the sweet pea "farm" of Mr. E. Utley on the outskirts of the city on Monday last, more particularly to examine some varieties not yet in commerce of which Mr. Utley had received a few seeds from the Sunset Seed Co., of California, but also to take in the beauties of anything that might be found on Mr. Utley's pretty place. And I may say here parenthetically that the committee was treated with the utmost cordiality by Mr. and Mrs. Utley and their daughters (all of whom are sweet pea experts), and being in a receptive state of mind and body took in other good things besides sweet peas. The committee was inclined to judge the seedlings more from a commercial standpoint than from a "sweet pea fanciers" point of view and two or three varieties which were quite distinct and of good form were put down as "dirty colors." No. 106, a pale flesh, a little darker than Eliza Eckford, was considered an improvement and worthy of cultivation. No. 110 contained two varieties, one a purple violet self, unlike any other and very pretty, the other a delicate blush pink, very taking and one that would sell well. This pea struck the committee as being the best of the lot. No. 205, a striped lilac on white, very pretty and a slight advance on other sorts. No. 206, very similar to Senator, a fine robust grower. The committee also complimented Mr. Utley on a bed of very fine petunias. E.

TOLEDO, O.—Im Oberstag Bros. have succeeded John Wilson, having purchased the Wilson greenhouses and business. Mr. Wilson has retired from the florist business and is at present living in New York.

FREMONT, NEB.—Green & Nicol have rebuilt their carnation house 15x116 giving it a modern roof in place of the old low one. They have also built a violet pit 9x90. Their violets were very fine last year and they trust the increased space will enable them to meet the demand for fine violets.

PROOF POSITIVE

That for years our Evaporating Pans are what every **wide awake florist** has been looking for.

Listen to what a progressive florist has to say:

GERMANTOWN, PHILA., Aug 23, 1897.

MR. EDWIN LONSDALE, Chestnut Hill, Phila, Pa.

Dear Sir:—I used 18 of your Evaporating Pans last season in three rose houses 100x20. From October 1st, '96 to May 1st, '97 the plants were kept free from greenfly without the aid of smoking. I consider the pans great labor savers.

Yours truly, JOHN WELSH YOUNG.

Read our advertisement in convention and next following numbers of AMERICAN FLORIST for some other particulars respecting this process.

Twenty years ago we felt sure that some other plan than "smoking" would be evolved for killing greenfly in greenhouses, and not until the last year or so has it become an assured and a positive fact.

PANS $1.25 Each. Six are recommended for a 100 foot house. TRY AT LEAST ONE HOUSE, and NOW is the time to make the necessary preparations.

For additional particulars write to

PICNIC OF KENTUCKY SOCIETY OF FLORISTS —VARIOUS PERSONAL ITEMS.—MARKET CONDITIONS.

The Kentucky Society of Florists gave their annual picnic on Thursday, August 19, which was attended by a large number of florists. They reported a very enjoyable time.

Mr. J. E. Marrett, accompanied by his wife, has been to Yellowstone Park, and at present is in Michigan.

Victor Mathis has equipped his place with the latest improvements, among other things adding a new boiler to his plant.

Mr. H. Fuchs has added a new house to his plant.

Mr. Jacob Schulz has about completed his residence, which was very much damaged by fire a few weeks ago. Mr. Schulz was in New York at the time of the fire.

Mr. J. Coenen's young stock is looking very fine, and he expects to make quite a display at the fall chrysanthemum show.

Mr. E. G. Reimers has just returned from his summer trip. He was accompanied by his wife and two sons.

Mr. J. Thompson has been elected superintendent of Jacobs Park.

Mr. Fred. Haupt, wife and daughter have returned from Michigan after an absence of three weeks.

The flower trade is very quiet at present, but florists are looking for a good fall trade. FRED. HAUPT.

Columbus, O.

ASTERS DISEASED.—REBUILDING —PERSONAL ITEMS.

There is complaint among the florists about their asters, which indeed look poorer than they were ever known to look. A sort of fungous disease seems to have played havoc with all the varieties, the result being that asters are scarce.

The Franklin Park Floral Co. contemplate adding three more houses to their plant. Mr. Knapp, their genial manager, reports a steady improvement and entertains the most sanguine hopes as to the coming season.

Mr. Livingston is busy getting out his fall catalogue. A few new features will be introduced, which promise to make it very attractive.

Mr. Danzer, with Livingston's Sons, is enjoying a week's outing in Detroit.

Mr. S. F. Stephens has overhauled his greenhouses, having things in fine shape. HOMO.

IN THE advertisement of C. M. Grossman, page 47 of our convention number, through a typographical error that gentleman is made to offer extra heavy transplanted White Plume celery plants at $2 per 100 and $18 per 1,000, when it should have read: $2 per 1,000 and $18 per 10,000.

WINTZER'S
New Pedigree Cannas.

PHILADELPHIA—The finest crimson.
MAIDENS BLUSH—Color of Daybreak carnation.
ALSACE—Nearest pure white. And many other choice new kinds of our own introduction.

Cincinnati.

A few days ago a little party of florists and the writer of this visited our city parks, the first on the program being Eden Park. Here we found the city greenhouses, of modern construction, with Mr. Scheibele in charge. We expected to see some well grown plants as well as bedding, but alas to our disappointment, with the exception of a collection of new and rare fancy-leaved caladiums there was nothing to be seen worthy of note.

From here we wended our way down to the Eden Park reservoir and pumping station and found Ernest Breyer in charge of the city water works greenhouses, and may it be said, here we were repaid for our trip. One immense large bed of scarlet geraniums planted in the shape of a clover leaf could be seen from far away. The large vases along the reservoir with their drooping vines made a striking effect. Carpet bedding is still one of the main features here, and they all made a good showing. One which caught my eye in particular was a Maltese cross about 20 feet in diameter; some 7 000 plants were used for this bed alone; 35,000 Alternanthera paronychioides major were used in these beds. The rockery along the hillside, the semi-tropical beds in front of the office with rare and beautiful foliage and the large vases around the fountain gave evidence of art and skill. Everything seen here was in excellent condition and Mr. Brever deserves credit for his work.

Lincoln, Washington and Garfield Parks are mostly all planted with large canna beds, which have been the admiration of the flower loving public. These parks are all planted from the city greenhouses.

C. A. Peters, of Huntington, W. Va., formerly of this city, has been visiting his old friends here.

R. Witterstaetter has his new houses about completed and his boiler set. We expect to see some choice carnations from these houses. H. SCHWARZ.

Milwaukee, Wis.

Mr. Fred. Holton, late proprietor of the Paris Floral Co., and Mr. Herman Hunkel, who has been with Currie Bros. for some time, have formed a partnership and will conduct a wholesale cut flower establishment. The stock and good will of the Wisconsin Flower Exchange will be merged in the new concern. The stock and office will remain at the old stand of the Wisconsin Flower Exchange until larger quarters can be secured. The new firm starts in with large consignors from near Milwaukee and Chicago and promises to be a strong concern.

C. B. W.

Don't.

Above is our advice to "Marks" who asks as to the wisdom of painting the hot water pipes in his greenhouses.

GREENHOUSE WOODWORK.

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time tor the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

MR. WM. WARNER HARPER, who has for years been manager of the Andorra Nurseries at Chestnut Hill, Philadelphia, is now proprietor.

DECATUR, ILL.—Mrs. Katherine Daut has built two commercial houses, one 20x102 and one 11x102. She will also build a rose house 16x60.

DEERING CENTER, MAINE.—Calvin S. Goddard, senior member of the firm of C. S. Goddard & Son, died suddenly on the morning of August 4, aged 72 years. He had been engaged in the florist business here for about 25 years.

COLORADO SPRINGS, COLO.—The great floral carnival, August 17, 18 and 19 was the fourth annual affair of the sort and was far ahead of any of its predecessors. The interest in the event grows greater each year. The bicycle section was this year unusually elaborate, among the features being a floral arch carried by three wheels, with four other wheels as outriders.

MANSFIELD, O.—Geo. W. Hunt has just finished a new house 16x70.

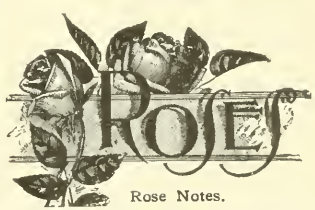
KANKAKEE, ILL.—Faber Bros. have built this summer a rose house 17x77, a carnation house 17x65, and one 17x65 for smilax and ferns. All are glazed with 16x20 glass and have all modern improvements. Heating by hot water and steam.

COE RIDGE, O.—S. A. E. Lyman, proprietor of the Essex Farm and Greenhouses has this summer erected three houses each 20x100, heated by steam. Two houses are planted to roses and one with chrysanthemums, all looking well.

Carnation Notes.

I see notices in the trade papers of a paper recently presented before the American Science Association, intimating that the stings of the aphis and thrip are the primary cause of basteriosis. It would be very desirable to have such valuable information given in full in the trade papers for the benefit of the carnation growers. Florists are not satisfied any more with given points; they would like to know on what a theory is based. From the bits of information gleaned here and there we are to believe that we do not see or observe aphis and thrips.

As to the flea-like thrip it takes rather close observation to notice them, when not made aware of their presence by their depredations, and I must confess I never have seen any yet on carnations, but will admit that they may have escaped my notice, and in the future I will try to have an eye on them before they hop out of sight. But who will not notice the tenacious aphis or greenfly? When one is not seen one day it surely will be noticed the next when it has multiplied to a dozen and, they will not hop away and hide either. And this well known and easily observed insect is mentioned as the most prominent of the two to be the primary cause of bacteriosis.



In my experience and observation as a carnation grower I have noticed that wherever aphis made its appearance bacteriosis did follow, and undoubtedly it will be the same where thrip is present. In this I am of the same opinion as Mr. A. W. Woods, but as to this being the only cause my experience as a carnation grower tells me different. I have noticed a hundred times where bacteriosis appeared without any primary cause other than careless or improper treatment. Where through carelessness the aphis gains a foothold, the doors are wide open for bacteriosis and any other disease. Thrips, and especially aphis, we can see at a glance, but bacteria being so minute we can only tell by the yellow spots in the leaves. If these yellow spots are caused by anything else than bacteria it will be very interesting to the carnation grower to know it, but that aphis and thrips are the only cause I can hardly believe. FRED. DORNER.

Not the Rust.

After having my carnations in the house for a few days I find Daybreak affected with a disease shown by the accompanying foliage. Is this rust? Can you give a remedy? C. H.

No, there is no rust. All the disease I can notice are a few bacteria spots. The plants will outgrow these in a short time. The disfiguring of the leaves and the small holes in them were caused by an insect making a meal on the young shoots. It is most likely a small yellow beetle which I have often noticed in the field feeding on the flowers and young leaves before they are fully unfolded. There is no cause for alarm at all. Many things may take place in the field we do not take much notice of, especially the plants being attacked by insects, aphis and thrip included. When the young and undeveloped leaves are injured by fungus, bacteria or insect bites, it stops the growth of the injured part, while the rest of the leaf grows on. This growing around the injured part often gives the leaf a cramped and twisted appearance, but that will all be outgrown in the house under good care.

FRED. DORNER.

Rose Notes.

We have already had in this section two quite chilly mornings with the thermometer down to 55°, and we are reminded that the date when firing must commence is not a great way off. A large number of growers will be making, or contemplating making, changes in their system of piping and heating. I would remind such of the importance of having the work finished up rapidly so as to be ready for any kind of weather that we may happen to have. I have noticed that the average florist generally counts on a good deal more time before cold weather than he has a right to calculate upon, while on the other hand the work he has laid out to do almost invariably consumes more time than he at first supposed, and it happens not infrequently that he has many anxious nights and rushing days before he has the satisfaction of seeing the changes all completed. To retire to rest at night in doubt as to whether a house or a number of houses of roses will be spoiled before morning is not a very pleasing experience, yet many of us can recall the time when we were in just that kind of predicament.

We may perhaps be lucky enough, or

clever enough as the case may be, to bring our plants through a number of very cool nights without any serious harm resulting, but we are nevertheless taking considerable risk, and in these times of over-production, low prices, and small profits we cannot afford to take any risk that is not positively unavoidable. In my opinion the only safe course to pursue from now until steady firing commences is to provide for a free circulation of air in the houses all through the night, and whenever the outdoor temperature falls below 60° start the fires sufficient to warm the pipes. To those having only a limited experience it may appear foolish and a waste of time and material to furnish artificial heat and then allow it to escape through the open ventilators. The object of firing at this early date is not simply to maintain a given temperature, which though desirable is not of prime importance; it is intended in the first place to keep the air in motion and prevent that stagnation which coupled with a low temperature is responsible for condensation and its attendant evils. We have all seen on cool mornings in the fall, when the other conditions were favorable, drops of water on the edges of the foliage; glistening in the sunshine they are very beautiful and not at all calculated to alarm us; they are, however, a sure index that something in the atmosphere antagonistic to the rose has been at work, and unless the warning is heeded, and the conditions are changed, trouble is bound to follow. Many a beginner whose breast has swelled with pride over the fine appearance of his plants has suddenly become crest-fallen and sad as he has seen the foliage drop prematurely leaving little except bare sticks. Had he known enough to leave his ventilators open and start a slow fire his plants would have been safe.

To guard against black spot on Beauties, and insure properly formed and well colored blooms on the Meteor, it may be necessary to fire for them before we are obliged to do so for such varieties as Bride and Bridesmaid. I have found that when Meteor once starts to produce black buds it is very liable to continue to do so for some time.

Where steam is used for heating it is much easier to keep down mildew than is the case with hot water; one small steam pipe coated with sulphur will do more good in this direction than would a dozen 4-inch hot water pipes. I believe it would pay on a medium sized or large place to put in a steam plant for this purpose alone, that is, to use in the late spring and early fall when one or two pipes would be sufficient; one medium sized steam boiler would carry a number of houses and would consume less fuel I think than would be needed to keep slow fires in several hot water boilers.

If our plants are growing vigorously they will now be covered with buds, and we may feel inclined to try and convert some of them into cash instead of consigning them to the dump. Don't let us be in too big a hurry; it is a mistake to attempt to cut flowers from very small plants; such bloom must naturally be small and short stemmed, and is practically of no value; the few dollars that we realize from it will barely cover the expense of cutting, storing, packing, and marketing, and cannot possibly offset the damage to the plants through loss of wood and foliage; it were far better I think to leave the wood where it belongs and build up large and strong plants that will be able to produce flowers abundantly when they are ultimately in demand and have some real value.

ROB'T SIMPSON.

Miscellaneous Seasonable Hints.

I have noticed for many years and sometimes to my cost that when there is nothing very pressing you are apt to delay work because there is "plenty of time." Postpone nothing that can be done at once for you will get busier now every day. A month from now you will have three times the work staring you in the face and realize that it must be done. My notes are reminders, and if repeated must be excused.

BULBS.

Don't delay in getting your Bermuda lilies potted as fast as they arrive. They don't improve by being left out of the ground. Roman hyacinths and paper white narcissus are here. If very early hyacinths are wanted put some in flats at once. For the earliest there is no better place than out of doors, for they will be brought into the greenhouse before any frost will hurt them. In a flat 1 ft. x 2 ft. and 3 inches deep you can put 60 bulbs. Water thoroughly, place the flats out of doors on a dry spot and cover with 3 inches of soil or tan bark. If it rains occasionally, say once a week a good heavy shower, no more watering is needed, but if two or three weeks of dry weather should come the beds should be well soaked once a week. The same treatment will do precisely for paper white. For the main lot of these bulbs, or those you want to flower from the holidays on, keep them in boxes in the coolest seed you have and if the material in which they are packed is perfectly dry they will meet no harm for five or six weeks. The paper white narcissus is chiefly useful to us at Christmas, and if planted in flats by middle of September and given six or seven weeks outside and the same time in a moderately cool house, they are an acceptable flower and find a place when flowers are scarce, but when forced in strong heat are very flimsy.

CHRYSANTHEMUMS.

Your chrysanthemums will daily want more of your care and attention, and do not neglect proper tying. Keep laterals pinched off regularly once a week. Now is the time they are making their most rapid growth and as the beds are filled up with roots water can be given freely. It is yet a little early to mulch or give liquid manure. When the flowering bud is distinctly seen and selected will be time enough for that. Next to a good soil the greatest requisite for producing a good chrysanthemum is perfect light and all the fresh air possible. In traveling round I still find lots of men growing their pot 'mums in pots the whole summer. This is a great mistake unless it be for specimen plants. Those that planted them on a bench in five or six inches of soil in June will now have nice bushy plants if they have been stopped occasionally. Don't be a day later than September the first in lifting these plants from the bench and potting. If kept a little close and shaded for a few days they will not lose a leaf. When once making roots in the pots they want air and sunshine in abundance.

VIOLETS.

If you still grow violets in the field, lifting and planting in the houses in the fall, as doubtless hundreds do yet, I would advise that they be housed early in September. The heavy dews we get from middle of Semtember and later is doubt very conducive to the spot and I have seen violets that were entirely free of it all summer become badly attacked towards end of September. Some might say the violet will stand any amount of syringing. That is true, but when you syringe the foliage the moisture soon dries up while the dew remains on the leaf from sunset till hours after sunrise and we all know that moisture is just where the spores of our low plant organisms flourish. Another will say "The plants left in the field or cold frame come out all right, showing no disease the following spring." The plants left it the field have been under their natural conditions and have thrown off the attacks of their enemy, while those lifted and weakened are in no condition to throw off disease.

CYCLAMENS.

Cyclamens that have been plunged out of doors and only shaded from the hottest sun are doing finely. Shift the strongest into 5 or 6 inch pots, but still keep them out of doors, plunged in some material, and where they will have no chance of water troubling them at their roots. The next two months is just when they will make a fine growth. Remember a rather coarse mixture of good loam with a fifth of rotted manure and plenty of drainage is what this beautiful winter flowering plant enjoys.

GERANIUMS.

Now don't forget that if you put in a lot of geranium cuttings the first week of September you will, unless we have an early hard frost, get another good crop by early October, and few of us have too many of these useful plants when spring comes.

WM. SCOTT.

Herbaceous Plant Notes.

The great majority of our hardy plants are readily propagated by simply dividing the old clumps into one or more crowns and in all cases where plants grow and increase freely, we need not resort to any other way, but there are also a number of plants which are either very slow in producing new side crowns with roots attached to them or these crowns show no inclination whatever to form any roots at all, and division would be a very slow method of increasing the stock of such things if we had to rely on this alone to propagate certain varieties which could not be reproduced by seed.

In August and early September, or also in the spring months, cuttings of most all hardy plants will root freely, if inserted in a shaded frame and covered with glass. The frame need not be dug out very deep; about 8 or 10 inches of fresh horse manure in the bottom and about 3 inches of sand or light sandy soil is enough. Cuttings of arabis, aubrietias, lotus, Lychnis vespertina fl. pl., pinks, delphiniums, pyrethrums, phloxes, lathyrus, etc., may be inserted here and can safely be left in this frame over winter to be transplanted into their permanent places the following spring.

The fall cuttings of such woody plants as helianthemums, iberis and the pretty æthionæmas of all species, root readily under this treatment. The half ripe wood should be selected and the sand or soil must be pressed down firmly against every row inserted. The gentle bottom heat created by the fermenting manure will cause the cuttings to root nicely inside of three or four weeks, but a light syringing every day is necessary in hot weather to keep up a moist atmosphere in the frame until they have formed roots; after that we may gradually harden off the young plants by giving a little air, at

MEMBERS OF THE SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS ON THE ROOKS AT NEWPORT.

night first and later on also in day time until they are hard enough to be left without sash altogether. A slight winter protection of rough, long litter or straw will preserve the tender young roots of the plants and usually all of them come out uninjured in spring.

I prefer the fall propagation, not because it is any better or more successful than when done in spring, but merely we have more time to spare in autumn and can give the cuttings the proper care and attention, while in the rush of spring work we would be apt to neglect them occasionally.

In some sections of the country and occasionally with us, gaillardias do not winter well the second year. We can keep up a stock of them without any difficulty by annual seed sowings. This answers well enough for ordinary varieties, but when we want to save or increase the stock of the newer large flowering varieties, such as Vivian Grey, Jas. Kelway or Buffalo Bill, some of which produce flowers from four to five inches across, we must resort to cuttings. These root readily, are as easily wintered as young seedlings and make early blooming plants for the following season. Should it happen that an especially good variety gets winter-killed in the border or bed and no provision was made for its perpetuation, there is still hope that we may save the variety, for the roots of the old plant are sound yet in the ground, although the crown center may be entirely decayed and gone. If we dig up the little pieces of roots which remained sound we may expect quite a number of good young plants from them without much trouble. The pieces should be planted in a bed so that the top ends are just even with the surface of the ground and in a few weeks eyes will have formed, which when once started, soon grow into strong crowns, capable of producing a good crop of flowers during the following fall.

Some plants, like the Japanese anemones, are propagated almost entirely in this manner, but it is not generally known that gaillardias also may be increased in the same way. Thermopsis montana, phloxes, statices, calystegias, campanulas, Meum athamanticum, chelones, dodecatheons, polygonums, convolvulus, geraniums, Plumbago larpentæ, saponarias, several of the œnotheras, silphium and a great many other species may be propagated by merely cutting the roots into lengths of from one to two inches and planting them in soil. On the roots, or rather the underground stems of the anemones, polygonums, saponarias or the plumbago we can clearly see the eyes from which we expect the new growth to come and they start out vigorously soon after planting, while we have to wait for several weeks with the others before the undeveloped eyes begin to swell out, but they will come surely if they are not planted too deep.

For all root cuttings, early spring planting is advisable, excepting in cases where a certain scarce plant is to be propagated for spring sales, when the whole operation may go on under glass and the young plants be potted off singly into suitable sized pots when they are large enough. Ordinarily the plants raised from root cuttings in the spring of the year are stronger and healthier than fall or winter grown stock, though there are exceptions.

With some of the species we need not go to the trouble of preparing a special bed; we can plant the root cuttings of anemones, calystegias, chelones, polygonums, convolvulus, plumbago, saponarias and kindred quick growing species, right where we want the plants to grow into their permanent places, though when grown for a season in a bed by themselves, we can select the strongest for planting and make sure of a good display of flowers for the coming season.

Rochester, N. Y. J. B. KELLER.

The Hamburg Exposition.

The premium list for the fall exhibition contains many important and valuable prizes. They will no doubt bring out an immense display. The writer has been tendered a position on the committee of awards and in this capacity will have an opportunity to get an insight into many things of special interest. In addition to medals and cash prizes for displays of designated plants premiums are offered for special extra displays and novelties not provided for in the schedule.

Among the most prominent prizes are a beautiful vase valued at $1,000, offered by Emperor William, for the best display during the exhibition; $150 for the best display from the Kingdom of Bavaria; $250 for the best continuous display either inside or outside during the exhibition; $300 for best decorative work on buildings in the exhibition grounds; $125 for the best display of remontant carnations; $250 for the best display of palms; $250 for the best display of blooming and other plants; $500 for the best display of orchids; $250 for the best display of new and decorative palms, usefullness of foliage to be considered; $50 for best display of cyclamens; and many other equal and smaller premiums for groups, displays and single plants. In floral work the following are prominent: 6 best arrangements floral work, 1st $25 and great gold medal; 2nd $25 and small gold medal; 3rd $37.50 and great silver medal; for best bridal outfit, 1st $8 and great silver medal; for best bouquet of orchids, same; for best arrangements of orchids medals and cash, and many others for wreaths designs, bouquets and arrangements in flowers. The premiums in cash and medals in the floral department, plants and flowers, fruit in pots and vegetables, number 439 for this special exhibition, besides the committee have the privilege of making suitable awards to other worthy displays.

Of special interest in the cut bloom department are generally the cactus dahlias. For these many premiums and medals are offered. Those I have seen are beautifully perfect flowers and rich in color; they can be seen used to best advantage in all florist's show windows.

On the 20th of August a small special exhibition will be held for display of floral work by employees of florists. A great display is promised as many store keepers have promised their men and women everything free for their use. It will be impossible for the writer to be there but be will gather a few points later on that subject.

On entering the main gate way of the exhibition several beds of giant cacti and agaves strike the eye. Two century plants are in full bloom and attract much attention. In another place a group of standard myrtles are very attractive. Several places are completely given up to bush and standard roses, which of course are not in their prime, but some are still blooming in profusion. Among the most prominent and prolific are the following well known varieties: Van Houtte, Mlle. Eugene Verdier, La France, Mme. Testout (the best of all), Horace Vernet, Mme. Lambert, Gen. Jacqueminot (full of bloom but loose flowers), Mme. Bernard. La France can be seen in every collection; very prolific and a general favorite; so is also to some extent Kaiserin Victoria. A bed of sweet peas grown from California seed were perfect and greatly admired.

A very attractive display near the main building were several beds and rustic stands, somewhat lowered below the surface in neatly kept grass plots, and these studded with electric lights of all colors. This I think is a competing display for the main prize, the Emperor's vase. This vase by the way is guarded day and night by a special guard in the main building. Another fine effect is produced by the veranda boxes on top of the main gateway. They can be seen from afar off and are brilliant with color; zonal and ivy geranium and lobelia principally.

W. B.

Tobacco Smoke.

A young florist from Allegheny City asks me the following questions, and requests me to answer through the FLORIST:

1st. "When fumigating a house with tobacco stems, do you derive any good from damping the walks of the house which are made of cement? Will the dampness of the house cause the smoke to come down on the walks when the atmosphere is dry outside?"

I have never seen or heard of the paths being wet while fumigating except when the paths are constructed of plank, and then as a preventive of fire. The smoke will always rise straight to the roof, and when the upper part of the house is charged with smoke it will descend to the lower part among the plants. I think the wetting of the paths as helping to bring the smoke down perfectly useless.

2d. "Will charging the house with moisture (which will close the laps in the glass) have a tendency to keep the fumes in the house?"

Undoubtedly anything that will make the house air-tight or approaching it will help to hold the smoke longer than a house full of holes, but will "charging the house with moisture" close the laps? I doubt it. It may to a very slight extent. On a cold freezing night this used to be done in old houses to keep out the cold, but when not freezing hard would do little good. You must fill your house with smoke to be effectual. The smoke is lighter than the atmosphere and will seek the top first. It was always a rule among old gardeners, and is still a good one, that a windy night is the most unfavorable for smoking and a rainy night the most favorable. Although not asked the question, I can give this advice: When you begin to fumigate in the fall do it lightly. After repeated smokings the plants most susceptible of injury will become accustomed to it. Plants are not hurt I believe by the nicotine in the smoke, but simply by the *heat* of the smoke. Dampen your stems before fumigating and produce all the smoke you can with the least fire.

WM. SCOTT.

P. S. I am honored with the confidence of many readers of the FLORIST, who trust in my judgment to answer many questions on various horticultural subjects, and usually receive the bountiful recompense of a 2 cent stamp. I am truly thankful for the stamp if I could use it, but in most cases it is so glued to their communications that to dislodge it would take ten minutes of my time and costly chemical solutions, so please let the head of him "who could not lie" flutter around loose and I will take my chances of finding it.

W. S.

Miltonia Vexillaria Superba.

Miltonias are among the most easily cultivated of orchids, so far as their requirements go. Some grow them in cool houses, others in warm and others again in an intermediate temperature, and it is hard to tell the difference in the results. The species under note comes from the cattleya region and thrives well under the same treatment except that they need more shade. This species used to be known as an odontoglossum. They make superb specimens. One was recently shown in Boston that had nearly 250 expanded flowers, and the lovely arching racemes of pink flowers were a sight to be seen and remembered. The variety here illustrated is a rare one. The plant from which the photograph was taken is part of the one illustrated in Williams' Orchid Album, and is distinguished by the rich crimson blotch in the center of the flower.

Few orchids would pay the enterprising florist to grow as well as this Miltonia vexillaria. The long sprays come in in time for the June season and are specially adapted for wedding decorations whether used in pots or cut, and the flowers last a long time if kept from dampness. They are easily cultivated and increased by dividing the plants. Unless ours make two growths each year where one was last we think there is something wrong with the treatment.

E. O. ORPET.

New York.

BUSINESS STILL QUIET.—PREPARATIONS FOR GOOD FALL TRADE.—IMPROVEMENTS—QUALITY OF ROSES IMPROVING.—FRANK M'MAHON'S NEW HOUSES.—A TRUSTED CLERK SKIPS.

Not much business is yet in sight in the cut flower marts, in fact the dullness is unusually apparent even for this season of the year. But everyone seems confident of the future and preparations for the busy season are being made on all sides. On 28th street an atmosphere of activity has taken the place of the summer listlessness, speculation regarding the prospects for the fall and winter campaign and gossip as to who shall handle the stock of various desirable growers are in the air, old accustomed faces are seen about their usual haunts and everything begins to assume a normal appearance which is pleasant to contemplate after a long idle summer. The price of lemonade at the corner is said to have been doubled since Tierney, the syndicate truck man, ran up against five aces one morning recently, and Jimmy Carroll has returned from his two month's vacation with an actual gain of twelve pounds, an unprecedented accomplishment for Thorley's sprightly light-weight. John Young and Julius Lang have just finished repainting and varnishing their respective establishments the new color adopted in both cases for interior finish being a bewitching pale green that is guaranteed to bring out the best points of roses and carnations and make grade number 2 equal to grade number 1, and to exercise an irresistible charm over the critical buyer.

The quality of stock seen at the various wholesaler's is improving daily. Roses are heavier in bud and stem and better as to color. The demand is so light, however, that they do not realize any better returns yet on this account. A slightly improved call for lily of the valley is noted, $2 a hundred being the figure at which most of it is sold, a price that cannot possibly yield any profit to the grower. Garden flowers such as hydrangeas, gladioluses and dahlias are abundant and asters continue to come in in large quantities.

Frank McMahon has just finished and planted four new rose houses at Little Silver, each 450 feet in length, which added to his large establishment at Seabright makes Mr. McMahon one of the largest growers for this market. The new houses are devoted one to American Beauty one to Meteor and two to Bridesmaid and Bride, one bed of the latter being grafted stock.

John Flinte, employed by M. H. Krushka at Lawrence, L. I., disappeared a few days ago taking with him the sum of seventy dollars which he had collected and a new suit of clothes which he had charged to Mr. Krushka.

Ernst Asmus has gone with Benj. Dorrance on a hunting trip in the wilds of Nova Scotia.

The Monmouth County Horticultural Society's annual exhibition opened at Red Bank, N. J., on Wednesday, September 1.

H. C. Steinhoff sailed on a European trip on August 21.

A. Warendorff is remodelling the interior of his store on Broadway.

Henry W. Gibbons, who has for many years been connected with the firm of Messrs. Hitchings & Co., has now located in business for himself at 136 Liberty street, where his old friends can be sure of a hearty welcome.

Mr. W. A. Stiles, formerly in charge of *Garden and Forest*, and now New York park commissioner, is seriously ill.

Philadelphia.

THE EXCURSION TO DREAR'S NURSERIES—AN INSTRUCTIVE AND ENJOYABLE DAY—BUSINESS PICKING UP A LITTLE.—TWO YOUNG FLORISTS ARRIVE.

The event of the week was the third annual excursion given by the H. A. Dreer Co. last Tuesday, the 31st ult., to their mammoth establishment at Riverton, N. J. The large steamer Twilight had been chartered for the occasion, but even its roomy decks were not sufficient to hold the great number who responded to the firm's invitation. The excursion was an all day affair, the steamer being advertised to leave the wharf at 10 a. m.

MILTONIA VEXILLARIA SUPERBA.

At that time twelve hundred and fifty persons were aboard (the boat's capacity) and the overflow, some three hundred and over, were obliged to take another steamer fifteen minutes later.

The excursionists were a jolly crowd. The private gardeners were largely in the majority and nearly every man had his best girl along, while some brought as well their cousins and their aunts. The day was an ideal one and from the time the start was made until the last boat drew up to the wharf on the return trip there wasn't a hitch of any kind. This annual outing will be looked forward to with much pleasure each year by the gardening fraternity of this neighborhood, as the visit to this wonderful establishment is always a treat to the practical florist and gardener, and when in the company of so many good fellows and their families it is so much more attractive that few care to miss it.

After a delightful ride up the river, the landing at Riverton was made, the genial Walter Mott being on the landing to welcome the party. A five minutes' walk through the shady streets brought the gates of the establishment in view, where as each gent'eman passed in he was presented with a small package of cigars, the gardener's solace.

Entering the large connecting house next the office Mr. Wm. F. Dreer took the guests by the hand and welcomed them, after which they spread out in all directions and proceeded to take in the beauties of the place. Each department was at its best, in fact while one expects to see large stocks of well grown plants he is simply amazed at the extent to which all the departments have grown the past season. We doubt if there are any nurseries in Europe that can equal the extent of this establishment when the great variety of stock grown is taken into consideration. Side benches of this or that kind of plant have given way to a house or houses of the same, and still the stock is increasing, and even with all the recent additions it would seem impossible to house all the plants growing in frames outside before cold weather sets in, as every inch of inside space seems fully occupied at present. However the large packing bench was also full of orders delayed only because all hands were busy entertaining the guests of the day. It is a fact that this large table, one hundred feet long by about eight wide, is never cleared, the packers never being able to quite catch up to the order department. We will not attempt in this article to describe the stock here in detail; we could not do it justice; it must be seen to be appreciated. The greatest strides have been made probably in larger sizes of all popular palms which can now be had in quantity. Cocos are here by the house full and there are ferns ad libitum. The outside grounds were beautiful with their wealth of bloom, the large space given to cannas being a gorgeous sight. Here were to be seen all the latest varieties as well as all the popular introductions of the past. The planting of the varieties in color blocks, all the shades of one color together, was a happy thought and enabled the visitors to make their own comparisons as to which were the best. The water lily ponds were much admired, and no doubt that swampy spot at the bottom of many a private lawn will soon be turned to account, there being ample evidence here of just how to do it and make it one of the most beautiful and attractive parts of the estate.

The luncheon served in the rear of the old farm house drew the attention of the visitors from their tour of inspection and swamped for a time the best efforts of the entire force of waiters. Matters were straightened out in a little while, however, and after the inner man was appeased there was an exchange of social greetings and another look at the beauties of the grounds or houses, as most interested the visitors.

A splendid exhibit of cut canna blooms, a dozen or so flowers of a kind arranged in dishes of sand on a long table in one of the large sheds, was a feature; there were one hundred different kinds correctly labeled, and they showed the individual character of the flowers better than any other way. There was also an exhibit of double petunias of the firm's special strain and a collection of cut dahlias, another of asters and a dish or two of the new Allegheny hollyhocks, which are much superior to the older varieties. A table containing thirty-eight dishes of tomatoes, all different varieties, made a very interesting exhibit.

At 4:30 and 5 o'clock the visitors embarked for the return trip, some going direct to the city while others were given a ride down the river to the Navy Yard and were landed in town about 7 p. m. All were much delighted with their trip and the pleasures of the entire day. It is considerable of a job to manage a crowd of 1,600 to 1,800 people when one considers the different individualities that go to make it up. The firm deserved great credit for their enterprize and all present no doubt appreciated their generosity and the opportunity it gave them to see the latest and best novelties and all the popular plants.

We cannot close without saying a word of praise for the very neat and cleanly appearance of the entire establishment. There wasn't a speck of dirt to be seen anywhere in the houses (barring the soil in the pots, too commonly called dirt). Outside in the trial grounds and walks, not a piece of gravel even was out of place and all the various plants and beds seemed to be striving to bloom their prettiest. Mr. J. G. Eisele's kindly face was missed, he not having returned from his European trip; he is expected home about the 20th of the present month.

Business in the stores is picking up a little and the quality of the stock is getting better.

Prices, however, remain about the same.

Dennis Connor, of Lansdowne, is the proud father of another son. Ground has been staked out at his place for another house, the popular way the growers have about this city of celebrating such an event.

Edward Reid has moved into his new

store and will now be much better able to handle his growing commission business. By the way, he was presented with a daughter the past week; his step seems a bit firmer, and his bearing more erect since this important event.

John Westcott and W. K. Harris are off on a fishing trip. K.

Chicago.

CLUB VISITS HINSDALE.—AN IMMENSE ESTABLISHMENT.—BUSINESS CONDITIONS. —VARIOUS ITEMS.

The immense establishment of Messrs. Bassett & Washburn at Hinsdale was visited by the Florists' Club last Saturday afternoon. There were about 50 in the party including several from outside points. Indiana was represented by Mr. E. G. Hill, of Richmond, and Messrs. Wm. Blackman, Julius Niednagel and another florist, of Evansville. St. Louis was represented by R. F. Tesson, and Geo. Souster and family and B. O'Neil came in from Elgin. Including the recent additions the establishment contains about 310,000 feet of glass and it was quite a task to take merely a peep into each house. Everything was found to be in excellent condition. One house of Meteors planted last April was as fine a house of that rose as the writer has seen anywhere. The American Beauty fills an apparently endless number of houses. There are about 50,000 plants all told and all good. There is about an equal number of other roses divided among the various market varieties. A house of Souv. du President Carnot was in fine condition and promised a good crop of excellent blooms. In carnations a house of Jubilee, carried through the summer on the benches, looked well. The bottoms of nearly all the benches are of drain tile set closely together. Probably the most impressive thing about the new range of glass was the pair of huge Kroeschell boilers, each of 150 horse-power. A smaller one adjoining was of 65 horse-power, and there is now on the place boiler capacity amounting to 765 horse-power. Including the city salesroom there are 41 men on the pay roll. The new house for asparagus and smilax is 30x300 and contains 3,000 plants of asparagus and 7,000 of smilax. Among other stock being grown are 40,000 Lilium Harrisii 25,000 carnations, 325,000 valley, 75,000 tulips, 20,000 chrysanthemums, 25,000 Roman hyacinths, 20,000 Von Sion narcissus, as well as adiantums, sweet peas, violets, mignonette, swainsona, etc.

After the inspection of the houses and contents the party gathered on the lawn by the residence and partook of a lunch kindly provided by the hosts, after which there were short addresses made by Messrs. E. G. Hill, Edgar Sanders, Wm. Blackman, R. F. Tesson, Geo. Souster, B. O'Neil and others, interspersed with songs by the trio composed of Messrs. McKellar, Winterson and Kissell. The solo by Mr. Sanders must not be overlooked. He sang the cobbler's song and mended Mr. Stromback's shoe at the same time with great effect. Mr. Hill didn't see much chance for the small Indiana florists to compete with such establishments as that just inspected and hoped Mr. Bassett would leave just a little of the field for them. He spoke of the recent convention of the S. A. F. and of the next one to be held at Omaha, urging all to attend next year and show the east that the western florists were alive to the benefits conferred by the national organization. Mr. Souster extended an invitation to the club to visit his place at Elgin. A vote of thanks to Messrs. Bassett & Washburn for their kind hospitality was unanimously passed. The afternoon was certainly most profitably and enjoyably spent and will long be pleasantly remembered by those who particlpated.

The next meeting will be held at Vaughan's greenhouses at Western Springs the afternoon of Saturday, Sept. 11. Train will leave Union Station at 1:30 p. m. A particularly interesting feature at this place will be the fields of cannas.

Mrs. Hughes, mother of Horace Hughes, and wldow of an old time florist, died recently.

Mr. D. S. Heffron has been sending to E. H. Hunt some exceptionally fine asters, cutting some with three-foot stems. Mr. Heffron has had no trouble with the disease except on rather poor ground. He uses lime on the ground before planting in spring as a preventive.

Miss Emily Lytton, of the Illinois Cut Flower Co., has returned from her vacation.

Several of the wholesalers report a marked increased in out of town demand the early part of the week. Almost all kinds of stock is plenty and in general demand rather light. Carnations are much more plentiful this week and in consequence prices have weakened. A few of the best fancy are still held at $1 per hundred but the bulk of the stock goes for less. The quality (all field grown) is very fine, Scott being exceptionally good just now. Mrs. Fisher, which is largely grown for summer, is now at its best and is received in steadily increasing quantity. Daybreak is scarce, the few sent in being of much better color than is usually seen in field grown stock.

The drouth which has existed for some time was partially broken this week. Copious showers fell at various places around Chicago, but this was confined to very small areas. Soaking rains are reported at some localities while not a drop of rain fell in territory scarce a mile away. Many growers are now busy benching carnations, others are waiting for rain. There appears no scarcity of good sound stock to fill the houses. The majority of the growers set out nearly double the amount of stock plants needed for their own use. This will enable them to select the very best for their needs.

The past week we have been having quite warm days, but very cool nights which has made firing necessary most of the time for the rose grower. Quite a number of growers who neglected to fire have now to contend with a crop of mildew.

Hills and Jakobson of Maywood have taken counter space with C. W. McKellar. They grow a line of general stock.

Visitors in town: Misses Harding and Vail, La Porte, Ind.; Mr. Wiegand, Indianapolis, Ind.; Wm. Currie, Milwaukee, Wis.; and those noted in report of club outing.

St. Louis.

BUSINESS IMPROVING —STOCK BETTER.— NEW STORE —A. BERDON RETURNS TO THE TRADE —CLUB MEETING SEPT. 9.— CHRYSANTHEMUM SHOW ARRANGEMENTS. —BOWLING —NEWS NOTES.

Stock is looking better every day and some of the down town florists report that the business is also looking up somewhat, and transient trade has begun. The opening of our exposition next week will do the florists about town a world of good, as lots of stock will be used for decoration, mostly palms and a few cut flowers.

Brides, Meteors, La France, Kaiserins, Testouts, Bridesmaids and Perles, are now coming in in fine shape, but as yet with short stems. Those with the longest stems bring $2 to $3 per hundred, others with short stems are $1 and $1.50. Beauties, too, are better and are selling well, as good long Beauties are very scarce.

Carnations are still short in supply and in good demand, price $1 per hundred. Housing carnations is progressing favorably and the growers have plenty of work before them just now. Asters are very plentiful and only the large white and purple are in demand. The extra fine ones bring $2, but the bulk go at 50 cents and $1 per hundred. Plenty of tuberoses stalks, both single and double, sell at from 3 to 5. Gladiolus stalks are a glut and no sale for them at all. Good stalks are selling at 2.

Building is being pushed as much as possible, some of them being a little late.

Wm. Clamp, of Webster Grove, Mo., is sending in a fine lot of La France roses. Mr. Clamp reports that he will have a fine cut of roses, violets and carnations this winter.

T. W. Guy, of Kimswick, Mo., is cutting some very fine Scott carnations, the best that come to this market just now.

R. F. Tesson got back from Chicago sooner than was expected. Bob reports that he had a good time among his fellow craftsmen and that everything looks in good shape for a good winter's business.

Ellison & Tesson will open their new store, recently vacated by Fred Weber, 3134 Olive street, by the end of the week.

Luther Armstrong, the only St. Louis man at the convention, got back last week and reports that he had a good time and was glad he went. While in the east Mr. Armstrong introduced his everblooming tuberoses and claims he met with good results.

Our visitor last week was Mr. S. Skidelsky, of Philadelphia. Business has been good with him and he was happy when he left.

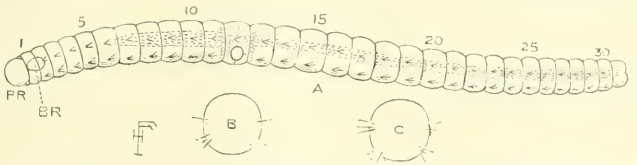
Park Commissioner Ridgely left the city on a vacation and will be back some time next week. Supt. Pape is acting as park commissioner just now. Mr. Pape reports that the parks are not looking well, owing to the very hot and dry weather.

The Beyer Bros. did themselves proud in decorating Concordia Park last week for the fifteenth harvest festival of the Schwabenuntersturtzungs verein. The affair was a success and it lasted two days.

A. Berdan has gone back to the florist business again and is building two new houses 25x100 at Kirkwood to grow roses and carnations for the trade. Mr. Berdan has been out of business for the last two years and says that he is glad to get back again in the business he loves so well.

J. M. Hudson, late of 1002 Olive street, will be found after the 15th with the Mound City Cut Flower Co., 1322 Pine street.

President-elect Halstedt says that he hopes to see a full attendance at the club meeting next Thursday, September 9. The installation ceremonies will begin at 3 p. m. sharp. Afterward some very important business will be transacted and it will be of great interest to all of the members.



The chrysanthemum show will be held this year in a large vacant store down

town as the charge of the exposition management is too great. The committee will meet some time this week and decide upon a location and then go ahead with the show. The committee to a man is in favor of leaving the exposition for this year at least.

At the bowling club Monday night we had a full attendance and rolled our regular three games with the following result: C. Beyer 590, first; Fred. Weber 563, second; and Beneke 562, third. For high single score Beneke was first with 246, Beyer second with 206, and Weber third with 202. This ended the August series of 15 games. C. Beyer wins the average medal and Beneke the high single score. The scores follow:

NAMES.	GAMES.	TOTAL.	AVERAGE.	H. SCORE.
C. Beyer	15	2745	183	242
E. Schray. . . .	15	2578	172	223
Beneke	15	2534	169	246
Kuehn.	15	2466	164	192
Sanders	15	2396	158	196
Fillmore. . . .	15	2007	134	179
Kunz.	11	1845	168	224
Young	12	1720	136	180
Weber	8	1322	145	202
Helwig.	3	446	148	189

J. J. B.

THE ASTER WORM, GREATLY MAGNIFED. ACTUAL SIZE ONE-EIGHTH INCH
B, hind segment. C. front segment. Reproduced from Gardeners' Chronicle.

The Aster Worm.

A writer in the *Gardeners' Chronicle* holds that the aster disease is due to the presence of a minute worm, about an eighth of an inch long, white or silvery when viewed under a pocket lens. This worm is probably new to science and has been given the name "Enchytræis parvulus." The worm lodges under the skin of the roots and sucks the juices of the plant, thus preventing the plant from sending moisture and nutriment through the stem to the leaves.

"Naturally enough it will be asked, 'What is the remedy?' It must not be assumed that all decaying asters are eaten of worms. If, however, the lens reveals their presence, drastic measures must at once be adopted. If it were possible, the moment sickness showed itself, to lift the plant, excise the injured part and reset it, the evil might be arrested. There would, however, still be two dangers. The plant might be unable to recover, and if it did, the eggs of the worm, which are infinitely small, and would never be detected, may have been deposited in the tissues. This being so, young worms will soon appear again, and the plant succumb after all. The only way to ensure the destruction of the pest when once in the plant, is to uproot every sickly individual and consign it instantly to the flames."

Buffalo.

Usually when returning home from a week's convention, repose and quietness is sought, and in some cases needed, but that was not to be the lot of the Buffalo boys, for on our arrival Saturday evening the advance guard of the G. A. R. was here and the city seemed already crowded, but later there were four hundred thousand strangers within our gates including 50,000 old veterans of the war. I must be excused for a few comments on this wonderful gathering such as no other nation in the world sees the like. Several countries could parade an army of active fighters 40 times as great as our standing army, but no country attempts to make such a gathering of patriotic veterans who seem indeed to join hands as brothers and partners in the great cause for which they fought and won.

President McKinley was here and headed the grand procession on horseback, and Secretary of War Alger was here, and so were men in blue from all walks of life, and in all this crowd none looked more the veteran and few looked more the trim natty soldier than comrade J. D. Carmody of Columbia post, Chicago, whose guest at a grand banquet was President McKinley.

With all the parades, flags and music I never realized till last evening where the great pleasure to the old soldier came in till I attended a camp fire. A neighboring doctor entertained his old regiment, the 1st New York dragoons, of which about 175 are left to tell the story, and to hear them recite their old stories of battles won and battles lost, their privations and their grim jokes, would melt a much harder heart than the one your correspondent owns. No wonder the old boys love to gather together once a year.

This gathering has naturally brought a few old soldier florists to town and florists who never shouldered a musket. Among those who called at Cold Springs were A. Claus and wife, of Springfield, Ill.; T. Murdoch, Titusville, Pa.; Andrew Washburn, Bloomington, Ill.; E. D. Spaulding, Jamestown, N. Y.; A. Ringier, Chicago; W. C. Rockwill, Bradford, Pa.; and a young man from Lancaster, Mass., by name E. O. Orpet. Mr. O. is staying with his old friend Henry Swift, of Cleveland avenue. You seldom meet a greater gardening enthusiast than Mr. Orpet and up to date our acquaintance is all too short.

We had no time before to tell you of the very pleasant outing the florists had on the 13th. We went to the beautiful and well kept Bedell House on Grand Island. There was a large attendance of all ages, from the boss to the errand boy. A few old heads were conspicuous by their absence, which should not be. There was baseball and athletic games, mostly handicaps, and winding up with some bicycle races. Then a most genteel repast, a little (very little) oratory, the distribution of prizes (a most pleasant task kindly allotted to your humble servant) and then the light fantastic till the boat left the wharf. A well-earned vote of thanks was given to the committee of arrangements, who were Messrs. John Milley, Wm. Legg and W. F. Kasting, and well and smoothly they did their part.

After telling you of the pleasant part of our existence it is now painful to turn to something very sad. On Sunday morning, August 15, Mr. C. F. Christenson lost his estimable wife. Mrs. Christenson had been ill for several months and for several weeks very seriously, but a fatal termination was not expected. Locally no one among the craft is better known or more popular than Chris., and although he never took a prominent part in our national society, and was peculiarly a home man, many are the visiting florists who will never forget a call on Mr. Christenson. A hearty welcome is no name for the reception given to a brother florist, were he drummer or otherwise. Our friend in his bereavement has the greatest sympathy of all who know him here, and scores of visitors to our city. Just as Mr. Christenson had reaped his reward from many years of toil and talents, and could look forward to some years of leisure he has to meet the saddest blow of all. Yet we trust he will bear his great loss with his usual good sense for he has his duty to the world and his young son yet to fulfill.

W. S.

Boston.

SETTLING DOWN AFTER CONVENTION —BUSINESS DULL.—A VISIT TO DEDHAM.—GIFT TO THE ARNOLD ARBORETUM.—THE FIRST VIOLETS.—WARREN EWELL'S NEW DIGNITY.

All settled down and making active preparations for the winter campaign; convention a thing of the past; its problems either solved or carefully shelved for solution next year at Omaha; asters poor in quality but selling fairly well; carnations bringing good prices for the season; carnation plants in the field only about half size; violets in field fine; seashore and mountain trade closing up and summer visitors taking their departure; this about covers the situation at present writing.

Flower trade is dull in all its features. Asters, gladioluses and lilies fill the florists' windows, roses and carnations huddle in the refrigerators but customers are conspicuously absent and even a funeral order is a scarce commodity. Tuberoses are beginning to come in freely but sales are slow.

The garden committee of the Mass. Horticultural Society and a number of guests, of whom Mr. Wm. R. Smith, of the Botanic Garden, Washington, was one, visited the beautiful estate of Mr. G. A. Nickerson at Dedham, on Thursday afternoon. Mr. David Monteith, the gardener, escorted the visitors through the greenhouses and grounds and the broad lawns, grand forest trees, specimen evergreens, flower garden, etc., were inspected with interest and the well kept appearance of the extensive grounds was enthusiastically commented upon. A drive to the residence of Mr. Monteith found a delicious lunch ready and after a kindly welcome from the lady of the house a vigorous attack was made on the good things so generously provided. The party returned to the city about 6 p. m. well pleased with the afternoon's outing.

The Arnold Arboretum has received a memorial gift of $20,000 from Miss A. A. Bradley in memory of her father, the late W. L. Bradley, who was deeply interested in arboriculture.

The annual plant and flower show of the Mass. Horticultural Society is in progress this week. Full account in next number.

H. Huebner had the honor of bringing the first bunch of violets for the season, on August 23. They were single and good.

Warren Ewell has acquired an added

dignity of carriage since having been adopted by the whole country at the Providence convention.

The surroundings and atmosphere of the Hub are very congenial to Mr. W. R. Smith, who has honored us by tarrying a week after the convention.

St. Paul.

COLD WEATHER.—STORM DAMAGES OUTSIDE STOCK.—TRADE VARIABLE.—AN ORCHID COLLECTION.—BUILDING.

Cold weather during the past week has compelled the careful growers to keep fires going nearly every night. A heavy rain the night of August 30, destroyed a great deal of outside stock, knocking it down and otherwise demolishing it.

Trade has been variable. A large amount of funeral work has diminished the surplus stock and good roses are in good demand, white in particular being quite scarce.

A visit to the private conservatory of Dr. R. Schiffman, one of our most substantial and public spirited citizens, is full of interest. He has the largest and finest collection of orchids in the state and is a good authority on their culture. His latest purchase was the Corning collection of cattleyas consisting of several hundred plants, many of them rare and beautiful varieties. Altogether his collection consists of upwards of 500 plants. At present there are but few in bloom though a particularly fine variety of stanhopea in full bloom was very attractive. All of his plants are in the very pink of condition and show the care and study he has devoted to them.

A. S. Swanson has built two or three houses this summer which I have failed to note. As soon as I have the opportunity to visit them I will do so.

O. Olson, of Holm & Olson, is away shooting chickens, or attempting to (prairie chickens).

Recent callers, Mr. Hoyt, representing the Cleveland Seed Co., and S. B. Dicks, of London. FELIX.

Pittsburg.

THEY RETURNED BY RAIL.—BUSINESS IMPROVING.—A NEW MARKET HOUSE.—BUILDING.—VISITORS.

Almost all of the Pittsburg contingent have returned from the S. A. F. convention and express themselves as very well pleased with their trip to Providence. Several of the florists intended when they started from here to return by same route, viz., via Norfolk, but after enjoying a taste of old Neptune in the way of seasickness when going to Providence they all returned by way of New York and Philadelphia, the ocean part of the trip having lost a great deal of its attractiveness to them.

Business is showing some improvement. The demand is increasing a little and a better feeling prevails. From present appearances a fair fall trade will be had, for it looks as if "hard times" had been given a backset and an era of prosperous times has commenced.

Within the last ten days a project has culminated in the formation of a company which will give to East Liberty, the east end of our city, the finest market house in the United States, and the largest in this part of the country. It will front 200 feet on Beatty street, running back on Baum street and Centre avenue, where at the east end of it it will be 290 feet wide. There will be a floor space of 58,000 square feet. The company will aim at three things in its construction—plenty of light, good air and cleanliness. The structure will be of steel, one story in height, but magnificent architecture, exterior walls of Pompeiian brick, while the interior walls will be of light colored enameled brick, the building so constructed that it can be entirely cleansed by using hose and water. The stalls will be raised on iron feet six inches from the main floor, which will be of tile, so there can be no accumulation of refuse. A cold storage plant will also be a feature and each of the stalls will be fitted up with ammonia pipe so as to do away with the use of ice in them. There will also be an electric light plant fully up to date and a modern system of steam heating for the cold weather. The building will cost at least $125,000 and the ground $75,000 more. Gardeners will be especially catered to. It is more than probable that the florists will take advantage of the opportunity and will more than duplicate the Allegheny market in the number of stalls devoted to the flower trade. There will be every chance of success too, for the district that legitimately belongs to this center has a population of over 150,000, or more than three times as many as Allegheny City had when their fine market house was erected.

A. G. Smith, of Neville Island, has erected two houses 35x75 for the purpose of forcing early vegetables. In addition to these he will have 500 hotbed sash. With these alone he has been very successful, but to keep abreast of the times he has put up the greenhouses. He will use natural gas for fuel, being right where it "grows."

Mr. Arnold Ringeer, with W. W. Barnard & Co., Chicago, and Mr. Boas, with Edwards & Docker, of Philadelphia, were visitors this week. REGIA.

Cincinnati.

The general run of business has been slow the past week, but our wholesale houses report a marked increase the first part of this week. Funeral work constitutes the bulk of the trade now and some of our storemen complain of not having enough of that. Roses are in fair demand with an equal supply. Asters are coming in in abundance, and sell at 50 cents per 100.

The Hoffmeister Floral Co. have been making a creditable display of gladiolus at their Elm street store the past week and report business fairly good. The same may be said of the Huntsman Floral Co.

Mr. and Mrs. Geo. Meeks of Covington have returned from a delightful trip to the Nashville exposition, stopping also at Louisville.

The regular monthly meeting of the Cincinnati Florists' Society will be held September 11. A full attendance is expected.

A happy wedding which occurred Wednesday September 1 was that of Miss Flora Hill the eldest daughter of Mr. and Mrs. E. G. Hill, to Mr. Fred. Lemon. Miss Flora is a favorite of Richmond's social circles and a very accomplished young lady. Mr. Lemon has been in the employ of Mr. Hill the past few years and won a host of friends at Richmond. Please accept our congratulations.

H. SCHWARZ.

Toronto.

Garden parties and entertainments in connection with the British Association and the final banquet made things a little lively for some of the florists last week but otherwise the usual summer dullness prevails.

The boys who exhibit plants at the Industrial fair are all very busy to-day getting their goods into shape.

We were honored with the presence of crowds of the Grand Army people from Buffalo last week, many of whom expressed great surprise at seeing us so far advanced in the ways of civilization.

The Ontario government has started to build the conservatory back of the Parliament buildings, but it is much to be regretted that it will be so small and insignificant—50 ft.x22 ft. Mr. Houston tried hard to get a building worthy of the situation but was unsuccessful.

Cannas Italia and Austria have been flowering well in some gardens, but they appear to be no good out doors; the least sun burns the petals. E.

Syracuse, N. Y.

EXHIBITS AT STATE FAIR.—GOOD DISPLAYS IN FLORAL DEPARTMENT.—KEEP CARP OUT OF PONDS OF AQUATICS.

The exhibits in Horticultural Hall at the New York State Fair, held here August 23 to 28, far eclipsed previous displays in both quality and quantity, the only unfavorable state of affairs being lack of space. Fine groups of tuberous rooted begonias, French cannas, ferns, stove and greenhouse plants and geraniums, the latter comprising forty-six well-flowered named varieties, were staged by P. R. Quinlan & Co. In the professional gardeners' class Messrs. D. Campbell and C. Barson also staged some grand groups of both flowering and foliage plants, most notable among them being their ferns, many of which measured from 5 to 6 feet in diameter and showed high culture. Geo. Ham had a beautiful collection of specimen geraniums.

A great advancement over previous years was noticed in the way of staging cut flowers. Instead of being put in sand and moss nearly everything was put in glass jars, of which over 2,000 were used. The flowers are not only kept fresher and shown on long stems, but the work of staging is greatly facilitated. About 1,500 spikes of gladiolus were shown, making a most attractive display.

Asters were in abundance and were very fine. It must be remarked the amateurs, who were numerous, put up displays of these favorite annuals that would, it is safe to say, be hard to beat anywhere. In the florists' class Mr. Bechstedt, of Oswego, put up a collection that was superb, the variety Comet being especially good. The general collections of flowers were large and numerous, some of them containing over 200 varieties. Messrs. Ellwanger & Barry, of Rochester, staged some fine perennial phloxes, the color, size of flowers and trusses being of the highest standard. Peter Crowe, of Utica, and George Savage, of Rochester, were the judges.

The exhibit of different species of trout from the state hatchery at Caledonia, N. Y., which occupied the center of the hall was very interesting and attractive, the aquariums being decorated with Farleyense ferns, mosses and small Cocos Weddelliana. Mr. Marks, one of the fish experts in attendance, gave some valuable information concerning the kinds of fish most desirable and those undesirable for ornamental waters where aquatic plants were grown. He regarded carp as very destructive and remarked if you need a pond cleaned of weeds no other work was necessary than to put some good sized carp in. After listening to Mr. Marks' narration of how they worked their destruction by first chewing off the

foliage and stems, and then grubbing out the crowns Mr. Campbell replied he had been troubled in a like manner every year with his water lilies and had always attributed their destruction to musk rats. The only fish he had in his ponds were large carp and he had now come to the conclusion that they were the offenders.

Although the date was too early to show fruit with their proper color, an enormous display was made, some 7,000 plates being staged. The collection of apples from the Experimental Station at Geneva, N. Y., was most noteworthy, also pears and grapes from Ellwanger & Barry, of Rochester. The Western N. Y. Hort. Society carried off first honors for largest and best display of fruit, the Central N. Y. Hort. Society being second.

ALPHA.

Portland, Me.

Portland had a distinguished visitor last week in the person of Mr. W. R. Smith, Supt. of the Botanic Gardens at Washington. He was the guest of Mr. J. A. Dirwanger and made a pilgrimage in company with that gentleman to the grave of his old friend, Wm. Pitt Fessendeu, in Evergreen Cemetery.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a young florist. Can furnish good references. Box 303, Portsmouth, O.

Thorburn & Co., New York bulbs.

Greenhouse Fire Insurance.

Now that steps have been taken looking to the formation of a mutual company to insure greenhouses against fire, the time has arrived for those who desire such insurance to make application for same. If a sufficient number make application the work of perfecting the organization will go forward. It now depends on the owners of greenhouses whether they shall have mutual protection against fire. Applications may be addressed to any one of the committee in charge of the matter as follows: E. H. Michel, St. Louis; J. G. Esler, Saddle River, N. J.; E. A. Seidewitz, Baltimore; M. A. Patten, Lowell, Mass.; W. J. Vesey, Ft. Wayne, Ind. The plan proposed is outlined on pages 72 and 73 of our issue for August 21.

MR. R. ULRICH, of New York, formerly in charge of the World's Fair Landscape Dept., is now laying out a tract of 5,000 acres at Montauk, Long Island.

LENOX, MASS.—At the regular meeting of the Lenox Horticultural Society on Saturday, September 4, Mr. A. A. MacDonald will read a paper on gloxinias and begonias.

WOOD BROTHERS, FISHKILL, N. Y

Albany, N. Y.

DEATH OF ERASTUS CORNING.

Hon. Erastus Corning died suddenly from apoplexy on the morning of August 30. Mr. Corning was prominently identified with the social, business and political life of Albany and was universally held in the highest esteem. It was, however, as a patron of horticulture that Mr. Corning was best known to our readers and there are few who have not heard of or visited his grand collection of orchids at the beautiful estate in Kenwood. Under the skillful care of that grand old gardener, Mr. Wm. Grey, this collection attained the distinction a few years ago of being the finest in America. Mr. Corning was an ardent lover of horticulture and the relations between him and his gardener were of the most intimate and friendly nature. The announcement of his sudden death causes widespread sorrow in this community.

Ivy Leaves.

From "S. M." comes the following: "Please tell through your columns how to prepare English ivy leaves for design work and oblige."

The ivy leaves are often produced under a bench, sometimes on a wall, but wherever they are grown they are always in need of a sponge before being used in a wreath or design. Instead of water either from the pump or hydrant, which is liable to dry and leave anything but a fresh green appearance, take a piece of cloth saturated ever so little with sweet or olive oil and give the surface of every leaf a rub. It will give them a fine glossy appearance and no odor that can be noticed. WM. SCOTT.

Newport, R. I.

On Thursday evening the committee of the Florists', Gardeners' & Associates Club held a meeting to ascertain "where they are at," and the agreeable fact was ascertained that after paying all bills incurred in entertaining the convention visitors there will be a small balance left in the hands of the treasurer. Well done.

LACONIA, N. H.—Frank P. Grant is financially embarrassed. His liabilities are upwards of $2,200, of which about twelve per cent. is owing to Boston wholesalers. Assets are about $300. An attorney is trying to settle for him on a basis of 15 cents on the dollar.

1000 VIOLETS—Marie Louise, 2½-in., $2.50 per 100; $20.00 per 1000.

COLE BROS., Peoria, Ill.

Terre Haute, Ind.

The flower business, despite the bustle and bustle noticeable in other lines, is still dormant, an occasional funeral design being about all that is being done at present. However, it need hardly be added that this stagnation is but temporary.

Mr. L. Heinl has recently returned from a trip to St. Paul and Minneapolis. He reports having enjoyed a good time, being much benefitted by the trip. Mr. H. has overhauled his entire plant and has rebuilt four houses. Three of these, intended for roses and carnations, cover each 127x20 and the fourth one, for ferns, 12x47. As Mr. Heinl never does things by halves, it goes without saying that no expense has been spared to make the houses models of their kind. The very best material as well as all the modern improvements have been used throughout.

A sight well worth seeing is a house of Nephrolepis cordata compacta grown by Mr. J. G. Heinl. The stock is in perfect condition, the plants looking exceptionally fine and well grown. Mr. Heinl's description of his recent tour through Mexico, is both interesting and instructive. Among other things he speaks very entertainingly of Mexico's native flora. Immense trees of Ficus elastica, producing leaves of great size, are quite common in that country. Adiantums attain a size that it would be hard to compare with anything of their kind here, while Bougainvillea glabra is grown to perfection both as to size and color, some specimens attaining a height of 25 feet and over. Tradescantias and cannas of immense size and beautiful color abound everywhere, the former being grown on the terraces in a way to produce the most charming effects. While in the city of Mexico, Mr. Heinl took a stroll through the flower market, which he describes as something akin to our average markets, except the prices realized for flowers. Everything from a native orchid to the humblest flower can be had there and had for a song at that. Everything is cheap, too cheap to insure that country's prosperity. A large wreath, for example, of the kind that would sell here at this season for $3 or $4 can be had in Mexico for $1, and a Mexican one at that.

Mr. Henry Graham has things in tip top shape, being fully prepared to do a rushing business during the coming season. HOMO.

MARBLEHEAD, MASS.—The most beautiful and popular event of the summer season at Marblehead is the annual flower show. This year's exhibition was the seventh anniversary of the affair, and it ranked fully equal to its predecessors. It took place in Abbott Hall on the afternoon and evening of August 28, and was attended by both permanent and transient residents in large numbers.

EXPERIENCE TEACHES

all things and **WISE** men will learn by the experience of others how to avoid

FOLLY.

We have been telling that we make a good boiler; that it will do good work and save fuel. Astonishing as it may seem, many florists have

BELIEVED

our statement and have bought our boilers and profited thereby. Others have not believed them and have kept right along using

"ANY OLD THING"

that wastes their time and money, imperils their stock and wears their patience. To this large class we would say **DON'T** believe us, but **DO** believe persons who have had experience with the boilers and note what they say.

For instance:

M. S. WORDEN, North Adams, Mass.,

Writing us recently says: "I am much pleased with my No. 12 Little Giant Hot Water Boiler, and it is a "Giant" indeed, for it heats so much that I am thinking of building just as much more greenhouse as I now have, and feel confident it will take care of the whole all right. You need not hesitate at any time if any one wants to know about the boiler, to have them write me."

Our catalogue is **FREE** and our prices are **ENTICING.** **GIBLIN & CO., Utica, N. Y.**

Rochester, N. Y.

BUSINESS SLOWLY BUT STEADILY IMPROVING —OCCASIONAL SCARCITY OF GOOD ROSES —PRICES AS LOW AS EVER.—FIELD CARNATIONS IN FINE SHAPE.

For several weeks now business has slowly but steadily increased. A good many flowers are disposed of every day in one shape or another, more so than is usual at this season of the year, and we don't hear the retailers complain so often of the dull times, though we can not expect the chronic grumblers to admit that this year's summer trade has been in advance of former seasons. Whatever caused this increase in the demand can not be ascertained, but the fact that very few of the flowers offered daily in the wholesale market remain unsold, shows clearly that this stock is wanted by the retailer or else he would not buy it in such quantities, nor regularly every day as he does now.

The market is fairly well supplied all around with exception of roses, which occasionally have been scarce and often rather poor in quality. Asters are plenty and frequently have to take the place of carnations in making up designs. With all the lively demand, prices of flowers have remained as low as ever for the time of the year, but an advance may be looked for in the near future if the demand continues.

In the greenhouses nearly everybody is preparing for planting carnations, which are this year in very fine condition, owing perhaps to the long continued cool weather. Several violet houses have also been planted during the month of August and are promising to bloom early, but the bulk of the plants is in the field yet; less disease is noticeable among them this year, but it may come on later. K.

Congratulations to Mr. Gude.

Permit me to extend through your columns my congratulations to the S. A. F. on securing so able a man for its president as Mr. W. F. Gude, and to Mr. Gude on his accession to a position of such responsibility. Three cheers for the S. A. F. and its young president-elect, from the hills of West Virginia.

GUSTAVE OBERMEYER.

School for Florists.

Replying to "M. S." we do not know of any school where you may learn the florist trade. The nearest approach to such a school is the course in horticulture at the Missouri Botanical Garden, St. Louis. Address the director, Prof. Wm. Trelease, St. Louis, for particulars.

STILLWATER, MINN —Frank Berry has taken a three-year lease of the greenhouses of Kuehn & Nehring. He has also added three houses to his own plant, giving the latter a total of 7,000 feet of glass. As the leased houses contain 5,000 feet, he now controls a total of 12,000 feet of glass.

Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

UTICA, N. Y.—Peter Crowe has taken into partnership J. O. Graham, lately of Binghamton, N. Y. It is the intention of the new firm to erect additional greenhouses in the near future.

READING, MASS.—On the evening of August 31, a meeting was held for the purpose of organizing an amateur gardeners' society. Thirty-four names were entered on the roll and officers were elected.

MILLBROOK, N. Y.—The regular meeting of the Dutchess County Horticultural Society was held at Memorial Hall on the evening of Wednesday, September 8. An instructive paper was presented by Mr. Thos. Harrison upon "Outside fruits for the family table."

Rose Notes.

There will be little going on in the rose houses this month except the routine of cleaning, tying, and pinching off the buds but if we propose to keep everything neat and clean and in perfect order we shall not need to go in search of a job to fill in the time. We shall find it not a waste of time if we go over the benches once every week, and after picking off any dead or dying leaves scratch over the surface of the soil, it does not consume much time but does add to the appearance of the plants.

I would advise taking advantage of the cool evenings to fumigate at least once or twice a week, as long as we are not cutting any flowers the smoke cannot possibly injure anything, unless the house is too hot at the time, or the work is done by a very careless or inexperienced man. It is poor policy to wait until the plants are covered with fly and have crippled much of the tender foliage; it is much better to start in time and render it impossible for the fly to ever get a foothold.

The thrips that have been so troublesome on Beauties during the last few years seem to be extending their field of operation this season, and are to be found in quantity on Brides, Maids, Testout, Kaiserin, and probably other varieties. In some instances there seems to be actually millions of them to a house. I have found nothing so far that answers so well as an exterminator of this pest as tobacco smoke; it is no use to play at smoking though for thrips, it must be done thoroughly and frequently.

A gentle reminder that abundant ventilation at this season is very desirable may not be out of place, though I have harped on this string more than once during the last few months. As a rule we have a good many bright sunny days during September and October, with cool nights, ideal weather for rose growing, and we may turn this charming weather to good account by ventilating freely whenever possible, and so secure hardy, strong, and robust foliage and plants, exactly what we need to begin the winter campaign; or we may pamper our stock through fear of mildew or black spot, and find ourselves possessed of a lot of weak straggling things quite incapable of producing any really first-class bloom.

Hybrids intended for Christmas must be pruned not later than September 15. The best growers now prune this class of roses down very low leaving not more than from 6 to 9 inches of the current season's wood, in preference to the bending over system. The English growers I notice prune much lower than is customary in this country, but they start them very slowly and do not aim to have them in bloom earlier than February 1, and with their system severe pruning seems to be the proper thing. In my own experience I have found that those started up earlier than November 1, should not have the extra strong shoots cut back too hard, as the lower eyes on such wood are very slow to start. There is apt to be considerable spider on the old leaves that have fallen, and they should be taken out and burned, and everything in the house, on the benches and underneath put in good shape. The benches may receive a mulch at once or it can be left until the eyes begin to break. A good heavy syringe two or three times a day will be needed to moisten the soil and assist the eyes to push. If the outdoor temperature does not fall below 50° full air should be kept on both day and night. Pot plants that may be standing outside can be pruned and left there for two or three weeks with advantage, syringing and watering of course just the same as if they were in the greenhouse.

Carried over teas that have been properly rested should be cut back without delay. Some growers object to pruning a tea rose any further than to merely trim out a little of the thin wood and take the tips off the strong ones; others again cut out everything and leave only a stump. Good or poor success may follow either of these methods according as the plants are weak or strong or the cultivator is skillful or otherwise, but I think that a middle ground is much to be preferred to either extreme. One point however, I am satisfied on, namely, that tea roses may be pruned quite severely and sustain no injury, provided they are properly rested in advance. When there is sufficient head room I prefer to allow them to grow in an upright position, otherwise they will do equally well bent over, in the latter case, however, it will be necessary to trim out more of the small wood or it will eventually be smothered with the stronger growth. After pruning a cool moist air day and night will furnish the best conditions for strong vigorous growth.

ROB'T SIMPSON.

Sowing Rose Seed.

I have some seeds taken from a seed pod of a tea rose. I desire to plant these seeds and would like to know whether they should go through a course of stratification before planting, and if so how would you advise me doing the same, the seeds being now thoroughly dry and ripe. Also what kind of soil should be used?

SUBSCRIBER.

In reply to subscriber will say sow rose

seed as soon as ripe. Break the pods and separate the seeds. Pots or shallow boxes containing five or six inches of light soil supplied with good drainage is all that is needed to sow them in. Cover ¼ to ½ inch, firm moderately and place in a light airy position. Keep the soil moderately damp.

Rose seeds germinate with great irregularity; some will come in a few weeks, others two or three months, although they have been known to remain dormant for a year before making their appearance. This irregularity is probably due to the very hard shell of the seed.

ELMER D. SMITH.

Palm Notes.

What not to grow is sometimes of quite as much importance to the florist as the reverse of this question, and in the matter of palm growing there seem to be various pitfalls that beset the beginner, some of which may be briefly noted in the present paper.

One of the first suggestions to the tyro in the palm business is to avoid too great variety in stock, it being much more satisfactory to both grower and consumer if the first efforts of the grower are directed toward the production of only three or four species in thoroughly satisfactory specimens. Size is not by any means the only quality one should aim for in growing plants of this class, but perfection of shape, clean and healthy foliage, and also good substance of the latter, are among the most desirable points, for while every florist has some customers who can only be satisfied with quantity, yet it does not take such a great time to educate them to somewhat higher standards.

And as an example of what can be done by proper methods it may be stated that an ideal plant of the common Fan palm, Latania borbonica, in a 6-inch pot should hold *all* its foliage up to that stage, and as a matter of fact I have frequently seen plants of this useful species still holding the seed leaf when well established in 8-inch pots.

Of course it is useless to expect plants of the above description if the young stock is not given a reasonable amount of space and light, and shifted on from time to time before starvation compels the loss of the lower leaves. The kentias will also hold their foliage for a considerable time providing the plants are given sufficient space, and if kept clean and well cared for it is not unusual to see the seed leaves in good condition on a plant in a 6 or 7-inch pot.

Areca lutescens seldom holds the seed leaf as long as those above referred to, but from the fact that this species naturally throws out secondary growths around the base, it is comparatively easy to have well furnished plants if reasonable space and light be given.

Areca rubra has been tested by many growers, but is usually discarded after a few seasons, for while this species makes a graceful and handsome specimen, its foliage is tender and too easily injured to be a profitable decorative plant, and it also requires a somewhat high temperature to ensure rapid growth and good color.

The two palms variously known as Areca Baueri and A. sapida, and also as Kentia Baueri and K. sapida, but both of which are correctly rhopalostylis, find considerable favor with European growers of decorative stock, but being rather slow in growth while young, have not met with much demand here, and should therefore be taken up cautiously by the small dealer.

The rhopalostylis are however, much tougher and have more merit than Areca alba and A. aurea, two forms that are of similar character to A. rubra though abundantly distinct therefrom.

Euterpe edulis and Oreodoxa regia were both more common in the trade about twenty years ago than they are now, and while both are admirable for outdoor planting in the extreme southern states, yet neither have much value in a small state for florists' use, a spindly habit and sparse foliage being characteristic of these plants during the juvenile period.

Chamærops excelsa, C. humilis and Corypha australis are all of some value as vase plants and for an occasional decoration, but are rather slow in growth while young and not much in demand for retail sales. These three palms can be safely recommended on the score of hardiness, and in fact can be wintered in a temperature of 45° without injury providing they are not over-watered.

Among cocos, of which there are a number of species, the only really necessary one for the average dealer is the well-known C. Weddeliana, which is almost indispensable in filling ferneries and for low table designs. Of the other species of this genus, there are two or three which crop up from time to time, notably Cocos plumosa, C. flexuosa and C. Romanzoffiana, all of which are highly ornamental in large specimens, but in a small state have only simple leaves and remind one of Curculigo recurvata, though not as rapid in growth as the latter plant.

The geonomas also have but little value as florists stock, with the exception of G. gracilis, the latter being almost as graceful as Cocos Weddeliana, though not quite as easy to manage as the last named.

Seaforthia elegans and Ptychosperma Alexandræ are excellent plants for planting out in a conservatory, and are also of some use in a small state, but neither can be recommended to a customer with the same freedom one would use in presenting a latania or a kentia. And while both seaforthia and ptychosperma are easy to germinate and quick in growth, yet their foliage is soft and does not wear well in a dwelling.

The phœnix are a sturdy race of palms, and several sorts are easy to procure, but if confined to one species only I would recommend P. reclinata, this being one of the most rapid growers in the genus and bears exposure well, either for decorating or for house culture, and is much to be preferred to the common Date Palm, P. dactylifera.

W. H. TAPLIN.

Fancy Leaved Caladiums.

The accompanying engraving is from a photograph of the fancy caladiums in one of the greenhouses on the estate of the late Geo. W. Childs, at Bryn Mawr, Pa. Mr. John Hughes, the superintendent, gave the following details as to their culture.

The bulbs are potted in June, five to six large ones being placed in a 12-inch pot, in which the plants remain from first to last. The soil used consists of one part loam, one part rotten manure, and a spade full of sand and the same of bone dust to every twenty of soil. After the potting a good watering is given, but no more for a while, relying altogether on syringing overhead, which is done three times a day. The belief is that under this treatment roots are formed quickly, and the pots are well filled with them before much top is made.

After this, when fair tops are formed, the plants are given manure water three times a week, quite weak at first, but stronger as growth gets stronger. They are grown in an ordinary greenhouse, with no fire heat excepting towards fall, when a slight fire is started at night to counteract any harm which might come from the chill air. Free ventilation is given at all times, but in a way that will not cause a draft, and the glass is shaded. Towards the close of September water is gradually withheld to dry off the bulbs. When the tops are dead, showing the bulbs to be ripe, they are taken out of their pots and placed in a sunny, dry place in the greenhouse, to get thoroughly dried, when they are cleaned, and the bulbs placed in pots and covered with dry sand. Boards are placed on the hot water pipes, and the pots of bulbs set on these, to remain there all winter. They get no water from that time until they are repotted in spring. About one hundred and seventy sorts are grown, including the best of the new and old varieties.

Many of the plants shown in the picture were five to six feet across. One, a fine plant of bicolor splendens, was six and a half feet, and a magnificent Mons. Hardy was seven feet.

Mr. Hughes regards the following two dozen sorts as among the best: Alba lutea, Beta, bicolor splendens, Boildieu, candidum, Chantini, Clio, Cannaertii, Duchartii, delicatissimum, Excellent, Emperor of Brazil, Gustav Engelhart, Lindeni, Mons. A. Hardy, Madame Sheaffer, Madame Bleu, Meyerbeer, nobile, Perle de Brazil, Prince Albert Edward, Triomphe de l'Exposition, Wightii, Wm. the Third.

M.

Massachusetts Horticultural Society. Annual Exhibition.

The annual plant and flower exhibition of the Massachusetts Horticultural Society was held on Wednesday and Thursday, September 2 and 3. It was, as most of the exhibitions of this society now are, free to the public, and the halls were crowded continuously.

The upper hall was devoted exclusively to the plants, which were arranged in enormous groups with serpentine walks among them, forming a very pretty effect but necessarily crowded so that the beauties of the gigantic and stately palms, tropical foliaged plants and superb specimen ferns were but poorly displayed. No better argument for a new hall is needed than is presented in a visit to one of these annual shows. Nowhere in America can a grander exhibition of perfect specimen greenhouse plants be gotten together than is possible when the expert gardeners of Boston are so inclined and it is to be regretted that such utterly inadequate facilities are provided.

Nothing finer in groups of foliage plants has been staged here for a long time than the collection shown by J. S. Bailey (Wm. Donald, gardener), and that from John L. Gardner (Wm. Thatcher, gardener) was a close second. A beautiful specimen of Alocasia Sanderiana in Mr. Donald's group was awarded a silver medal for superior culture. In the lesser sized groups and in the palm classes J. H. White (J. H. Wheeler, gardener), Dr. C. G. Weld (K. Finlayson, gardener), John L. Gardner and N. T. Kidder (Wm. Martin, gardener), competed, and rare and beautiful specimens abounded. J. H. White's Eurya latifolia variegata was a stately example of this beautiful plant. A certificate of merit went to Dr. Weld's Heliconia illustris rubricaulis. Other perfect specimens in Dr. Weld's groups were Dracæna Doucetti, Acanthophœnix crinita and Licuala grandis. The judges

FANCY-LEAVED CALADIUMS.

were so entranced with a collection of thirty varieties of crotons from J. E. Rothwell (J. Mutch, gardener) that they voted it a silver medal.

Caladiums were grand. They came principally from N. T. Kidder and Dr. C. G. Weld. Some of the best varieties were La Perle du Brazil, Candidum, Leopold Robarts, Triomphe de l' Exposition, Excellent, Sir Walter Scott, Itique, Reine Marie de Portugal and Princess Alexandra. Harvard Botanic gardens (Robt. Cameron, gardener) contributed a large group of decorative plants in which Martinezia simplex, Geonoma serrata, Kentia McArthurii, Myriocarpa stipitata, Nephrolepis exaltata var. hirsutula and Nephrolepis acuta were conspicuously fine. A collection of Japanese plants and curiosities including dwarfed and contorted ferns, cycads, bamboos, pines, maples, etc., was shown by B. Muto and the odd things attracted much attention from visitors.

Ferns were shown in good variety and form by J. H. White, Dr. Weld, E. S. Converse and John Jeffries, and lycopods by Dr. Weld. A specimen of Nephrolepis exaltata measuring eight to ten feet from tip to tip of the drooping fronds came from C. H. Souther. Begonia Rex from E. S Converse (D. F. Roy, gardener) and Jas. L. Little were very good. The latter showed a set of twelve splendid Rex hybrids, plants averaging three feet across, and a good group also came from W. S. Lincoln. There were fewer orchids shown than usual. A group of ten cypripediums from J. S. Rothwell included the beautiful C. Cornlngii.

Flowering plants were more in evidence than has generally been the case at these annual plant exhibitions and these helped out the crotons and caladiums in supplying the necessary brilliancy where color would otherwise have been badly missed. J. H. White contributed a large number of fuchsias and flowering begonias. Cannas in bloom from John Jeffries, J. L. Little and J. W. Howard filled a long-felt want. Two specimens of Begonia Haageana with massive pendent clusters of flowers from Jas. L. Little (Geo. P. Green, gardener) were among the finest things shown and there was an unusually well-grown pyramidal Clerodendron Balfourii from N. T. Kidder. Mr. Kidder also showed Cuironia exigua with an abundance of pretty pink blossoms, and C. H. Souther had a fine specimen of Anthurium Brownii.

The prizes of $25 and $20 were apparently not regarded as an inducement equal to the S. A. F. medal which brought out such fine displays at Providence, for there were no entries in this class.

In the cut flower department which was confined to the lower hall and corridors there was a bewildering sea of color. There were nasturtiums, marigolds, zinnias and other garden favorites in profusion and dahlias fairly overwhelmed everything else. There were dahlias enough if well displayed to fill the lower hall. Good judges pronounced the dahlia show to be the best ever given in this country. There were show, fancy, cactus, liliputians and singles in endless variety and the popular interest in the dahlia was very evident. On general display filling one hundred or more bottles the prizes were awarded respectively to H. F. Burt, W. C. Winter and Lothrop & Higgins. John Endicott & Co., L. W. Snow and John Parker divided with the above exhibitors the premiums on the special classes and large quantities were staged by W. W. Rawson. There was considerable confusion as to classification and quite a number of disqualifications for informality were noted in consequence. The reviving importance of the dahlia as an exhibition flower makes it imperative that a standard classification be adopted and well understood hereafter.

The aquatic plants, of which there were large tanks from Oakes Ames and L. W. Goodell, were as usual greatly admired. H. A. Dreer showed Nymphæa Doogueana and Nymphæa Gurneyana, two new seedlings, the former white with a soft pink flush, the latter deep red.

Interesting individual exhibits were gladiolus "White Lady" from H. A. Dreer, improved Drummond phlox and verbenas from L. W. Goodell, zonal geraniums from George Hollis, seedling coleuses from C. A. Perkins, Nymphæa Devoniensis from W. B. Shaw, dahlia "Seraph" from Edwin Davenport and seedling canna "Sen. Geo. Peabody Wetmore" from Robert Christie.

There was a large display of foreign grapes contributed by Miss E. J. Clark, J. H. White, E. S. Converse and W. C. Winter.

C. H. Allen of Floral Park, N. Y., and W. F. Dreer of Philadelphia were among the visitors.

Aquatic Flowers at Providence.

In the beautiful collection of aquatic flowers exhibited by Carl Blomberg, gardener to Oakes Ames, which won the silver medal of the Society of American Florists at Providence, the following hardy nymphæas were included. N. odorata and its varieties minor, sulphurea, Carolinieuses and rosea; N. Marliacea albida, N. M. Robinsonii, N. M. lucida, N. M. tulva, N. M. rosea, N. M. chromatella, N. M. purpurata and N. M. fulgens; N. Laydekeri rosea and Nelumbium speciosum.

Tender kinds shown were N. zanzibarensis, N. z. rosea, N. stellata, N. stellata Eastoniensis, N. zanzibarensis Mme. Anna C. Ames and N. scutifolia. Other aquatic plants of which specimens were included were Limnanthemum lacunosum, Pontederia crassipes major, Sparganium simplex, Rhyncospora alba, R. glomerata, Sagittaria variabilis, Juncus effusus, Myriphyllum proserpinacoides, Scirpus eriophorum, S. lacustris, Acorus Japonicus variegatus, Cyperus alterniifolius, C. strictus (pungens), C. Papyrus (Papyrus antiquorum) and C. strigosus.

Petunia Mrs. F. Sander.

This is undoubtedly the most beautiful of all the double petunias introduced, of a most charming pink color which is enhanced under artificial light. The large globular blossoms are produced with the utmost freedom and are beautifully frilled.

Its durability is remarkable for a petunia and the odor is very agreeable. Although the mass of petals is so thick the flower tube never splits and a plant in flower makes a charming object. It has created much interest at all the prominent exhibitions and has received a number of awards. A. DIMMOCK.

New York.

TRADE CONDITIONS —CARNATIONS SELLING BETTER —VIOLETS COMING IN ALREADY. —DINNER OF THE N Y. GARDENERS' SOCIETY.—A GOLD WATCH FOR WM. WINCOTT —JOHN WEIR RETURNS TO WORK —CLUB MEETING NEXT MONDAY EVENING —LOCAL ITEMS.

Trade during the past week has not kept pace with the rapidly increasing quantity of flowers being sent in to the market. The bulk of the roses received is cut from young stock and is, as a rule, small sized. American Beauty sells rather better than it did last week but it is only the longest stemmed ones with good blooms that bring anything like a steady price. Roses of standard varieties in small and ordinary grades bring from $7.50 to $10 per thousand, a little fancy stock going for $3 and $4.

Carnations sell better and are really the only flowers enjoying any sort of a regular market the supply of desirable blooms being limited. Asters are less plentiful than at last report, but still over plenty for the demand. The violet outlook for the winter is very good, although most of the growers in Poughkeepsie and vicinity planted later than usual. Still the stock in general looks well and many will begin to ship regularly by September 15. Sample small bunches can be seen in market occasionally even at this early date.

The retailers are not yet finished with renovating their stores and consequently there is no attempt at carrying any more stock than is necessary to fill their orders.

The annual dinner of the New York Gardeners' Society will take place at the Grand Central Palace on Saturday evening, September 11. A good time is promised and it is expected that there will be also a fine exhibition.

On last Saturday evening Mr. Wm. Wincott, foreman at Mr. Sutton's West Islip greenhouses, was surprised by a party of his friends who presented him with a very handsome gold watch, Mr. Sutton making the presentation speech.

John Weir has just returned from his vacation looking well and hearty and says that he is prepared now to do battle with the commission men another season. His appearance bears out the statement.

Messrs. C. F. Babret and G. Babret, of Poughkeepsie, will arrive home on the St. Paul on Friday of this week. Mr. Fleischman is expected by the 15th. Mr. Thorley will not return before October 1.

A large attendance is looked for at the club meeting on Monday next, September 13, as some one will probably be present to speak of the trip to the S. A. F. convention at Providence.

The outing of the John J. Foley Association took place last Sunday at Queens, L. I., and is said to have been a brilliant success.

Rob't M. Grey, recently of Minneapolis, has taken the position of foreman at the establishment of Julius Roehrs at Rutherford.

W. J. Knight, of Newark, N. J., has been appointed receiver for the F. E. McAllister Company.

Boston.

WHAT IS GOING ON IN THE HORTICULTURAL SOCIETY —MR M. H. NORTON ENTERTAINS AT HIS SUMMER COTTAGE. — JACKSON DAWSON RETURNS FROM EUROPE —C. J. DAWSON GOES INTO THE PARK DEPARTMENT.—DEATH OF G. W. MARSHALL'S CHILD.

Outside of the annual plant and flower exhibition which is described in another column the past week has been barren of sensation or special incident in this vicinity. The annual exhibition brought to a close the series of weekly exhibitions at Horticultural Hall and the annual show of fruit and vegetables is the only notable event intervening between the present time and the chrysanthemum show, which will undoubtedly equal any of its predecessors in interest and value. The regular nomination ticket for officers and committees of the Horticultural Society was presented at the monthly meeting on Saturday, September 4, and there being only a few minor changes from the ticket of last year the acceptance of the list at the polls is a foregone conclusion. The garden committee has had a busy time visiting places in competition for the various prizes which it controls and several more trips are in prospect. The vegetable gardens of Sumner Coolidge at East Watertown were visited on August 31 and a trip to Taunton is scheduled for Thursday of the present week.

Mr. M. H. Norton invited a few of his friends to visit him on Labor Day at his summer cottage at Hough's Neck. It would take a big house to hold all Mr. Norton's friends and the list was necessarily limited to the size of the cottage. The fortunate ones were treated to one of the pleasantest events in the long series of reunions which have grown to be so essential as factors in the social existence of floricultural Boston. About twenty-five gentlemen responded to the invitation, among them being the veterans John Galvin and Fred. L. Harris, the "Boston twins," Warren Ewell and Fred. Mathieson, Superintendent Pettigrew of the Park Department, "Little Woodie," E. M. Wood, Alex Montgomery, James Comley from Lexington and Jos. Fuller from Leominster.

The day was all that could be desired, a perfect September day. The elm-shaded streets of old Quincy town never looked prettier and the blue waters of the bay, dotted with islands and as smooth as a mirror, presented a picture long to be remembered. The cottage is close to the water's edge and several of the visitors could not resist the temptation to take a swim. It cannot be truthfully said, however, that these gentlemen in their striped bathing suits added materially to the beauty of the scene.

The dinner was under the immediate supervision of Mrs. Norton, who with the other members of her numerous household won the everlasting gratitude of about as hungry a party as ever built up an appetite on sea air. In the indispensable after-dinner speeches this was the theme for every one, and had the big-hearted ex-president of the S. A. F. not been already a reigning favorite, his popularity would have been fixed forever by that dinner.

Jackson Dawson returned from his European trip on the Catalonia, Monday, 6th inst. He saw many interesting places on his journeys and met many friends and gentlemen of horticultural fame who treated him with great kindness, but he failed to find a collection of hardy treee and shrubs equal to that in his own Arnold Arboretum, and, notwithstanding his many interesting experiences, returns convinced more than ever that his home is in the most favored land under the sun.

Chas. J. Dawson, who has had charge of the greenhouses at the Bussey Institution for some years, has accepted a position in charge of a portion of the planting department in the public parks under Mr. Pettigrew, a place for which he is eminently fitted.

Robert P., the little son of George W. Marshall, of Everett, died on Saturday, August 21.

Rochester, N. Y.

BUSINESS CONTINUES TO IMPROVE —NO SCARCITY OF STOCK EXCEPT ROSES — FINE ASTERS —EARLY COSMOS.—HARDY FLOWERS —THE FLORISTS' PICNIC.

Business conditions continue with the same encouraging upward tendency. There is no scarcity of flowers, however, though on some occasions during the week past roses were short in supply and everything in the shape of a rose, good or bad, was eagerly taken up. There is a very good demand for outdoor stuff but it has to be of A1 quality; the poorer grades are not wanted.

Large long stemmed asters never sold as well as they do this year, but they are beauties, better in fact than we have ever seen them before, 5 to 6 inches across on an average and as perfect in shape as a chrysanthemum. They are Semple's varieties and Vick's branched. The season was especially favorable for their growth and we hear very little of disease in this locality. Cosmos Early Dawn has been in the market for more than a month and takes surprisingly well. In our climate we can not grow the ordinary late varieties profitably because frost is almost

PETUNIA MRS. F. SANDER.

sure to destroy them just as they begin to flower, while Early Dawn begins in July and holds out until frost. Of the helianthus, the semi-double lætiflorus takes the lead in the market; it is smaller and more graceful than any of the multiflorus type and has a long slender stem. Rudbeckia Golden Glow also meets with ready sale, but the flowers must not be cut before they are fully out; half matured they show a greenish center which spoils their looks. Stems of gladiolus and tuberoses do not sell near as well as in former seasons, the market is over flooded with them.

Next Friday all our florists will close their stores promptly at noon and take a half holiday to attend the annual picnic of the florists. Extensive preparations are going on now under the management of our commission man, J. W. Keller, and there is no doubt that the affair will be an immense success. All sorts of athletic games, shooting, pitching quoits, running races of fat and lean florists, jumping, etc., will be on the program among other good things. Several guests from out of town are expected to be present. Oakwood, the celebrated and at the same time secluded and fashionable summer resort near here, is the place selected for the grand occasion. It is strictly a temperance place, for no liquor of any kind is exposed there for sale, but J. W. has amply prepared for emergencies; doctor's certificates for all participants are in readiness to be presented at the new drug store which was temporarily erected in the beautiful glen. Oakwoods soil is not fertile enough for electric light plants, so at night fall the congregation will have to adjourn to the nearest bowling alleys in the town of Brighton, where electric lights are abundant and the "Red lanterns" so well known here as well as in some parts of New York and Brooklyn, are furnished on shortest notice. K.

Fire Insurance.

TO THE FLORISTS OF AMERICA: At the Providence convention of the Society of American Florists the undersigned committee was appointed to ascertain whether or not the trade really desires a mutual fire insurance association, and if so to proceed with the formation of a permanent organization. We want to accomplish this work quickly and respectfully request a response at once, stating what amount of insurance you would take providing a satisfactory organization were effected.

You will find the committee's report in the trade papers reporting the proceedings of the convention. Should you care to make any suggestions they will be thankfully received and cheerfully considered. All questions will be gladly answered by any member of the committee. When you state the amount of insurance you would take please also state when present insurance, if you carry any, will explre.

The members of the present committee have for five years given the matter careful attention, and after weighing every objectionable feature carefully, are now convinced that the scheme of a mutual fire insurance among the florists is practicable. There are skeptics on the subject. The hail association had the same trouble, and all know how it has triumphed.

Kindly address at once the member of the below named committee who is nearest you, and state how much insurance you would carry should a satisfactory organization be effected. Do not delay. Give us the encouragement of your support. We need you; you need the insurance which we are satisfied we can give you for less than fifty per cent of present underwriters' rates. Write to one of us immediately.

Respectfully: E. H. Michel, 1620 Olive street, St. Louis, Mo.; J. G. Esler, Saddle River, N. J.; E. A. Seidewitz, Annapolis, Md.; W. J. Vesey, Fort Wayne, Ind.; M. A. Patten, Tewksbury, Mass.

[The above announcement of the committee on fire insurance should receive prompt response from all in the trade. If you want protection against fire at reasonable rates now is the time to make your wishes known. The committee have been to a good deal of trouble to formulate a practical plan for providing satisfactory mutual insurance against fire, and it now rests with the trade whether it shall have such protection at mutual rates.—ED.]

Toronto.

THE EXHIBITION.—FINE DISPLAY.—UNSUITABLE BUILDING.—LABELLING.—LEADING AWARDS.—VISITORS.

In the miserable, dark, dingy old shed they call a "Horticultural Hall" up at the Exhibition is to be found a first-rate show of plants this year, which with proper space and a decent place to show them off would make as good a display as could be seen in the country. But situated and placed as they are very few of the best specimens show off their chief points of beauty nor, as far as I can see, can they be made to do so in such an unsuitable building. In these days of horticultural enlightenment one expects something better from a big affair like the Industrial Exhibition of Toronto, and with two flourishing societies like the Gardeners' and Florists' and the Horticultural in the city something better should be insisted on.

And now I am finding fault, there is another thing I think should be remedied. Hardly a plant in the whole show was labelled, although one of the regulations says "All articles to be correctly named and properly labelled." But the rule has not been strictly enforced I believe for years, if it ever was, and so exhibitors have become careless. Now I do think that it is very important that, in a show like this especially, the names should be on every plant separately exhibited (of course one could hardly expect it on a decorated table). During the second week of the fair the hall is crowded every day all day long. Do the people know any more when they go out than when they come in? Can they learn anything as matters are at present? Let it be understood next year that the judge will enforce the rule in future and the complaint will not have to be made again.

There were four entries in the section calling for 75 distinct stove and greenhouse plants, and, needless to say, there were some magnificent specimens shown. Exhibition Park (John Chambers), Central Prison (W. Houston), Horticultural Gardens (A. Watkins) and Reservoir Park (G. Reeves) were the exhibitors and the prizes were awarded in the order given. For the most tastefully arranged table of plants 16x19 feet there were three entries, Manton Bros., The Asylum (J. Graham) and Grainger Bros., all very good. The first named was a very pretty table with a great variety of both flowering and foliage plants. Orchids were rather poor. Palms very good in all entries, Mr. F. G. Foster, the judge, saying they were the best lot he had ever

seen here. Ferns were also very good, especially the 12s shown by the Central Prison and Exhibition Park; the Neottopteris nidus avis among the former and Davallia Mooreana in the latter were worthy of special mention.

Flowering plants, stove and greenhouse, were a great improvement on former years and made a really fine show. Manton Bros. took first prize for tuberous begonias with 12 very healthy well grown plants. The first prize for hanging baskets was as usual taken by Mr. J. Graham, of the Asylum, with two beauties that would cover the side of a house, nearly. The Central Prison took first for fancy caladiums with a fine lot of varieties, new to these parts. A great source of interest was a large plant of Cycas revoluta in flower, grown by Mr. Rob't Gore, gardener to Sir Casimir Gzowski. Cut flowers come in next Tuesday.

The flower beds in the Exhibition Park are looking very attractive and gay just now, and, thanks to the weather, the grass is beautifully green. The gardens of the Mercer Reformatory, which is passed en route to the Exhibition, are also looking exceedingly pretty now and attract lots of attention.

Mr. Geo. Vair has bought the old greenhouses at Chestnut Park, the estate of the late Sir D. L. Macpherson, where he was gardener and steward for many years. Mr. Vair helped to build these greenhouses over 40 years ago. He has already disposed of all the piping, put in by Hitchings & Co., and I believe most of the glass. Everything was of the very best quality.

Visitors to the fair: Mr. T. Meehan, of Philadelphia; Mr. M. A. Wilhelmy, of Cleveland; Mr. F. G. Foster, of Hamilton; Mr. Lovell, of Galt; and many others whose names I was unable to procure. If the weather keeps fine the attendance at the exhibition promises to beat the record. E.

Philadelphia.

SIGNS OF IMPROVEMENT. — PLENTY OF FLOWERS.—WANAMAKER OPENS PLANT TRADE.—MEETING OF FLORISTS' CLUB — NOMINATION OF OFFICERS —REVIEW OF PROVIDENCE CONVENTION —THANKS TO PROVIDENCE AND NEWPORT CLUBS —A FINANCIAL QUESTION FOR NEXT MEETING.

There are signs of improvement, slight to be sure, but like the "cat's paw" on the water which precedes the steady breeze, they are, it is to be hoped, the forerunners of the wind that will fill the now flopping sails and send the barques of trade along at full speed.

There are plenty of flowers and the first quality stock is quite good enough for the prices realised. The average roses, however, had better be disbudded for a while and get up into the higher class later on. Beauties can now be had with 20 to 24 inch stems and good quality flowers; $1.50 per dozen is about the price for the best. Teas, first selection, bring $3 to $4 per hundred, with a few fancies at $5. Carnations from outside, fair flowers but short stems, bring 50 to 75 cents per hundred. Asters are still plentiful, of good quality but lower in price; 50 cents per hundred is now asked for the best. Gladiolus go slowly at $2 per hundred spikes. Shoenbrun violets $2 per hundred bunches.

The fakirs are busy these days working their way among the crowds in the shopping districts; 5 to 10 cents per dozen for fair teas is their price with quite nice Beauties at six for a quarter.

While there is scarcely any movement in palms, ferns, and foliage plants for the house among the store men as yet, the Wanamaker plant department has started the ball rolling and appears to be handling quite a few; ferns and ferneries were their specialties the past week.

The chrysanthemums seem to be doing well with most all the growers there being very little disease apparent as yet. There will likely be enough around to supply all reasonable demands and leave a few over for the fakirs.

The September meeting of the Florists' Club was held last Tuesday evening, and was opened to a fair attendance It was the evening for the nomination of officers for the ensuing year and no little breeze was raised as one after another of those proposed declined. It seems that Mr. Burton, who declined a re-election, has made such an efficient officer that all were afraid to succeed him. He certainly has shown the boys how to run a meeting and given some of them such an insight into parliamentary law as they never had before. With the retiring president Secretary Farson also steps out, he insisting on being relieved of the cares of office. The responsibilities of a retail business are enough for any man, and Mr. Farson has only succumbed to the inevitable.

What was accomplished at the convention was the discussion for the evening, opened by Mr. Lonsdale. He thought the papers read were of a very high order, and especially spoke of the paper on the dethorning of the rose. The points thrown out by the essayist were new to him, and he thought that experiments with this end in view should be encouraged. He called on Mr. Craig to express his views. Mr. Craig said that on the whole the convention was a great success. The social part so ably managed by both the Providence and Newport clubs was the best he had ever experienced and reflected great credit on these gentlemen. He thought the convention should be an especially agreeable one to the Phila. clubs, as they had fared so well when the prizes were given out. He had no doubt that a large delegation would go to Omaha and endeavor to bring the Evans trophy to Phila. for good.

The exhibition of commercial plants was the finest he had ever seen at any like display. The exhibit of cocoa fibre was a surprise, as it had always been hard to get, but now was offered at a low rate within the reach of everybody. A new gun for insecticides he considered a very valuable thing. A practical Boston florist, Mr. Nicholson, would not sell his for $100 if he could not get another. By its use he could use lime dust from air slacked lime with such effectiveness as to cure rust on carnations. A pump for tobacco water exhibited he had tried and found it to be a great labor saver. He thought that florists generally did not give these industrial features the attention they should.

Mr. Lonsdale mentioned the seedling rhododendrons exhibited by Mr. McCarthy, of Swan Point Cemetery, and how successful he was with them; also the group of evergreens by the same gentleman. He also spoke of the fine displays of water lilies and the strides these flowers were making, and the tasteful arrangement of the exhibits in these departments.

John Westcott observed many things that took place in connection with the convention and he especially commented on the manner in which the delegates had been entertained from the time they set foot in New York until the convention and all its functions was over. He proposed a vote of thanks to the Providence and Newport Florists' Clubs, also the New York Florists' Club, for the very handsome manner in which the Philadelphia florists had been entertained at their hands. This was passed with a will. Messrs. W. K. Harris, C. D. Ball, Jos. Heacock, D. D. L. Farson and others also took part in the discussion.

The subject for next meeting is "Is dollar wheat likely to help the florist this winter?" Our agricultural looking member, Mr. Wm. K. Harris, is to launch this financial puzzle. Politics are barred, but the Bard of Kingsessing is to be poetic if he so desires. K.

St. Louis.

TRADE CONTINUES TO SLOWLY IMPROVE.—GOOD SUPPLY OF FLOWERS —BUILDING. —BUSINESS CHANGE.—FIRE INSURANCE.—WEBER'S NEW STORE.—BOWLING.

Trade continues to improve though slowly. Some of our florists still complain that trade is quiet. Bright sunshiny days have brought out the blooms in good shape. Meteor, Pres. Carnot, Bride, Maid and Kaiserin are looking fine. Meteor and Carnot a little scarce, others plentiful, including Perle. Price on first-class stock is $3 some extra fine ones $4, seconds $1 to $2. Only a few good Beauties are to be had. The extra quality are very scarce, price $10 and $15 for the best, and for short stems $3 and $5.

Most of the growers have all their carnations housed and they report that all the new varieties are doing splendid and have made good growth. Carnations are improving some and are not so scarce as they were last week. Price for the best is $1 per 100 and some are sold at 50 and 75 cents per 100. Tuberose stalks are very plentiful and are selling at $2 and $4 per 100. Gladioli have been in very little demand and are very plentiful at $2. Asters are not such a glut as they were last week, still a great many are coming in and are sold at 50 cents and $1 per hundred. Smilax is looking better and some good strings can be seen at the commission houses at $10 and $12 50.

J. F. Amman, of Edwardsville, Ill., is building a new rose house 125x20. Mr. Amman sends some fine roses and carnations to this market in season.

Martin Moran, late with Luther Armstrong, has rented the establishment of Wm. Kalish, 4508 Delmar avenue. His place will be known as the West End Floral establishment.

The fire insurance circulars to florists of America have made their appearance among the florists of this city and a great many of them report that they will support the association.

Our visitor last week was Arnold Ringier, with W. W. Barnard & Co., Chicago. Arnold reports business good in his line.

A visit was made to Mr. Fred. Weber's new store last week, and after looking it all over I found it to be the handsomest floral establishment in St. Louis, if not in this country. A fine conservatory on the west side of the store is filled with palms and all kinds of decorative plants and the small one in the rear of the store will be used for blooming plants. The entire store is all inlaid with white glazed tiling, the counters and show window of the same. There is a large ice box and a fine vault in the cellar for cut flowers and floral designs.

The talk among the florists now-a-days is "Have you seen Weber's new store yet?" Take it as a whole Fred Weber

has what you would term an ideal place to buy flowers.

The members of the bowling club had a good time on Monday night. Everybody was on hand except Dr. Helwig, who had to stay at home and look after the new bowler that came to his house last week. Arnold Ringier, of Chicago, was on hand to bowl with the boys. Arnold rolled 518 in three games and made a single high score of 243, and he claims that this is the highest single game he ever rolled. Among the club members in the other games C. Beyer was high man with 608, Weber second with 582, and Kuehn third, 528. Beyer was also high on single score, 237; Weber second, 220; and Kunz third, 215. Every member should be on hand Monday night as we are going to celebrate with Doc. Helwig on his new bowler. Congratulations are now in order. J. J. B.

Chicago.

HOT WEATHER DEMORALIZES MARKET — SUPPLY ABUNDANT.—PRICES LOW.—CLUB OUTING TO DAY.—VARIOUS LOCAL ITEMS.

Continued hot and dry weather for the past few days has had a demoralizing effect on the market. There are roses in abundance, more remain in the ice box than are disposed of at even the low prices at which they are quoted. From $1 to $3 is the quotation, but a great deal of fair stock is disposed of at considerably less than the former figure, while very few roses indeed bring as high as $3, with the possible exception of very choice Kaiserins and Carnots. The latter seems to be meeting with considerable favor in this market.

Carnations have taken a decided drop and it is practically impossible to quote a price on them. The best sell at from 40 to 75 cents, though many are sold for much less.

The Florists' Club's excursion to Vaughan's greenhouses at Western Springs takes place this Saturday afternoon (11th). Train leaves Union Station at 1:30 p. m. Returning the train leaves Western Springs at 5:04, reaching Chicago at 5:40 p. m. This will probably be the last outing of the season and a large attendance is expected.

Kennicott Bros. Co. are receiving some fine gladioli from the Cushman Gladiolus Co., Euclid, O. Mr. Cushman's variety "May," a beautiful light pink, sells most readily and is certainly an excellent flower. Mr. F. Kennicott has been laid up with rheumatism, but is again able to attend to business. Mr. G. H. Pieser will leave the city for a two weeks' vacation next Monday.

Mr. O. P. Bassett has returned from a week's stay at Delavan Lake.

A party giving the name Chris. or Geo. Nelson has been using the name of Supt. Jensen, of Humboldt Park, in introducing himself to various florists, and after his visit various articles, such as watches and bicycles, have been missed. Mr. Jensen has received many complaints and is naturally much annoyed at the use of his name by the party, who is about 5 feet, 10 inches tall, has red hair and dresses well.

The Illinois Cut Flower Co. are receiving some extra fine asters from W. N. Rudd, which sell readily, none in fact remaining unsold.

Hydrangea paniculata was seen in good form at several of the dealers. This finds a fair sale at $6.

Mrs. E. Huntington, of Bassett & Washburn's has changed her name to Mrs. W. Horton. Congratulations are now in order.

San Francisco.

TRADE A LITTLE BETTER —PLENTY OF FLOWERS —ROSES FROM NEW PLANTINGS COMING IN —NEW ASTERS —THE FIRST CHRYSANTHEMUMS —STATE FLORAL SOCIETY DECIDES TO HOLD ANNUAL CHRYSANTHEMUM SHOW.—VARIOUS ITEMS.

Trade has been a little better than usual during the past week and flowers of all kinds have sold fairly well. Roses of the new plantings are beginning to come in and as a general rule the quality is very good. Of course they are not bringing good prices as yet. Beauties are fairly good but the demand is rather slim at present for them.

Asters are beginning to give out with most of the growers and the quality is not very good. Several new shades of Semple's asters have made their appearance this summer and sold very well particularly a new purple which is very popular. Several new shades of red were also brought into the market in limited quantity and proved good sellers on account of the large size of the bloom and the length of the stems. In carnations we have an abundance and large quantities are disposed of daily at rather poor prices. M. Lynch was the first grower in the market with chrysanthemums. He is bringing in some very fine Whilldins and Mme. Cassogneau. From present indications the chrysanthemums are going to be much earlier this season than heretofore on account of the dry spring and summer.

We also note some Marie Louise violets making their appearance in very limited lots. As yet the flowers are rather small. Liliums rubrum and album have been much sought after during the past few weeks and large quantities have been used. As there is such a large quantity coming in daily they are not bringing much. Sweet peas are yet to be seen and somehow have improved much in color during the past few weeks. The supply is small and prices the same.

Mr. Chas. Mitton has left the nurseries at Menlo Park and is now engaged in business in this city.

Mr. E. Magnus has opened a flower store at 814 Larkin street between O'Farrell and Geary streets.

The California State Floral Society has decided to hold a chrysanthemum show this fall but as yet have not decided as to where it will be held. The show this year will be free to all and no admittance fee will be charged. The show will probably last one day only and certificates of merit will be given to the successful exhibitors instead of cash prizes as formerly.

The Redwood City Floral Society have not yet decided the date on which their fall show is to be given but will do so at their next meeting.

A movement is on foot to have another floral carnival in San Jose, similar to the one held in the spring of 1896. It is to be hoped that they will succeed in maturing their plans for the same as the one held there in 1896 was a very successful affair.

METEOR.

Pittsburg.

BUSINESS STILL IMPROVES.—BRIGHT OUTLOOK.—A HANDSOME PIECE OF FUNERAL WORK.—VARIOUS ITEMS.

The slight improvement in business noted last week is more pronounced this week, and with the prospect very bright for the settlement of labor troubles, especially the coal miners' strike this week, and consequent resumption of manufactories affected by it, there is a feeling that a revival of business is certain this fall and winter. Prices remain at a low figure and there are plenty of good flowers on the market.

Mr. Gus Ludwig reports business fair. He had one piece of funeral work this week that necessitated some hustling on his part to get enough asters, one color only being used, to fill the order in proper time. It consisted of a curtain or lining for the grave, made of dark purple asters with a border of ivy leaves. It covered the entire inside of the grave and was very handsome.

Mr. M. I. O'Brien's (Sharon, Pa.,) daughter was married the early part of this week.

Mr. Bunyand, representing Pitcher & Manda, was a visitor this week.

The Florists' Club will hold a meeting on the evening of the 9th. A very interesting time is expected with a full account of their trip to Providence.

Wm. Loew has returned from the convention well satisfied with it and will in all probability be on hand at Omaha next year. REGIA.

Heating.

How shall I pipe my greenhouse, 14x44, carrying the hot water from a boiler in the basement of a cottage 20 feet away? The ridge is 9 feet from the ground. I wish to put the heating pipes under the side benches only, using 1½ or 2-inch wrought iron pipe. What size of pipe should I use to carry the water (under ground) from boiler to greenhouse? How many pipes should I have under each bench? What size? What size of pipe to carry water back to boiler? Lowest temperature to be 50° in a Chicago winter.

H. F. R.

For the flow and return pipes running from the cottage to the greenhouse (20 feet) he certainly should use not less than 4-inch pipes, inside measure. These should be enclosed in a hollow chamber of some kind. The cheapest way to make it would be with 2-inch plank made in the form of a long box about 10 inches deep and 14 inches wide, inside measure. Nail the two sides and bottom securely, fit it in the trench prepared for it, then lay the pipes in it with a good fall to the boiler, make the joints absolutely tight, then nail the cover on the box securely. Cover the same with tar paper tacked down close to the wood, next give the whole a good coat of hot tar, sprinkle some dry sand on it as fast as the tar is put on, and when the whole is quite cool and hard cover with earth, pack firmly, and you will have a dry chamber that will last for years if not disturbed.

Where the main flow and returns enter the greenhouse branches must be provided for smaller pipes to be connected. For his house (14 feet wide and 9 feet to ridge) he would require eight 2-inch pipes, which can be made in two flows and two returns for each side, or they can be carried all round the house, starting on the coldest side and returning on the other side. This practically makes all the pipes flows till they reach the return to the main above mentioned. If 1½-inch pipe are preferred then would advise using twelve of these, arranged either way as suggested, but if they are to be made to act as flow pipes all round the house then I would advise that they be given a gradual rise all the way round to where they are to be connected again with the one large main return, and at this point there should be some provision made for expansion of the water such as a small iron tank or something similar. This, of

course is best left open at top to allow for air to escape.

If it is decided to make flows and returns on each side of the house the pipes should go around the corner at the farthest end from boiler to as near the door as practicable and each set of pipes should be furnished here with an expansion tank of some kind.

JOHN N. MAY.

BROOKLYN, N. Y.—Mr. A. L. Miller, who for many years has been a valuable assistant in the nurseries and conservatories of his father, Mr. Henry Miller, has succeded that gentleman in the business, the elder Mr. Miller retiring to enjoy the competency he has acquired through years of industry and economy.

SITUATIONS, WANTS, FOR SALE.

Government Seed Distribution.

From the *Minneapolis Tribune* of Sept. 5.

The following paper on "The Government Seed Shop" was read before the Farmers' National Congress in St. Paul last week by J. E. Northrup, of this city. In it he attempts to show to what extent the system of free distribution of seeds has deteriorated.

Two hundred years ago a brig from the coast of Madagascar was driven by stress of weather into the harbor of Charleston, S. C. Her captain, while there formed the acquaintance of Landgrave Smith, and presented him with a bag of rice. This the landgrave caused to be planted in his garden in the city of Charleston.

"From this arose one of the great staple crops of the south, which soon amounted in value to millions of dollars. Stimulated, doubtless, by such example conscious of the splendid opportunities which the country at that time offered for such an enterprise, in its vast and unknown range of soil and climate, and inspired with a patriotic desire to promote the welfare of his countrymen, Henry L. Ellsworth, the first commissioner of patents, conceived the idea of distributing new and rare seeds among the farmers of the United States.

"This, he did at his own expense from 1836 to 1859, when he asked and secured from congress an appropriation of $1,000 for the purpose of "collecting and distributing rare and improved varieties of seeds and prosecuting agricultural investigations, and procuring agricultural statistics."

From this small beginning founded in patriotism, has arisen the government seed shop at Washington, the colossal humbug of the day. During the earlier years, the sums appropriated by congress for this purpose seem to have been wisely expended.

"The reports of the patent commissioners for succeeding years showed the importance that was attached to the procurement of seeds, that had proven of commercial value in other countries, and that were not known in the United States.

In distributing these seeds, great care was exercised that they should be placed only in the hands of experienced agriculturists, who would give them intelligent attention, and in due time report fully as to their merits or demerits.

WANTED RARE SEEDS.

The patent commissioner's report to congress showed in detail the varieties that had been purchased, the countries from which they were obtained, the points of excellence for which they were selected and the success or failure which attended their planting.

These reports teem with expressions showing the keen interest with which these experiments were regarded. Charles Mason, commissioner of patents in 1857, says in his report to congress for that year: "A prime object has been the introduction and naturalization of new and useful products, hitherto unknown in the United States. These have been placed in the hands of persons most likely to try the experiment fully and fairly. If, out of the whole number tried, a single one shall prove as eminently successful and useful as the potato or rice plant, the trouble and expense attendant upon all these experiments will be richly compensated. The advantage resulting from the acquisition of a new commodity is of more value to the country than the acquisition of a new province."

It was in this spirit that the authorities in charge, the public generally and congress itself then participated in this work. In 1862 the department of agriculture was established, and the first section of that act shows the importance with which this seed distribution was regarded.

Be it enacted by the Senate and House of Representatives of the United States, in congress assembled, that there be established at the seat of government of the United States, a department of agriculture, the general designs and duties of which shall be to acquire and diffuse among the people of the United States useful information on subjects connected with agriculture, in the most general and comprehensive sense of the word, and to procure, propagate and distribute among the people new and valuable seeds and plants.

It was not long, however, before abuses crept into the distribution of seeds, for in 1868 Horace Capron, in that year appointed commissioner of agriculture, in a special report to congress says:

"The seed establishment has practically grown into a sort of fungus of little value in itself, and which needs to be removed in order to give vitality to the system." Further in his report he says: "Seeds distributed under the law must be new and valuable; new, in the sense that they must be of a kind that has not been in use in the district to which they are sent; valuable, in that they possess some important quality above those of similar variety in ordinary use. In fact, some peculiar property which renders them worthy of being a gift from the nation to a neighborhood."

Following this high conception of the act which brought his department into being, Commissioner Capron, in 1869, distributed something less than one-third the number of packets of seed that had been sent out the previous year by his predecessor in office, this distribution consisting chiefly of varieties and plants not then cultivated in this country. It included seeds of cereals, grasses, hemp, jute, ramie, opium poppy, sugar beet, sorghum, forest and shade trees and many of the rarer varieties of plants, edible, medicinal and fibrous. But this standard was not long maintained. Through the carelessness, incompetence or venality of officials in charge the department soon became the dumping ground for the commonest sorts. Congressmen found that a packet of seeds sent under a "frank" was a cheap and easy way to tickle the vanity of a rural constituent, and it mattered not much whether he was a farmer or a sailor.

Efforts have been made from time to time by various administrations to stem this tide of paternalism, and to divert the flood into its original channel, but it has become an uncontrollable current.

In his report for 1878 Gen. Le Duc, on assuming the duties of commissioner of agriculture, said:

"I found that the distribution of seeds had grown into an evil of serious magnitude, in that it included the commonest kinds in use, and which could be bought in almost any seed store, not to say corner grocery.

REPORTS NOT AVAILABLE.

In urging that all distribution of seeds be made direct by the department and not by the congressmen, he said: "That of the thousands and thousands of dollars worth of seed that have passed through the hands of members of congress, it is safe to say that not a dozen reports have ever been made that have been available by the department as data."

Notwithstanding the strong language of this report, congress in the following year passed an act that: "Three-fourths of all the seeds, plants and cuttings purchased by the department should be supplied to senators, representatives and delegates in congress, for distribution among their constituents."

The effects of this decree were that farmers in North Dakota received their full quota of cotton seed, while those in Alabama and Texas found spring wheat in their prize packages.

This unique and statesmanlike method of distribution had but one redeeming feature, however, for under it many farmers had an opportunity of inspecting seeds they had never seen before, while in previous distribution they had been presentd with varieties with which they had been intimately familiar since their boyhood days upon the farm.

Secretary Morton, in his report for 1894, states: "The extravagance and inutility of these distributions are apparent to any person who will investigate the results of the expenditures.

"That the distribution is regarded with little interest is evidenced by the fact that out of nine million papers of seeds distributed among one million, eight hundred thousand citizens of the United States only nine hundred and forty acknowledged their receipt."

Several vigorous efforts have been made to put a stop to this wasteful and demoralizing use of the public funds which has already consumed nearly three and one-half millions of dollars. The character of the present secretary of agriculture is a sufficient guarantee that he will exert his full influence toward confining the distribution within proper lines, but the head of the department is practically powerless in the matter, for under the present act it is mandatory upon him to purchase the greatest quantity of seeds possible to obtain for the sum appropriated, and to set aside three-fourths of the packets for the use of senators and congressmen.

It is really doubtful if congressmen themselves want these seeds. They are to them a source of endless annoyance, trivial correspondence and petty jealousies, but if they have any seeds at all they must have a good many, for if a member of congress sends seeds to John Doe and fails to send any to Richard Roe he has made an enemy of Richard. In fact, to keep peace in his bailiwick he must send a collection of seeds to each voter of his own political faith in the district.

The question then is, by what means shall this "Old man of the sea" be thrown from our shoulders, and the answer is, by the farmers of America, the only force which can accomplish it. Believing that this body of representative farmers, convened here from all parts of the United States, will rise as one man in the effort to crush this monstrous evil, I have prepared the following resolutions, which I now beg leave to offer for your consideration:

OFFERED RESOLUTIONS

Whereas, Believing the free distribution of seeds, as at present conducted by the United States department of agriculture, is an unlawful and unwarranted departure from the terms of the act under which that department was created, and

Whereas, The distribution of common varieties can in no wise advance the cause of agriculture, and

Whereas, The useful and beneficent purpose for which the early appropriations for the governmental purchase and distribution of seeds is lost sight of in practice, and

Whereas, The necessities of these appropriations no longer exist, as the work is being carried

on by the experiment stations of the various states who are best acquainted with the needs and resources of their respective localities. and

Whereas, The farmers of America are not mendicants, their favor is not to be gained, nor their votes to be influenced by a package of seeds and

Whereas, It is an insult to their intelligence and unjustifiable perversion of the law, a gross misuse of public funds, and a base prostitution of a noble department, which was created to elevate and instruct, not to pauperize and degrade, and

Whereas, It is an unjust discrimination against many merchants throughout the country, engaged in the selling of seeds, who cannot compete against a "Gift Enterprise" carried on by the United States government, and who, at the present time, are being taxed to pay for the knife which is cutting their throats, and

Therefore be it Resolved, by the Farmers' National Congress of America, in convention assembled, That we earnestly request the President of the United States, our senators, representatives and delegates in congress, the press of America, and our fellow citizens all over the land, to unite with us, in an effort to suppress and extinguish this great and growing evil.

Second, to this laudable end we pledge our joint and individual efforts.

Third, that the secretary of this congress be directed to forward a copy of these resolutions to the President of the United States, to each senator, representative and delegate in congress and to procure for it as wide a publication as possible in the press.

SUNFLOWER seed is likely to be one of the scarce items this year.

IT IS REPORTED that the Cook bill, regulating sale of seeds, has become a law in Maine.

VISITED CHICAGO.—F. T. Emerson, W. B. Hayt, S Y. Haines, Howard Earle, S. B. Dicks, R. H. Shumway, H. M. Claire.

AMONG THE scarce peas this season are Pride of the Market, Admiral, Duke of Albany and possibly Telephone.

ENGLISH HOUSES report turnip seed at three-fifths of a crop; rutabaga, beet, mangel, carrot, parsley and parsnip full crops with some surplus.

IN THE FINAL REPORT of the Alfred J. Brown Seed Co. of Grand Rapids, Mich., it appears that the property of that company has been sold at a chattel mortgage sale, the proceeds of which have been used to pay in part certain mortgage debts owing by that company and no balance was left to pay the general creditors anything.

HARRISBURG, PA.—The firm of Holmes & MacKubbin, seedsmen, has dissolved partnership, Mr. Harry L. Holmes, senior member of the concern, having purchased the business. He will conduct it at the old place. Mr. Charles H. MacKubbin has returned to Philadelphia.

GOOD FLOWERS SCARCE — PRICES SOMEWHAT FIRMER, BUT STILL LOW.—GROWERS HOUSING CARNATIONS.—PERSONAL ITEMS.

The weather continues warm and mostly all of our growers are busy lifting carnations at present. First-class flowers are now scarce; there is plenty of second-class stock around, but the stores have had difficulty to secure sufficient good stock this week. Prices have been somewhat firmer, but remain rather low. The magnificent new school building on Edgewood avenue, South Cumminsville, named in honor of the late President James A. Garfield, was dedicated with great pomp and parade last Saturday. Mr. Fred Walz had the floral decorations for the occasion, a 14-foot eagle fastened over the hallway, and made solely of immortelles it is said, was much admired.

The members of the National League of Commission merchants in this city will have as their guests during Wednesday, Thursday and Friday a delegation of 150 berry growers of Chattanooga. They will receive a cordial welcome and be shown all the sights of a growing progressive city.

Mr. Theo. Lamers, of Cleveland, and Mr. John Lodder, Sr., of Hamilton, O., were callers last week. H. SCHWARZ.

NEW BRITAIN, CONN.—Carl Larenzen is about to start a florist store in this city.

MESSRS. Ellwanger & Barry, Rochester, N. Y., have shipped a collection of 125 varieties of pears to be shown at the International Horticultural Exposition at Hamburg the latter part of this month.

MORRIS, ILL.—The Morris Floral Co. have completed their new houses and now have 20,000 square feet of glass. They feel they are now in a position to fill all orders, having been unable to do this in the past. They will have an "opening" September 15, and Mr. Mitting would be glad to receive calls from brother florists at that time.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Dayton, O.

There are unmistakable signs that the Dayton florists are inclined to view things in a brighter aspect, notwithstanding the present stagnation. Enlargement of plants and improvements of various kinds which have been postponed from time to time during the past four years, are now being carried out.

Among these is J. B. Heiss, who has now in course of erection six additional large houses, to be expressly adapted for palms. Every modern improvement known will be introduced.

Mr. G. J. Horlacher's plant, comprising over 15,000 feet of glass, is one of the finest in the state. Mr. Horlacher has recently rebuilt his boiler room and has likewise replaced his old boiler by two new ones, one of which is of 80 and the other one 60 horse power. Concrete floors and walks were introduced throughout the establishment.

A call on Mr. H. H. Ritter was by no means disappointing, in so far as the appearance of the place was concerned. Neatness and order, the clean, healthy and vigorous appearance of the plants made a most favorable impression upon your correspondent. My only disappointment consisted in missing Mr. Ritter, who, accompanied by his venerable father, had left about an hour previous for Providence.

Mr. John Boehner has things in fine shape and he proposes to go ahead at a lively rate and do a lucrative business.

HOMO.

THE TERRIBLE HAILSTORM that raged on Thursday, June 24, 1897, throughout Essex, Middlesex, and parts of Hertfordshire severely damaged glass houses on over sixty nurseries at Chelmsford and district, Ponders End, Enfield, Enfield Highway, Waltham Cross, Hoddesdon, and Harrow. Twenty-one ounce glass of all sizes was completely riddled, and considerable damage was done to the grapes, cucumbers, tomatoes, and all kinds of plants and ferns growing beneath it. We are glad to hear, however, that not less than thirty of the nurserymen who suffered loss were insured with the Nurserymen, Market Gardeners', and General Hailstorm Insurance Corporation, of King Street, Covent Garden, who immediately assessed the damage done and paid the claims six days later. One nurseryman lost 70,884 square feet of twenty-one ounce glass, and his claim at 3d. per square foot amounted to £886 1s.—*Gardeners' Magazine.*

SARATOGA, N. Y.—The fourth annual parade, battle of flowers and floral ball of the Saratoga Floral Association was held the afternoon of September 7. The bicycle division outrivalled in decorative floral effects anything of the kind yet seen.

EXPERIENCE TEACHES

all things and **WISE** men will learn by the experience of others how to avoid

FOLLY.

We have been telling that we make a good boiler; that it will do good work and save fuel. Astonishing as it may seem, many florists have

BELIEVED

our statement and have bought our boilers and profited thereby. Others have not believed them and have kept right along using

"ANY OLD THING"

that wastes their time and money, imperils their stock and wears their patience. To this large class we would say, **DON'T** believe us, but **DO** believe persons who have had experience with the boilers and note what they say.

For instance:

M. S. WORDEN, North Adams, Mass.,

Writing us recently says: "I am much pleased with my No. 12 Little Giant Hot Water Boiler, and it is a 'Giant' indeed, for it heats so much that I am thinking of building just as much more greenhouse as I now have, and feel confident it will take care of the whole all right. You need not hesitate at any time if any one wants to know about the boiler, to have them write me."

Our catalogue is **FREE** and our prices are **ENTICING.** **GIBLIN & CO., Utica, N. Y.**

Hot-Bed

Sash.

Tenons white-leaded. Corners secured with iron dowel pins. Every detail of construction perfect. Made of Clear Cypress Lumber.

AMERICAN FLORIST CO., 322 Dearborn St., Chicago

Always mention the American Florist when writing to advertisers.

Jacksonville, Ill.

Some six years ago, when I first visited this city, things looked different from what they do to-day. What had impressed me at the time as obsolete or old-fashioned, has since given way to various innovations, showing that this thriving town has fully kept abreast of the times. Among the numerous changes and improvements, that of Mr. Jos. Heinl's flower and seed store is especially noteworthy. The store is located at 229 W. State street, one of the principal business thoroughfares in town, and is a model of its kind, being well equipped with every convenience imaginable. Mr. Heinl, in addition to his flower business, does an extensive trade in seeds, handling a full line of all varieties of garden, vegetable and flower seeds. This department, which is of comparatively recent introduction, has passed its experimental stage, being now an assured success.

At Mr. Heinl's greenhouses everything is in the best of order, the young roses planted during the first week in June looking exceptionally fine. In the carnation line Mr. Heinl finds Scott, Fred. Dorner and Lizzie McGowan fully worthy of their namesakes, though Emily Pierson, Rose Queen and Meteor do almost equally well with him. Three violet houses, each covering 10x80 have been added during the summer to Mr. Heinl's plant.

Trade, as usual at this season of the year is quiet. In the wholesale department Mr. Heinl reports a marked improvement, the sale of rose plants increasing from year to year. HOMO.

CLARKSVILLE, TENN.— The property here known as the Evergreen Lodge Flower Garden has been recently sold by the assignees of the Crusman estate and was purchased by Jas. Morton who was manager of the greenhouse department of J. J. Crusman's business for over twelve years and has since the business failure of Mr. Crusman been renting the property from the assignees, until the recent sale when he became proprietor of all the greenhouse property and sufficient of the land adjoining to run an up-to-date establishment. Mr. Morton is now remodeling the entire place, having torn down a number of the greenhonses, and is rebuilding all in a solid block to which he is adding a new house of cypress material 112x20 feet to be heated by hot water. The property is beautifully situated in the best part of the city and when all improvements are made will be an ideal establishment.

THE Sixth annual session of the National Irrigation Congress will be held at Lincoln, Neb., September 28, 29, and 30, 1897. C. M. Heintz, Los Angeles, Cal., is secretary.

CIRCULAR No. 16 of U. S. Dept. of Agriculture, Division of Forestry, is an interesting illustrated essay on the "Age of trees and time of blazing determined by annual rings."

American Pomological Society.

At the regular biennial meeting of the American Pomological Society, held at Columbus, O., last week, many very interesting papers were read and discussed, and officers for the ensuing term were elected as follows: C. L. Watrous, of Iowa, president; G. W. Campbell, of Ohio, first vice-president; W. A. Taylor, Washington, D. C., secretary; L. A. Taft, of Michigan, treasurer.

BULBS.—The answer to the question "Where shall our bulbs come from?" read at the Providence convention and reported on page 79 of our issue of August 21, was erroneously attributed to Mr. C. L. Allen. It should have read Mr. C. H. Allen.

merit and reputation

Everybody knows the "SPENCE" is a good hot water heater. They know it: 1st, because it *is* good; 2nd, because there have been so many opportunities to hear of its goodness, for the reason that there are so many thousands in use—more than any other hot water heater; 3rd, because it has been so long before the public. The Spence's reputation has been earned solely on its merits. *Catalogue?*

WEST BROOKFIELD, MASS.—The florist business, including land, greenhouses and dwelling house, of Mrs. E. A. Jennings, has been sold to S. E. Walton, of Springfield.

LITTLE FALLS, N. Y.—Crowe & Graham is the name of a new firm of florists here, composed of Mr. Peter Crowe, of Utica, and Mr. John O. Graham, formerly of Binghampton. This does not affect the business of Mr. Peter Crowe at Utica, which is still conducted by him individually. The item in last issue under the heading of Utica was incorrect in this respect.

Fern Notes.

ASPLENIUMS.

No new species have been added to this genus for a number of years, and garden varieties have not been over plentiful except among our British ladyfern (Athyrium felix-fœmina). For trade purposes those of the bulbiferum section are the most useful and, as they can be propagated from the bulbils more readily than from spores varieties do not often occur. I believe if growers were to persevere and raise seedlings, varieties would become as plentiful as they are among other species raised from spores. Of those that do not produce bulbils very few can be propagated except from spores, as they form but one single crown.

Taking A. Nidus, a most useful fern when well grown, there are several varieties, that known as musæfollum being the best. Spores must be taken from large plants which have been grown where the atmosphere is not too close and moist. It requires some perseverance to get a good stock, and they are very slow in a young state, but once they get into 5-inch pots they make rapid progress. During the young state, or I might say always, it is necessary to keep careful watch for slugs and snails; once these get established, it is very difficult to eradicate them, the base of the fronds forming a good cover for them. All the asplenums are more troubled with these pests than most ferns, but few show the effects so soon as the above. In growing young plants a rather molst shady position is best, but after they are well advanced they may be more exposed, which will give greater substance to the fronds.

A. pteridioides is a very distinct species with recurved pinnate fronds, of a deep green with a bronzy tint. It closely resembles the bulbiferum type but does not produce bulbils. From a batch of seedlings raised at Mr. H. B. May's nursery a few years ago a very distinct variety was selected and named Mayii. It has longer fronds than the parent, and has a bright green surface to the fronds. A first-class certificate was awarded by the Royal Hort. Society. Later batches of seedlings from this and others nearly allied, has resulted in further varieties, and only a very limited number have proved to be the true Mayii.

There are several intermediate forms between Baptisti and Novæ-Caledoniæ. The last named has tripinnate fronds very finely cut and of a deep olive green. All of this type may be increased by divisions as they form a number of crowns. Of other seedling varieties Herbsti is worthy of mention, this is more in the way of lucidum. The fronds are erect, pinnate, the broad pinnæ irregular in shape, some being deeply cut into broad segments and some entire. A first-class certificate was awarded for this, and if it will come true from spores it will prove a valuable acquisition.

A. lucidum is one of the most serviceable ferns we have, but it is never over plentiful. I have seen nice batches of seedlings but have had many failures when sowing fresh collected spores. Like many others, the spores from old well matured plants are the most reliable and even with these failures may often occur. A great advantage in this fern is that when once good plants are established they keep in good character for a considerable time, and the fronds being of a thick leathery texture they stand exposure well.

All of the above thrive best when potted in a rough porous compost, fibrous peat with good loam and leaf mould, to which may be added a liberal addition of sharp sand. With plenty of drainage and an intermediate temperature they will give little trouble. I must not omit to add that they are not aquatics; they more often suffer from over watering than from drought. Like most other ferns which show no colored tints in the young fronds, they love a shady position but should not be grown under other plants.

A. HEMSLEY.

Heating.

We have a house 12x60 ft., heated with nine 1¼-inch pipes, supplied by one 2-inch flow pipe. Now, as five of these pipes furnish enough steam to heat the house could we not add to the far end of this house a house (as given below) and heat it or rather furnish enough heat for it through this 2 inch pipe which supplies the house mentioned? The size of the house we want to add is 36x16 and 13 ft. from floor to ridge. It has a gable on each side as high as the house and 16 ft. at the plate. The house will be exposed on two sides and one end. The eave or plate is 5½ ft. from ground; three ft. of wood and 2½ ft. of glass compose the sides and end.

How many 1¼-inch pipes will it take to heat it, or what would be the best way to pipe it? How large a pipe would it take to return the condensed steam to the boiler? B.

B. can possibly heat the additional house through the one 2-inch main, but if it were my own case I would prefer to run an independent main for the addition, as I think it would be much easier on the boiler and give better satisfaction in the end. With nine 1¼-inch pipes in a house heated by steam 12x60 he certainly has at least one-third more piping than is required. Why not reduce the number of pipes in this house, carry a 2-inch main to the new addition and branch into the smaller pipes, which for a house 16 feet wide and 13 feet high I would prefer to use nine 1-inch pipes with valves on each flow, thus giving absolute control of the temperature at all times. I would also

prefer to make each pipe one continuous run all round the house; thus in mild weather probably two pipes all round would be sufficient, while in very cold weather it may require the whole piping. The one extra pipe could be carried on the coldest side of the house, either as a flow or return connected with another.

Regarding the size of the return pipe for condensed steam, a 1½-inch pipe with a good fall would be ample and it would be advisable to drop this near the boiler to below the level of the water in boiler, thus forming a trap to prevent back pressure. JOHN N. MAY.

Water Supply.

A subscriber asks: "Is it better to put up a windmill to supply water for 10,000 square feet of glass, also dwelling house, stable and lawn, or to take the city water at the rate of 50 cents per thousand gallons?"

I have windmill and tank in use in a country village and city water at the city place. The rate of 50 cents per thousand gallons is outrageous and you cannot afford to pay it. For a place of about 30,000 ft. of glass I was paying by meter 4 cents per thousand gallons. That is a rate which in our city is known as "Commercial business other than manufacturer." You could afford to pay 10 cents per thousand gallons, and it would still be better than going to the expense of a mill and tank. More than that I would not pay.

I dreaded when building in the country to be without city water but am now perfectly satisfied. My tank holds 150 barrels and cost $40, the windmill and pump about $100. This is the fifth year it has been running and with the exception of oil has not cost 5 cents. It supplies water for 22,000 square feet of greenhouses and will supply still more. The higher you can raise your tank the better force you will have. Be sure you have a well or some other supply that you can't pump dry, and if you get a mill be sure and purchase the Chicago "Aermoter;" it's a dandy. WM. SCOTT.

Pittsburg.

BUSINESS STILL SLOWLY IMPROVING —HEAT AND DROUGHT INJURES OUTSIDE STOCK — OUTLOOK FOR WINTER'S TRADE.—CLUB MEETING —MEETING OF BOTANICAL SOCIETY.

The slight improvement in business still continues, although the extremely hot spell of the week is very much against revival of business. The hot weather without any rain has seriously affected the outside flowers, making them small and short-stemmed, and the foliage of the trees is literally dried up, the leaves dropping off as they do in the late fall, but with all this there is a better feeling prevailing in business circles, and the outlook for the fall and winter is good.

Messrs. Elliott & Ulam report trade with them as very fair for this time of the year, and it has been the same all summer, their sales being greater each month this year than the corresponding month of last year. They are anticipating a good winter trade.

Messrs. Randolph & McClements also report trade very fair. At their greenhouses on Forbes street everything is looking well, especially their chrysanthemums. This firm are also of the opinion that the winter's trade will be very good.

The florists' evidently have not recovered from their trip to Providence, or else the extremely hot night prevented them from attending the meeting on the 9th inst., not enough for a quorum being there. It is hoped the members will turn out in force at the next meeting on the evening of the 23d inst.

The Botanical Society of Western Pennsylvania on Thursday night, September 2, held its regular monthly meeting at Carnegie Library Hall in Schenley Park. These meetings are open to the public and are intended to be educational in a very great degree. For this purpose all the resources of the park and conservatories are available and that a great interest is being awakened is shown by the attendance on Thursday night, the room being crowded and this only the fourth meeting, the first one having but a very few outsiders attending. Mr. Wm. Falconer officiated as lecturer and demonstrator; 79 natural orders were represented and 215 distinct genera, in many cases several species being shown. He commenced with showing a large collection of fruiting and ornamental shrubbery, fruits predominating—Barberries, native, Japanese and a large number of representatives from the mountains of India and Asia, Cornus, and especially large branches of Cornelian cherry, loaded with bright red fruit. Hazel nuts with the nuts in their husks. Cotoneasters, mostly deciduous species from the Himalayan mountains. Different kinds of elæagnus, covered with berries; branches of bayberry, sprays of beach plum, Irish blackthorn (Prunus spinosa) many species of euonymus, with sprays of unopened fruit, and partly unripe but all very beautiful, also branches of Chirquepin chestnuts and dwarf oaks. Perhaps the most striking fruits shown were the hips of many species of roses, comprising hardy, Japanese, European and American, some glistening scarlet, others plum purple, oval and round shaped; the fruits are the hips of single roses and form a very great additional attraction to the bush, flowers in the spring and the fruit in midsummer and up to frost. Handsome flowering crabs, from China, Japan and Siberia, the sprays laden with fruit from the size of small peas up to those of transcendant crabs, were shown in many varieties, but there was nothing brighter among the collection of berry plants than the sprays of our high bush cranberry (Viburnum opulus) and the large fruiting variety of it from the mountains of Pekin.

At the end of the lecture, or more properly talk, the eagerness with which the audience gathered around the table on which the fruits were shown, picking them out and bunching them with the flowers (all were given away freely to the audience) showed how much they were appreciated. The collection mentioned above was contributed by Mr. John Dunbar, Ass't Supt. of Highland Park, Rochester, N. Y. Banana fruits, the tree tomato in fruit, and the panama hat plant (Carludovica palmata) displaying its head of vivid red berries, were furnished from the Phipps conservatories in Schenley Park.

In the aquatic division a large leaf of the Victoria Regia lily, over 7 feet in diameter, was shown in its entirety; the under side of the leaf, as regards the construction of the nerves, ribs, etc., as fully explained, showing how impossible it was for the leaf to sink under any moderate pressure; in fact it would support a weight of about 200 lbs., and yet one could put a hole in its surface with his fingers. A very large open flower was also shown proving a novelty to many in the room; the flower stem is very spiny, more so than any other flower we know. The leaf was cut up into sections, and given to any one who wanted a piece. Of nymphæas both tropical and hardy there were about 27 distinct kinds; the night bloomers had flowers all open, the day ones all closed. Red, blue and yellow colored ones were shown in the same genus. Nelumbiums, half a dozen flowers with the heads tied up (the petals fall off so easily) came from Philadelphia, also seed vessels with them; other aquatic plants, the Water Poppy, Water Hyacinth, Parrot's Feather, Water Lettuce, azolla, etc., were shown and the uses of each explained. Mr. Henry A. Dreer of Philadelphia kindly contributed the nelumbiums and some of the lesser plants.

When through with the shrubs and aquatics, Mr. Falconer turned his attention to the tables on which was a very large collection of cut flowers, including everything in bloom in Schenley Park. The exhibition being under the auspices of the Botanical Society, they had the flowers arranged in botanical sequence. This was also much more convenient for showing them, and explaining the likeness and unlikeness of members of the same family, for instance, beginning with the crowfoot (ranunculus) family, several specimens of clematis and great bunches of delphinium, anemones, and belated columbines were held up before the audience and explained as being all members of one family. Then we passed on through poppies, candytuft, mignonette, violets, tamarix, hypericum, pinks, hibiscus, geraniums, pea flowers, roses, hydrangeas, sedum, fuchsia, and so on through most all cultivated plants. Take for instance the poppy family; it seems hard to reconcile the bocconia with the poppy, the geranium family, balsam, oxalis and nasturtium. Among peas were clover, the sensitive plant, cassia, swainsona, etc. Honeysuckle family, the snowberry, elderberry and diervilla. Many looked with astonishment when told that an elderberry and a honeysuckle were so nearly related.

The great composite family was shown in 30 genera, range including ironweed, eupatorium, blazing star, coreopsis, marigolds, wild and China asters, prairie dock, sunflowers, corn flower, feverfew, and others. Among gesneria were gloxinias, achimines, saintpaulia. The next order included snapdragon, veronica, fox-glove, mimulus, salpiglossis. In the solanum family were magnificent petunias, peppers, tobacco, Jerusalem cherries, tree tomato, matrimony vine and daturas. Oleander, allamanda and vinca were shown as members of the dogbane family. A good deal of interest was displayed when was held up a large bunch of Chinese lilac (Syringa pekinensis) and it was asked if any botanist present could name it, and not one could tell what it was, whether spiræa, elderberry or what family it belonged to. The pupils of the high school botany class were much interested when told that the colored leaves of bougainvillea were not flowers but simply bracts outside the real flower. When it came to the euphorbias a bunch of blossoms of the white spurge (E. corollata) one of our common wayside plants, the colored acalypha from the flower garden, the many hued croton, the edging box, the daintily tinted phyllanthus and the coarse looking castor bean were all members of the same family.

A few beautiful orchids were shown, the Butterfly orchid (Oncidium papilio) was passed around that all might see how perfectly some insects are imitated by flowers. The amaryllis family was represented by pancratiums, the iris by gladioluses and montbretias, the lily

MR A DONAGHUE. VICE-PRESIDENT ELECT OF THE SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

family by lilies, funkias, hyacinthus, tritoma and anthericum. At the end of the talk a handsome pitcher plant (Nepenthes Mastersii) was passed around with the explanation that the pitchers were not the blossoms but simply ornamental appendages to the leaves, and thus was dispelled an illusion held by many; a spray with a raceme of the true blossoms was also shown.

This exhibit was vastly more interesting and instructive than an ordinary flower show and will be more productive of good to the trade. Next month a more commodious room will be secured, as it is a foregone conclusion that a greater number will be in attendance. There is no expense attendant on the meetings, the exhibits are donated, the room ditto, and it will not be the fault of the Botanical Society if the people are not educated and benefitted, and with this the case the commercial florist will certainly be the gainer. REGIA.

A. Donaghue.

We present herewith a portrait of Mr. A. Donaghue, of Omaha, the vice-president-elect of the Society of American Florists and Ornamental Horticulturists.

Mr. Donaghue was born in Essex, England, November 9, 1841, and began his work as gardener when a boy of 11 years; later he engaged in all the various departments of gardening and floriculture. He came to the United States in 1864, and for a time was in the employ of Mr. Edgar Sanders, an old time Chicago florist. He removed to Omaha in 1867, where he rented eight acres of land and started a market garden. He had everything in good condition and a portion of his crop about ready to market when the grasshoppers came along and in six hours cleaned off everything but a few sweet potatoes. The next year he started again with three acres in vegetables, and was again visited by the grasshoppers, losing about one-third of his crop, when a heavy cold rain came and destroyed the hoppers. At the end of the year he was a little ahead.

In 1872 he built three small greenhouses, from which beginning has resulted the present large establishment and fine business. It is the old story of hard work and conscientious attention to business, eventually crowned by well-earned success.

Mr. Donaghue takes a deep interest in the success of the S. A. F. and will undoubtedly spare no effort to make the Omaha convention the success it ought to be.

New York.

ANNUAL DINNER OF THE NEW YORK GARDENERS' SOCIETY.—SEPTEMBER MEETING OF THE NEW YORK FLORISTS' CLUB.—MORE VARIETY IN FLORISTS' FLOWERS ADVOCATED.—HOT WEATHER INJURES BUSINESS—FLOWERS OVERSTOCKED AND PRICES VERY LOW.—A NEW FLOWER STORE.

The first annual dinner of the New York Gardeners' Society was held at Grand Central Palace on Saturday evening, September 10 and was in every way creditable to those who managed it. About seventy-five gentlemen were present. The tables were adorned with showy vases of dahlias and gladioluses. The three days' spell of torrid weather had come to an end a few hours before and the cool breeze brought big appetites with it and it was late before all were fully satisfied. Then president John Shore called to order and asked Charlie Weathered to act as toastmaster, a duty which that gentleman courteously accepted and brief speeches were the order for about an hour, Mr. Hunter opening the exercises with an excellent rendering of the song "The March of the Cameron Men."

"The New York Gardeners' Society" was the first toast. President Shore responded, urging the cultivation of a fraternal spirit as the best means of ensuring a prosperous future for the organization. President Henshaw of the New York Florists' Club responded for "Our Sister Societies." He called attention to the great improvement in the condition and surroundings of the young gardener of to-day over those prevailing when he began his career. He related an incident which happened twenty-eight years ago when thirteen gardeners of New York dined together, he being the only one of the party now alive.

W. A. Manda spoke for "The Society of American Florists." He questioned the wisdom of dividing forces by maintaining separate organizations of florists and gardeners whose interests are so nearly identical and thought that mutual benefits would result if all were to enlist under the one banner of the parent organization. Alluding to the necessity of constant effort to improve and to elevate the profession he spoke hopefully of the prospective advantages to be derived from the establishment of the New York Botanic Garden and the facilities for exhibitions and other means of advancement which are promised.

Wm. J. Stewart of the American Florist was called upon to speak for the "American Horticultural Press." He acknowledged with gratitude the indebtedness of the horticultural press to the gardeners without whose support it could not live and asserted that wherever good gardeners are found there will also be found horticultural literature of the highest class. In no other profession do we find individual generosity so prevalent as among the gardeners, who are always ready to give their neighbor the benefit of their own experience, and the horticultural press is the legitimate outlet for the exercise of this generous spirit. Mr. Wm. Anderson spoke for "The Old-fashioned Gardener," disclaiming, however, any right to the title for himself and J. H. Troy responded for the florist business, saying that the season in Newport had been very encouraging.

Wm. Scott gave a recitation in Scotch dialect in which "Maggie Hoo's" second honeymoon was apply explained and then C. W. Ward was called upon to respond for "American Floriculture." Mr. Ward applauded the multiplicity of societies and, contrary to Mr. Manda's views, argued that the increasing number of societies is an indication of growth and progress. He did not believe that the work of special and local societies would interfere with the prosperity of the parent organization which he believed should always have the co-operative support of the others. He predicted that the S. A. F. having passed through its youthful exhuberance and reaction would henceforth make a normal solid growth. His speech was marked throughout by a hopeful earnestness that made a great impression. There was a number of other speakers and it was midnight before the pleasant affair came to a close.

Around the room, which by-the-way is admirably adapted for exhibition purposes, were tables on which a fine show of flowers, plants and vegetables were

spread. Robert Laurie showed Acidenthera bicolor and seedling tritomas; H. A. Dreer, nymphæas; James Hill, a handsome bromeliad; Jas. Kirby, herbaceous flowers; Richard Brett, dipladenias and ixoras; Lager & Hurrell, a fine plant of Cattleya chrysotoxa; Rob't Angus, Cattleya labiata; W. A. Manda, caladiums and cannas; A. Grierson, a collection of flowers; G. Eisele and A. L. Marshall, seedling cannas; W. Anderson, W. P. Peacock, Mr. Granz and Chas. Zeller & Son, large collections of dahlias; A. Welsing, geraniums and cannas; J. Lewis Childs, gladioluses, etc.; John Young, lily of the valley; A. J. Wengertner and A. T. Brill, vegetables; G. B. Winslade, fruit; C. W. Ward, a superb display of cannas, dahlias and geraniums. There was also a collection of vegetables sent on the steamer Campania from C. Alldred, Tyldesley, Lancashire, Eng., but it cannot be truthfully recorded as of prize-winning quality.

The meeting of the New York Florists' Club on Monday evening was a lively interesting occasion and made up in enthusiasm for lack of numbers. Messrs. J. N. May and Chas. H. Allen talked, by special invitation, of the recent visit to Providence and Newport. The verdict of both these gentlemen was that in instructiveness and value to the visitors the Providence convention was equal if not superior to any of its predecessors. Dr. Goodale's superb lecture, Swan Point Cemetery and the trade exhibition were noted as especially excelling. A vote of thanks was passed in recognition of the hospitality of the local clubs of Providence and Newport and Secretary Young was instructed to forward a copy to each.

President Henshaw talked interestingly of what he saw on his recent trip to Great Britain and Ireland, particularly the botanical gardens where he found much valuable information. Out of his address sprang a discussion, participated in by Messrs. Allen, May and Dimmock, in which all agreed that it is unfortunate for the American floricultural trade that the list of popular flowers in the trade is so small. They urged that there were many beautiful flowers, some of them "old-fashioned" that should find a prominent place in the florists' business and advocated agitation of the subject.

C. H. Allen exhibited a fine lot of cannas, including some of his own seedlings. The committee on awards will soon be called together to decide upon the question of the disposition of the club's gold medal and designate some worthy object for which it may be offered in the near future.

The hot weather last week knocked the life out of all flower stock coming to this market and made a bold attempt to knock the life out of the unfortunates who were obliged to grow, cut or market it. A trip around among the wholesale establishments developed the fact that September trade has been and still is below the average, that J. K. Allen has received his first consignment of double violets and that they were very good, that Traendly & Schenck are receiving Kaiserin roses that are exceedingly handsome, that everybody has lily of the valley in quantity, that the new wholesale establishment of MacDonald & McManus on 30th street compares well with its neighbors and that the wily grower is already prospecting among the ambitious commission men in search of especially favorable offers for his prospective output although just at present two dollars and a half a thousand is good money for bulk roses.

G. H. Linsdale has added a new horse and flower wagon to the equipment of his 23d street store. The wagon which he proudly asserts is of "Altman style" is equalled in grandeur only by the handsome black horse that draws it and the boys are uniformed to match.

N. Christatos has disposed of his Madison avenue store to Petro Kondulis and has opened a new one at 1028 Sixth avenue, corner of 58th street.

Louis Sherry, the well-known New York caterer, is about to open a flower store at 37th street and Fifth avenue. Wm. S. Lee, well known here as an expert flower worker for many years, is to be manager.

Visiting New York: A. H. Hews, North Cambridge, Mass.

Philadelphia.

SEASON STARTED —ASTERS ON THE WANE.—ROSES BETTER —VALLEY PIPS.—SHUFFLE BOARD CONTEST — BOWLING.—VISITORS. —DUMONT HUSTLING. — FRED. EHRET HAS A WEDDING OF HIS OWN.

There is a noticeable difference in the crowds in the shopping districts and the summer shutters are coming down from the houses in the residence portion of the city. A few early weddings are taking place and altogether it may be said that the season of 1897 and 1898 has started.

Asters are on the wane and from present appearances will hardly hold out until chrysanthemums arrive. Roses are getting better; all kinds seem to be improving both in size of flower and length of stem. There are quite a few Carnot coming in; they look well and considering the light demand sell as well as other varieties. Prices of all kinds are about the same as last week. Carnations are looming up and in the absence of asters are being asked for. White and pink are the only colors as yet. Valley is selling a little better but the demand is uncertain; some good stock goes to waste.

Wm. Hageman, who imports valley pips in large quantities, says the quality of lily of the valley has of late years entered more into competition than the price, as growers prefer to pay a little more so as to insure high grade stock. His importation this year will amount to 3,300,000 pips, and in order to insure the quality and safe dispatching of the same Mr. Hageman sailed for Europe by the Fuerst Bismarck, Thursday last, so as to be on the ground at this important time.

There is to be a shuffleboard contest at the alleys commencing next week. All desiring to participate should call at the club room and enroll their names. The entrance fee is 50 cents and the sum so collected will be used to purchase prizes for the winners. Each contestant is to play one game with all the others, the total number of points made to count. The question of how to manage the affair so that all may meet conveniently is puzzling the heads of the committee not a little. Can any one suggest a schedule, say for twenty-four men, that will not conflict.

My attention has been drawn to an omission which shall no longer go unrecorded. When the boys from Philadelphia came home from the convention laden with prizes and trophies, both individual and collective, it was only natural that some rivalry would be engendered. Captain (Isaac) Kennedy made the statement that he could organize a team of bowlers that would beat that team which did so bravely for the Quaker City at Providence. The challenge was accepted. The contest was between the "Providence" and the "Yanigans;" the latter won with the comfortable margin of 119 pins, which is ample evidence that Philadelphia is right in it when bowling, as well as shooting, is the order of the day. There is some difference of opinion as to whether the "regular" team of Philadelphia Florists' Club bowlers or the "Yanigans" now owns the Evans challenge cup for the remainder of the year. One of the regrets among the bowlers here is that St. Louis, with its reported high scores, did not send a team to Providence. Perhaps they are holding themselves in reserve for Omaha.

P. J. Hauswirth, Great Sachem of the Redmen of Illinois, and one of Chicago's most genial florists, visited our city this week accompanied by his wife and Miss Kreitling.

Dumont, the Filbert street commission merchant, is hustling these days. A new ice box just put in enlarges his cold storage capacity, and the addition of a long distance telephone will make it convenient for those in a hurry, and an increased force of assistants now await the fall rush.

Frederick Ehret, the up-town commission man, was married to Miss Clara Bezuer last Wednesday evening, at the residence of the bride, which was elaborately decorated for the occasion. The bride's bouquet was of lilies of the valley. The happy pair are now off on an extensive tour including Niagara Falls, the Thousand Islands and Quebec. K.

Chicago.

OUTING OF FLORISTS' CLUB —FINE DISPLAY OF CANNAS.—A NEW FIRM.—THE CHRYSANTHEMUM SHOW.—THE MARKET.—PERSONAL ITEMS.

The fourth summer outing of the Florists' Club was a trip to Mr. J. C. Vaughan's greenhouses at Western Springs, and took place last Saturday afternoon. Mr. Vaughan had thoughtfully reserved two special cars for the party, and the trip out was a very pleasant one. Arriving at the station, the party was met by Mr. J. S. Wilson, manager of the greenhouses, and conducted to the large range of glass. The display canna beds containing many novelties attracted first attention, and much time was spent in a critical examination and comparison of the various sorts. The long drought had made it something of a struggle for the cannas in the field, and the difference between the plants in the field and those of the same variety in the display beds, which had received artificial watering, was quite marked. All looked remarkably well under the circumstances. There is a total of about seven acres devoted to cannas at this place, some 25,000 plants occupying this space, and the display of brilliant color was one to be remembered. Burbank is certainly a remarkably free bloomer, but Yellow Crozy seemed to stand the sun rather better. Italia and Austria showed to good advantage. Allemania resembles the latter very closely. Chicago is certainly to the front as a scarlet and will be hard to equal from every point of view. Egandale seems to still hold first place as a dark foliaged scarlet. Philadelphia is of a very deep rich color, darker than Bouvier. The variegated variety, John White, showed hardly enough variegation to make it very striking. But it would take pages to describe the host of sorts to be seen in flower here. After the cannas came the houses and frames. A very great variety of stock is grown, including most everything that enters into a florist's collection. All seemed to be in good condition, and the inspection

SOME OF THE CANNA BEDS AT VAUGHAN'S GREENHOUSES, WESTERN SPRINGS, ILL.

proved profitable as well as interesting.

Down the center of the long packing room a table was discovered, handsomely decorated with vases of cannas and other flowers, and plants and flowers were freely used elsewhere about the large room. Mr. Wilson is to be congratulated on his arrangements for this part of the entertainment. A vase of Burbank cannas on the table was superb—the flowers perfect as to size, form and color. The guests were invited to seat themselves, and the number was found to be 73. An excellent lunch was then served by the Women's Club of Western Springs, upon whom Mr. Vaughan had called to assist in caring for his guests.

At the conclusion of the repast Mr. Vaughan welcomed the visitors in a brief address, expressing his pleasure at their presence and trusting that all would go away with pleasant recollections of their visit. Mr. Edgar Sanders responded on behalf of the club, speaking of the success of the outings, the large attendance at and the interest in same, and warmly thanking Mr. Vaughan for his generous hospitality. Mr. W. H. Chadwick, president of the Horticultural Society of Chicago, responded on behalf of those visitors who were not members of the club, and spoke of the value of such gatherings in the general advancement of horticulture. He thanked Mr. Vaughan for the opportunity afforded all to view so many beautiful flowers, and for the entertainment so freely provided.

Mr. F. S. Allen, of Joliet, spoke of his interest in the canna and of the varieties he had seen during a recent eastern trip. Mr. S. A. Wolcott, of Batavia, told how it felt to be a "mascotte" and a grandpa, and brief addresses were made by others. These were interspersed with vocal selections by the trio composed of Messrs. McKellar, Winterson and Lynch. The thanks of the club were extended to Mr. Vaughan by a unanimous vote for his kindly welcome and generous entertainment. All returned to the city feeling that they had spent a most instructive and enjoyable afternoon. This will probably be the last outing for the season.

The wholesale cut flower and supply business of Chas. W. McKellar will hereafter be conducted by a new firm, Vaughan, McKellar & Winterson, composed of A. L. Vaughan, Chas. W. McKellar and Ed. F. Winterson. The business will be enlarged in all lines, and particularly in the department of florists' supplies. Mr. A. L. Vaughan, who becomes the senior member of the new firm, is well and very favorably known to all the western florists and seedsmen from his long business connection with J. C. Vaughan and E. H. Hunt. Lloyd Vaughan, as he is familiarly known, has been one of the most popular travelers on the road, making readily very firm friends. His kind, unobtrusive and gentlemanly ways should be very advantageous to the new firm.

Reports to the effect that the next annual chrysanthemum show of the Horticultural Society will be given in connection with the horse show at the Coliseum have no foundation in fact. A proposition to combine the two shows was made by the horse show people, but was not accepted by the Horticultural Society. There is no doubt whatever that the chrysanthemum show will be held independently as heretofore, and under the direct management of the Horticultural Society.

Mr. C. Cropp, of Vaughan's Seed Store, arrived at New York September 15 by S. S. Lahn.

A few cool, cloudy days have shortened up the supply considerably, resulting in a perceptible increase in demand, with a corresponding increase in prices. There is quite a brisk demand for American Beauty, the call being for the better grades.

As a rule carnations are very poor, most of them contracting the regular habit of going to sleep every night. An exception to this rule was found in Mr. W. Lynch's disbudded Daybreaks and Portias, which were exceedingly good for this season of the year. The price received ranges from 50 to 75 cents for best shipping stock.

Mrs. A. G. Prince and sons have returned from a two months' sojourn in the east.

Mr. Louis Schoof, grower at Homewood, Ill., has to-day joined the ranks of the Benedicts.

Visitors: H. A. Bunyard, representing Pitcher & Manda; W. S. Rennison, Sioux City, Ia.

Boston.

A HOT WAVE.—FLOWER BUSINESS FEELS ITS EFFECT.—A VISIT TO TAUNTON.—FLOWER SHOW AT THE FRUIT AND VEGETABLE EXHIBITION.—AUCTION SALES.—PERSONAL MENTION.

Boston got its share of attention from the hot wave last week. Flowers wilted and so did florists and customers, too. Business diminished as the temperature and the quantity of stock increased and it took extra sized rubbish barrels to hold the resulting accumulation. There are more roses than are needed and more asters than can be used, but carnations are within the limit and they sell all right, regardless of the weather. Funeral work, that life preserver of the florists' trade when everything else seems to go against him, has been quite active recently, and the white asters, lilies and other useful stock for this purpose have thus found an outlet denied to the brighter colored bloom, which should serve as a pointer to the aster grower when he sows his seed next year. Society people have not yet returned to town and the transient sojourner cares more for sea breezes, subway and ancient landmarks than for flowers in any form and it would seem as though an extension of time to the clerks on vacation and a continuance of the five o'clock closing rule for a couple of weeks longer might have been indulged in without any very serious results to the proprietors' pocket books.

It was on Thursday, one of the hottest days ever let loose on an unsuspecting September, that the garden committee of the Mass. Horticultural Society set out for a visit to Taunton, an hour's ride by rail from Boston. The fruit, vegetable and dairy farm of Col. Fred. Mason was the objective point. Mr. E. C. Lewis, the superintendent of this model establishment, met the party at the station and drove them to the grounds where they were welcomed by the proprietor who was

found to be not only a perfect example of the modern gentleman farmer but a man of broad views and sound judgment as to the most acceptable and fitting entertainment for a representative horticultural party from the Hub on a hot day. All were made to feel very much at home, the dinner was excellent, the farm, on inspection, was found to be productive and well managed, more like a garden than an ordinary farm, in fact, and should Taunton ever aspire to be the new Hub of the universe there are ten votes that she can have for the asking.

There was a fine fruit and vegetable show in Horticultural Hall on Saturday, September 10. In addition, there were dahlias in large numbers and dazzling variety as well as a good showing of other seasonable flowers. Robert Cameron was the recipient of a certificate of merit for Aster Novæ Angliæ alba, and Robert Laurie got honorable mention for fringed tuberous begonias. From N. T. Kidder and Oakes Ames came grand collections of hardy herbaceous flowers.

Plant auctions are on again. N. F. McCarthy will run regular semi-weekly sales for a while and Edward Hatch will have a notable sale in Horticultural Hall on Wednesday, September 22, when buyers are expected to show their faith in returning prosperity.

Michael Gray, formerly gardener on the late Col. Peabody's estate, will start a florist business business in Mattapan.

P. Welch has returned from his vacation at Old Orchard just in time to insist that the park makers pay proper value for his front garden and lawn which they have taken for boulevard widening.

A visitor in town: J. Austin Shaw, representing Siebrecht & Sons, and with a fine stock of palms to offer.

Toronto.

THE EXHIBITION. — TASTEFUL FLORAL ARRANGEMENTS —MR. SCOTT THE JUDGE. —GOOD DISPLAY OF FLOWERS.—A GRAND COMBINED KICK NEEDED. — VISITORS.— CRICKET GAME THURSDAY.

The cut flowers, floral designs, etc., make a gay show at the exhibition. The designs this year were all in the best taste and as near perfection in that line as it is possible to get. Mr. Wm. Scott, of Buffalo was the judge and I am sure he must have had a hard task. He did not give his dicislons as I and some others would have given them, but then were there ever two people who agreed on matters of taste in this line? The work being perfect and the flowers good the judge can only exercise his taste. Messrs. J. H. Dunlop, Grainger Bros., C. Tidy, C. Arnold, H. Dale, Manton Bros. and J. Cotterill were the principal exhibitors. I should like to discribe their separate exhibits but time and space forbid; they were all really beautiful.

Brides' and bridesmaids' bouquets were also very good. Cannas made a fine showy exhibit, many of the latest novelties being amongst them. Gladiolus showed no particular improvement over other years. There was a very large exhibit of sweet peas and a very pretty show they made, some bunches amongst the "12 varieties" being very fine. Asters were away ahead of former years, Semple's showing up like big chrysanthemums. There was about the usual amount of phloxes, pansies, roses, lilies and collections of cut flowers, all of which if shown in a suitable building would have made a magnificent show.

And here I would reiterate what I said in my last week's notes concerning the Horticultural. No time should be lost in getting up a grand combined kick, a kick that will make itself felt until a new hall is built. The beautiful designs mentioned, the bouquets, cannas and gladiolus were stuck up in one end of the fruit hall and were unseen by most of the crowd. There is still more to find fault with, namely the arrangement of the cut flowers. An assistant calls out the sections in their order in the prize list and the articles are placed on the benches in that order regardless of size, color, taste or anything else; not the slightest attempt is made at arrangement for effect, just the mechanical part of showing is gone through with and nothing more. I say that all this should be changed and if the Gardeners' and Florists' Association and the Horticultural Society don't set to and endeavor to get these and other kindred matters remedied they will be deserving of having the letters "N. G." tacked on to their name. First let a strong resolution be drawn up and put at regular meetings of the two societies it will doubtless be passed unanimously. Instruct the two delegates from the Horticultural Society to the Industrial Exhibition Association to push the matter all they know how, and let a deputation go down to some meeting of the directors of the I. E. A. and insist on some improvement being made. All the materials are at hand for a magnificent display at these I. E. flower shows; all that is wanted is a new hall properly designed and laid out and a superintendent with firmness, tact, and above all, taste. "Allons mes braves," let us get it and make a name for ourselves.

Visitors: Mr. W. Scott and son, Buffalo; Mr. Large, from the same place; Mr. Robt. Brooks, Fergus; Mr. James, gardener at Agricultural College, Guelph, and there were others.

The gardeners and florists will excurt to Mr. H. Dale's place at Brampton on Thursday, 18th, and endeavor to beat his crack eleven again at cricket. We may do it if the weather is as favorable as it was last time. E.

Buffalo.

BUSINESS PICKING UP.—MOST FLOWERS PLENTIFUL.—ACRES OF ASTERS —CARNATIONS SCARCE —WM. LEGG MOVES HIS HOUSES.—H. D. BUDDENBORG MAKES AN ADDITION.—TORONTO'S GREAT FAIR.— CALLERS.—W. S. RETIRES TO THE SECLUSION OF CORFU.

The fall weddings have begun and business is picking up. We can't all have the big orders but if business is going it helps all a little. Flowers have been very plentiful; far too many asters to be healthy for the grower. I see almost acres of fair asters that it does not pay to pick and send into town. Carnations are of course scarce and only those from the field are to be had. We had so much rain in the early part of the season that a dry spell was welcome, but for nearly a month we had up to Monday last been without a shower. So dry was it that some growers had to flood their field of carnations before they could lift them and others had to put off the job till we did get a rain. It came on Monday copiously.

Mr. Wm. Legg, of Delevan avenue, has moved his houses, and added several new ones, on to Delaware avenue, nearly opposite the entrance to Forest Lawn Cemetery. Mr. Legg will have a handsome front and the location is excellent, not only for Forest Lawn trade but for that growing territory so rapidly being built up and known as the Elmwood district.

Mr. Henry B. Buddenborg, of Elk street, is also building a 50x20 palm house in rear of his store, which must be a great help to him.

Your correspondent had once more the honor to act as judge of cut flowers, designs, etc., at Toronto's great fair, and it is a great fair. The horticultural department is but a small corner of it, yet it was gratifying to see with what interest and pleasure the thousands thronged the horticultural hall. The display of both plants and flowers was quite up to former years. Where else can you see such a show of dahlias? And when Dale, Dunlop and Muston all show cut roses the display is guaranteed.

We had a pleasant call from Mr. G. M. Kellogg, of Pleasant Hill, Mo., who says: "When I attended my first convention (Chicago) I had one little house and knew little of the business. I have now over one hundred thousand ft. of glass, and have got my inspiration from attending every convention and reading the horticultural papers."

That's pleasant to hear, and who can say that conventions do no good? Only the "know all stay at homes." Mr. Aug. S. Swanson also called, but to our regret we missed him as we have been in the rural village of Corfu for the past ten days. We have possibly missed more but we have gained strength and vigor from fresh air, pump water, hard work and an early retirement to roost. W. S.

St. Louis.

BUSINESS VARIABLE. — SCORCHING HEAT LOWERS QUALITY OF STOCK.—MEETING OF FLORISTS' CLUB.—THE CHRYSANTHEMUM SHOW.—BUSINESS CHANGES.—VARIOUS ITEMS.—BOWLING.

The business for the past week was up and down. A few large openings down town kept some of the florists busy and some of our society people are beginning to return from the summer resorts. This with the opening of the schools and of the exposition has kept us a little busy, but not what it should be; it is too hot.

The scorching heat of the past week has not improved the quality of stock and especially the roses. White roses, Brides and Kaiserins, are plentiful, but the Brides are small and many of them more or less mildewed. Kaiserin are very good. Red roses, particularly Meteors, are very good but not so plentiful. Bridesmaids are very abundant and there is not much sale for them. Testouts and Carnots are a little scarce. First quality Beauties sell readily, but the short stemmed ones sell slow and cheap.

Carnations are slow in improving. Daybreak, Scott and white are plentiful but small and very short stemmed. Very little outdoor stuff is now coming in. Asters and hydrangeas are nearly all gone. Gladioluses and tuberose stalks are still plentiful and slow sale. Smilax and asparagus are looking better.

The September meeting of the Florists' Club was held Thursday, September 9, with a small attendance owing to our secretary having failed to send out postal cards to the members, but those that did come had a good time. The installation ceremonies created lots of amusement for those present and after the installation was over the same ceremonies were used for the initiation of Frank Ellis, Theo. Richter and George Windler, after which they were declared members of the Florists' Club.

The exhibition committee made a report that the proposition they made to the exposition management for the Coliseum

CHICAGO FLORISTS AT VAUGHAN'S GREENHOUSES, WESTERN SPRINGS, ILL.

had been rejected. The chairman of the committee then reported that the chrysanthemum show this year would be held down town in some large vacant building. The public school library building has first choice and should we secure this building we would use the first and second floors. They also reported that everything looked favorable for a good show. Special prizes are coming in better than last year and the amount of special prizes will be doubled.

The two trustees reported that two essays would be read at the next meeting of the club, which will be held the afternoon of October 14 at 3 o'clock. President Halstedt expects a better attendance then.

George A. Kuhl came down from Pekin last week to spend a day with us.

Fred. Weber made a fine decoration at the Union Club house last week, the occasion being the golden wedding anniversary of Col. Chas. G. Stifel. The decorations were elaborate and much admired by all present.

Eugene Wurst, late foreman for Mr. Brown, at Brownhurst, has opened business on his own account in East St. Louis, Ills. Mr. Wurst has built two houses 60x18. He has now 3000 feet of glass and will grow orchids for the trade.

The Ohio Valley Floral Co., with L. T. Posey as manager, have bought out Miss C. E. McCormick's store, 20 South Broadway. Their greenhouses are at Henderson, Ky.

The Krebs Floral Co. filed articles of incorporation August 9; capital stock $2,000, all paid. Margaret Krebs holds 7 shares, Valley Rayburn 7 shares, and Fred J. Foster 6 shares. The company will do a retail business at 602 Olive street. Festus J. Wade, who was at one time secretary of the St. Louis Fair Ass'n, and now in the real estate business, is the backer of the new company. Mrs. Krebs is his sister, Valley Rayburn is an attorney in St. Louis and Fred J. Foster is late of Milwaukee, where he was in the florist business. None of the parties have any knowledge of the business except Mr. Foster. They will be open for business October 1.

Mrs. Rotter, late of Cass avenue, will open a store at 14th and Franklin avenue next week.

Mr. William Mulenschlager, foreman for the Michel Plant and Bulb Co., was drowned last week while out on a fishing trip. He leaves a widow and three children.

It was a hot night Monday to bowl but the boys were out in full force and we celebrated the birthday of John Young with the usual refreshments. Al. Bauer became a member again. In the three games Beyer was high, 605; Kuehn second, 534; Beneke, 521. High single score was by Beyer, 204; Kuehn, 188; Beneke, 184. We roll again next Monday night. J. J. B.

Montreal.

MONTHLY EXHIBITION OF GARDENERS' AND FLORISTS' CLUB.—EXHIBITS OF DECIDED MERIT.—THE SUCCESSFUL COMPETITORS.

The Gardeners' and Florists' Club held their monthly show September 6. The display of outdoor flowers was creditable considering the dry spell we have had for a couple of weeks. Very few plants were staged, but those that were shown were of very great merit.

Following is a list of the successful competitors: P. McKenna & Son, first prize for six gladioli, three gladioli, 12 helianthus of any other variety than multiflora, with their new dwarf, for 25 helianthus, for bouquet of wild flowers, for plant of tuberous begonia, for 6 pink asters, 6 zinnias, 12 zinnias, 12 Gaillardia grandiflora, 12 Marguerite carnations, 6 spikes of herbaceous phlox; and second prizes for 6 single dahlias, 6 white asters and 12 white asters; third prize for 6 blue asters, 12 blue asters and 12 striped asters.

C. A. Smith, gardener to T. A. Davis, of Lachine, received firsts for 12 single dahlias, 6 double dahlias, collection of Phlox Drummondii, vase of salpiglossis, 12 single petunias, 25 single petunias, 12 double petunias, 12 stocks, 3 cannas and 6 cannas; second prizes for 6 striped asters, 6 zinnias and 6 single dahlias; third prize for 12 zinnias.

George Trussell received first prizes for 25 perennial peas, collection zonal geraniums, 12 pansies, 25 pansies, 12 antirrhinums; second prizes for 6 perennial phlox, 12 single petunias, 25 single petunias, 12 double petunias, 12 blue asters, 12 zinnias, 25 mignonette, 3 gladioli and 6 gladioli; third prizes for 6 red asters and 12 marigolds.

John Walsh received first prizes for 12 pink asters, 12 Rudbeckia Golden Glow and 25 rudbeckias any other variety; second prizes for 12 single dahlias and 12 Helianthus multiflora; third prizes for 6 single dahlias, 12 white asters, 3 gladioli and 6 gladioli, and a special prize for vase of gladioli.

John Dunbar received first prizes for 12 Helianthus multiflora, 25 H. multiflora, 12 red asters, 6 blue asters, 12 blue asters, 12 striped asters, and specials for a vase of delphiniums, a vase of quilled asters and a vase of crown asters.

Joseph Bennett, first prize for 6 white asters, 12 white asters, special for vase of Rudbeckia Golden Glow, a plant of Ficus elastica.

Fred. Bennett first prizes for 6 red asters, 25 mignonette, 25 pansies, 6 blue asters, 12 striped asters and 12 stocks; third prize for 12 pansies, and specials for vase of pompon asters and a vase of Chrysanthemum inodorum plenissima.

J. Pascas received first prize for 25 spikes of sweet peas and second prize for helianthus of any other variety.

Wm. Horobin second prize for 12 spikes of peas; third for 25 sweet peas, 25 pansies, vase of outdoor flowers and special for vase of datura.

Wm. Alcock first for vase of outdoor flowers and special for vase of white asters.

John Stenning second prize for pot of tuberous begonia. Wm. Whiting second for vase of outdoor flowers, and special for vase bougainvillea and vase of scabiosa. T. Martel second for 25 rudbeckia.

Geo. Copland, of McGill Botanic Garden, received specials for pot of gloxinia, vase of penstemon and a vase of African marigold. Robt. Reid received a special prize for a vase of magnicent gladioli. John Holliday a special for vase of allamanda; John Doyle a special for a vase of Tinctoria spicata and vase of cosmos.

The number of people who passed through the hall during the one short hour which it was open to the public (from 9 to 10 p. m.) showed a growing interest in these monthly shows, and it is earnestly hoped that the club may see fit to continue them through the whole year.

BEAVER.

Cleveland.

CLUB MEETING.—NOMINATION OF OFFICERS.—A BOWLING CLUB TALKED OF.—BUSINESS SOMEWHAT BETTER.—HOT WEATHER HAS RETARDED HOUSING OF CARNATIONS.—BUSINESS CHANGE.

The principal business coming before the club meeting last Tuesday evening was in relation to the nomination of officers for the ensuing year. There seemed to be little opposition, as practically the same officials now holding office were indorsed for the coming year. A. Graham Sr., for president; A. Schmitt and William Brinker, first and second vice-presidents respectively; Herman Hart, treasurer; G. H. Tilton and S. N. Pentecost for secretary and assistant secretary, about represent the choice of the members apparently. The election occurs at the next meeting, Tuesday evening, September 28.

The matter of organizing a bowling club also came up for consideration. The committee appointed to examine the alley on the west side made a report speaking favorably of the facilities and incidentally suggested the propriety of examining a ball in connection therewith that is eminently suitable for use as a meeting place instead of the present headquarters. There is an idea that some such facilities for bowling and other amusements in connection with the meetings would tend to increase the attendance. The matter was finally referred to a committee to examine the hall and report at the next meeting, when final action will be taken in regard to moving the headquarters together with a final disposition of the bowling club question.

There is a very strong sentiment in favor of such a club, and whether the change of location of the entire organization is made or not there is little doubt that there will be a bowling club at least. In any event there will be plenty of business at the next meeting and all interested in these matters will at that time have an opportunity to express their views and vote accordingly.

Business has been somewhat better of late though not remarkable in any way. C. Erhardt and A. Graham, Jr. have returned from their vacations and are once more hard at it.

The weather so far during this month has been phenomenal in point of heat and lack of rain. The thermometer has been ranging close to 90° or slightly above continuously, while stock outside is beginning to feel the need of rain. Some of the growers who are ready to get in their carnations, are unable to do so until the unfavorable conditions change.

The F. R. Williams Co. has succeeded the Williams-Wilson Co. and is carrying on the business as heretofore, Mr. Wilson having sold out his interest in the firm and retired. A.

Cincinnati.

CLUB MEETING.—MR. GIESY GETS A JOB.—MONTHLY SHOWS TO BE CONTINUED.—TO FUMIGATE THE KLONDIKE.

The regular monthly meeting of the Cincinnati Florists' Society was held September 11 and called to order by Pres. Gillett. The meeting was fairly well attended, 17 members being present. Two new members were elected and initiated. Mr. Giesy, of the Lockland Lumber Co., in his neat but forcible little speech argued on the point that our members should attend the meetings more regularly, and thereby arouse enthusiasm in our society. He was then given the most pleasant job, namely, to ask and invite those that never find time to attend, and I doubt whether anyone else would fill the position as well as he.

Mr. Giesy spoke very flatteringly about the S. A. F. convention at Providence and was especially well pleased with the treatment at Newport. It was unanimously decided to keep up our monthly shows, and the schedule for the coming year was mapped out with some changes. A committee of three was appointed to have same printed and the secretary instructed to mail a copy to each member. Outside florists wishing a copy may apply to Sec'y Wm. Murphy, Station F, Cincinnati.

Mr. Ed. Hoffmeister's clay pipe got so strong at the club that he was compelled to take up his abode near a window. He says he will take this fumigator along with him to Klondike next spring. He "won't do a thing" to those big mosquitoes there. H. SCHWÄRZ.

August Rolker & Sons.

We are pleased to be able to announce that the creditors of the firm of August Rolker & Sons, New York, have assented to the propositions of the firm and have requested that the Messrs. Rolker continue the business without having it liquidated by the assignee. Messrs. Rolker will remove to quarters down town and hope to be in running order by October 1 with a full line of goods as usual.

Milwaukee.

The warm weather the past week brought out a large supply of nearly all kinds of flowers, while on the other hand it affected the demand. The supply of select and shipping stock is short, but poor and short-stemmed stock found slow sales even at very low figures.

Improvements are being made in some of the down-town retail establishments. Messrs. Currie Bros. are putting in a new front in which stock can be displayed to good advantage. Miss McKenny is also touching up the interior of her store to keep pace with the times.

Archie Middlemas is building two new carnation houses.

Ellis & Pollworth have control of considerable glass which is well stocked with palms and ferns, and in addition to their down-town store they have acquired a near-by store for handling bulbs, etc.

A a recent meeting of the Florists' Club it was decided not to hold a chrysanthemum show, but Mr. A. Klokner volunteered to give a show under the auspices of the club, guaranteeing all premiums and taking upon himself the entire responsibility for the success or failure of the show. INCOG.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

NOTICE.

CHICAGO, September 14, 1897.

We desire to announce to our friends and patrons in the trade that the business heretofore conducted under the name of C. W. McKellar, will on and after the 15th of September be continued under the firm name of Vaughan, McKellar & Winterson, the members of the new firm comprising A. L. Vaughan, Chas. W. McKellar and Ed. F. Winterson. Our long experience in the wholesale cut flower, seed, bulb and supply trade throughout the United States should be sufficient evidence of our ability to handle your wants in the several branches which we have hereinbefore mentioned. We respectfully solicit your kind patronage.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

NEW YORK, SEPTEMBER 14.—F. E. McAllister died at 6 o'clock this morning.

THE STOCK of beans carried over will likely be needed owing to reduced acreage and light yield.

VISITED CHICAGO: C. Madson, W. W. Harnden and W. A. Warner, of Ottman Lithograph Co.; Fred H. Bateman.

MALONE, N. Y.—H. V. R. Foote and D. J. Barnes, who have been conducting the seed business here together have dissolved partnership.

ONION SETS are a fairly good crop in the west. Reds and yellows now ruling in large lots, yellows and reds at $1 to $1 25, whites 25 cents higher.

MR. HOWARD EARL, returning from inspection of Nebraska seed crops for W. Atlee Burpee & Co., reports most crops later than usual, with prospects of shortage of Hubbard squash again this season.

MR. H. A. JOHNS and others have organized the Sioux City Seed and Nursery Co. at Sioux City, Ia. The Sioux City Nursery and Seed Co., by E. S. Weatherly, Mgr., is understood to have made some legal objection to the first mentioned name.

Omaha.

NO CHANGE IN BUSINESS—QUALITY OF STOCK IMPROVING—STATE FAIR PREMIUMS.

Business remains about the same as last report; funeral and wedding orders form the greater portion of the business. The quality of stock is improving but good first-class blooms are scarce. Very few carnations except those from outside; smilax cannot be had at any price.

The exhibits at the state fair this year will consist almost entirely of Omaha stock. Premiums have been cut down and out of town florists are staying at home.

Ben Haas has confined his repairs and improvements to his store alone, which has been raised to a level with the street, and a new walk in front.

J. W. Arnold has returned from his western trip hale and hearty.

A. Donaghue and son spent the fore part of the month out in the hills shooting. G. R. H.

WHITMAN, MASS.—Henry H. Barrows is insolvent. A second meeting of the creditors will be held at Plymouth on September 6.

THE FLORISTS' FERTILIZER.

Made by steam process from pure night-soil (liquid and solid matter), not adulterated with absorbents. Fully matured and combines all the necessary elements for the fertilization of the soil and nutriment of plants. Quick in action. Ground fine and pleasant to handle.

STANDARD FERTILIZER CO.,
1822 Filbert Street, PHILADELPHIA.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Louisville, Ky.

On August 14th Mr. Robert C. Kinkead entertained the Ky. Society of Florists at his "Cabin" near Jacob Park with a watermelon feast, and it was enjoyed very much.

The Ky. Society of Florists held their regular monthly meeting at Mr. H. Kleinstarinks' place in Clifton on September 7, and he did the correct thing for the boys.

Mr. Henry Lichtefeld has just returned home after having a jolly good time in the east. Mr. Lichtefeld's father has had quite a severe spell of sickness, but is now pronounced out of danger. Mr. Lichtefeld's stock is looking fine, especially the carnations.

Mr. T. Rudy has a very fine lot of asters, of which he is proud.

Mr. Wm. Walker's carnations are fine, and he expects to have quite a lot to cut this winter.

Nanz & Neuner have some fine Beauties, La France and Duchess of Albany.

Mr. Wm. Mann has returned from French Lick Springs.

Mr. Kunzman has returned from an eastern trip among the florists. He also took in Atlantic City where he was shooting the chutes. Mr. Kunzman has bought three acres of land which he intends to improve very soon.

FRED. HAUPT, Sec'y Ky. S. of F.

Council Bluffs, Ia.

J. F. Wilcox recently tested the heating apparatus for his new houses and found everything in perfect working order. Two of the new houses have just been planted with carnations.

McPherson & Reed are changing their plant so as to use either hot water or steam. Heretofore they have used steam exclusively.

Mr. and Mrs. Wm. Foster are rejoicing over the arrival of a bright little girl at their home the latter part of August.

G. R. H.

NEW COLEUS.—Mr. Carl Hagenburger, Mentor, O., sends us some thirty or more leaves from his new coleus, Klondike, no two of which are marked alike. The colors are yellow, red and green, in all sorts of peculiar combinations. Mr. Hagenburger writes that he can not find two leaves marked alike. The plant must be very showy.

BEVERLY, MASS.—The floral exhibition under the auspices of the Improvement Society which was held in City Hall on the afternoon of September 2 was one of the most beautiful scenes ever presented here. The decorations of the hall were specially lovely and the attendance was very large, insuring a handsome profit to the society.

ROSES.

Rochester, N. Y.

TEMPERATURE IN THE NINETIES—TRADE DROPPING OFF IN CONSEQUENCE.—WEATHER STOPS HOUSING OF CARNATIONS.—A PICNIC AND CLAMBAKE.

For several days during the past week the thermometer jumped up into the nineties. The heat was extremely uncomfortable for everybody and the sales in cut flowers dropped off suddenly. The week may be set down as a very dull one for all the florists, the demand being decidedly below that of former weeks; excepting a little funeral work now and then, there was hardly anything to do for our retailers. Flowers of all kinds were plenty, quality improving, especially in roses. Carnations are scarce yet in the market, but with so much outdoor stuff the deficiency in the supply is not felt very badly. The hot and dry spell has stopped the growers from housing any more carnations for the present; they are waiting for cooler days, but those already planted in the benches have not apparently suffered yet; most of the early plantings have taken hold in the soil and are growing now in their new quarters. Where violets have been housed early they are now setting buds fast, but the few flowers which open out have suffered from the heat and are small and feeble.

The annual picnic and clambake of the Rochester florists was enjoyed immensely by all participants. In spite of the extremely hot day they were out in full force; gardeners, seedsmen, nurserymen, and all were represented in the jolly crowd. They were out for a good time and they had it in the full sense of the word, keeping it up until late in the night. The prizes for the various contests were awarded as follows: Dick Salter took the prize for the best story, an automatic fishing reel; the yarn will hardly bear repeating here, it is too long, but jovial Dick is willing at any time to recite it over again, perhaps with a few variations appropriate to the surroundings. In pitching quoits the first prize went to E. H. Vick and Charlie Vick; the second was captured by Jenny and Gilmore; both prizes were boxes of cigars. In the shooting contest Mike Barry received first, a silver mounted cane, E. H. Vick got second, a case of old rye, and John Vick third, a barrel of flour. The fat mens' race was won by Fred Schlegel, who got off with a case of beer, and Al. Salter was unanimously proclaimed the best foot ball player, for which he was rewarded with a handsome fur rug. K.

MR. STEPHEN TAPLIN, of Detroit, Mich., has obtained patents in the United States, Canada, England, Germany, Belgium and France on his double action clay and slack burning hot water boiler.

Receiver's Sale!

THE ENTIRE STOCK OF PLANTS OF

PITCHER & MANDA, at Short Hills, N. J.

Will be offered for sale without reserve on **October 4th, 5th, 6th and 7th,** next. The stock consists of over **100.000 PALMS IN SPLENDID CONDITION,** in such standard varieties as **Areca Baueri, Areca lutescens, Cocos Weddeliana, Kentia Belmoreana, Kentia Forsteriana, Latania borbonica, Phœnix reclinata, Livistona rotundifolia, etc., etc. ALSO the finest stock of Adiantum Farleyense ever seen in this country,** and a general assortment of other **Ferns,** as well as a very fine lot of **Ornamental Foliage Plants** containing many choice things not to be found elsewhere.

Together with all the greenhouses, packing sheds, etc., and all the real estate, which will be sold in four distinct parcels as follows:

No. 1. Contains about 10½ acres, on which are located all the greenhouses, about 80,000 feet of glass, all in excellent condition; a good dwelling house, containing eight rooms; stable, store rooms, packing sheds, several hundred sash and frames, etc., etc. This is a specially favorable opportunity to purchase a well established Florist and Nursery business at a greatly reduced price, within three minutes' walk of the railroad station, and eighteen miles from New York City.

No. 2. Contains about 3 acres, with a good dwelling house on it, within 500 feet of the railroad station.

No. 3. Contains about 6½ acres, now used as an Herbaceous Nursery, and is well stocked with the largest and best collection of these plants in the country. Close to railroad station.

No. 4. Contains about 62 acres, well adapted for an excellent Nursery, Farm, or to cut up for building lots. This is situated on the main road between Short Hills and Summit, and one mile from each station.

TRADE INCREASING SLOWLY. — SUPPLY AMPLE — A FINE SHOW OF SUMMER FLOWERS — CARNATIONS LIFTING WELL. — WEATHER VERY HOT.

Trade is increasing slowly and the supply of flowers is fully equal to the demand. Good asters are plentiful, mostly Semple's, and sell as well as anything. A few good carnations are being cut now, also a few roses from newly planted stock. Lange is cutting fine Kaiserins and Hostes. Trade in palms and ferns is starting along moderately in the smaller sizes, nephrolepsis going as well as usual and probably will sell even better than last season.

The horticultural exhibition September 9 taxed the utmost capacity of our spacious hall and a fine showing of summer flowers was made, especially in dahlias and gladioli. Lange showed some good pots of adiantum in six varieties and some fine cattleya spikes.

Notwithstanding the wretched season we experienced carnations are lifting well and of fairly good size, although some growers who planted on low land lost a very large percentage. According to the outlook now there will be a shortage in white. The weather has been very hot this last week and has delayed us considerably in housing our carnations.

Chrysanthemums are looking very fine and more than ever have been benched, the increase being mostly in the earlier varieties. Violets have done fairly well in some sections and not so well in others but in all probability more plants will be benched than last year. Repairing is occupying a good deal of time just now, as usual, and you never know how much there is until you get at it. We need rain for the first time this summer. A. H. L.

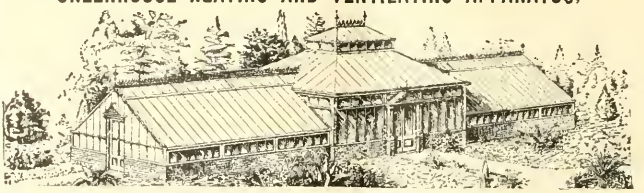
JOAQUIN MILLER writes from Dawson City, Alaska: "A greenhouse would be a big fortune, and surely there is a good chance for one here."



Hitchings & Co.

ESTABLISHED 50 YEARS.

HORTICULTURAL ARCHITECTS AND BUILDERS

AND LARGEST MANUFACTURERS OF

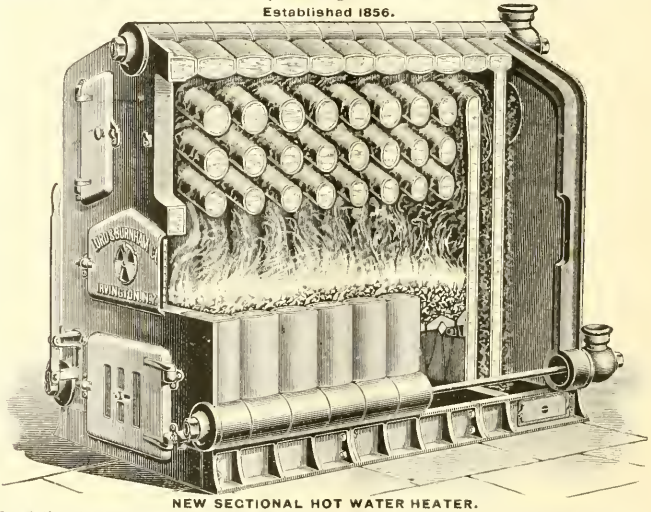
GREENHOUSE HEATING AND VENTILATING APPARATUS.

THE HIGHEST AWARDS RECEIVED AT THE THE WORLD'S FAIR FOR HORTICULTURAL ARCHITECTURE, GREENHOUSE CONSTRUCTION AND HEATING APPARATUS.

Conservatories, Greenhouses, Palm Houses, etc., erected complete, with our patent Iron Frame Construction. Send four cents postage for illustrated catalogue.

233 Mercer Street, NEW YORK.

When writing mention American Florist.



LORD & BURNHAM CO.,

HORTICULTURAL ARCHITECTS AND BUILDERS,

AND MANUFACTURERS OF HEATING AND VENTILATING APPARATUS.

Plans and estimates furnished on application for heating and ventilating apparatus erected complete, or for material only. Highest awards at the World's Fair.

Established 1856.

NEW SECTIONAL HOT WATER HEATER.

Specially adapted to large ranges. Will heat up to 16,500 feet of glass. Highest economy. Moderate cost. Also Heaters for smaller work. Send 6 cts. postage to New York Office for latest catalogue of heating and ventilating apparatus

NEW YORK OFFICE.
160 FIFTH AVE., cor. 21st St.

GENERAL OFFICE AND WORKS,
IRVINGTON-ON-HUDSON, N. Y.

When writing mention American Florist.

Spence Durability.

"It is generally admitted that cast iron boilers are more durable than those in whole or in part of wrought iron, and on this account they would generally be preferable, as greenhouse heaters."—*L. R. Taft in Florists' Exchange.*

THE "SPENCE" HOT WATER HEATER is made of cast iron. Is cast from a most carefully mixed combination of ores, producing an iron of great tenacity. It will outwear a wrought iron heater. It cannot rust out, no matter how damp the house be. *Catalogue free.*

American Boiler Company 84 Lake St, CHICAGO. 94 Centre St., NEW YORK.

THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas."

NEW BEDFORD, MASS.—Jahn Bros. have purchased the store of A. B. Hathaway at 60 Pleasant street. J. H. Cleary has been retained as manager.

THE U. S. Department of Agriculture at Washington has issued Farmers' Bulletin No. 58, which treats of "The soy bean as a forage crop." The subject is very fully covered and there are several illustrations. A copy can be had free on application to the Secretary of Agriculture, Washington, D. C.

Carnation Notes.

We have had rather strange weather for the last two or three weeks. For two weeks the thermometer hovered near 100° in the shade every day, but the nights were comparatively cool. On September 16 we had a three minutes rain, enough to lay the dust for a few hours, but not enough to break the drought of nearly eight weeks duration. This was followed up with three nights light frost. The hot spell is broken, but not yet the drought. With the carnation grower the natural question arises: what effect has such weather on the carnation plants. I have come more than ever to the conclusion that I would rather contend with dry weather than with too much rain.

Much can be done to counteract a dry season without resorting to watering, which I condemn unless the most direct necessity, by a system of cultivation to keep the top soil loose and mellow; but what can we do in time of too much rain? Wherever we touch a thing it is harmful. The water soaked earth is of less consequence than the great humidity in the atmosphere, a condition which all diseases that the carnation is heir to find most congenial. Such a condition existed last year shortly before planting time, and I had my hands full fighting spot and other diseases. This year after a dry season and lately very dry and hot weather I find my plants not quite so large but still large enough, and in a much more healthy condition. There is no sign of spot and very little bacteria, and undoubtedly it has the same effect on rust.

It is wonderful how much dryness a carnation plant can stand, and how beneficial a dry atmosphere is to its health, while a moisture laden one carries disease. The plants will not make such a rapid growth, but it has a tendency to mature them and force them into bloom. I am astonished to see among my seedlings varieties that were very late to bloom last year, budding out in the field with great freedom. This all shows plain enough under what conditions plants remain the healthiest and how we can profit by it in our culture under glass.

Under glass, where it is in our power to avoid the extremes we so often have to contend with in the outdoor culture, we can bring conditions favorable for their growth more in conjunction with each other. We can supply moisture to the soil without giving much to the atmosphere. If the atmosphere is too humid, ventilation, and if advisable a little fire heat, will soon disperse the moisture and make the air lighter. We learn from the field culture that a dry atmosphere will keep the plants healthy, and a moist soil will make them grow. Now we can combine this readily in the house, a condition we do not always enjoy in the field.

As soon as our plants are fully established on the benches we cease watering overhead, and try to keep the foliage dry by only watering the soil; the evaporation from the soil supplies more than enough moisture to the air, and consequently to the leaves. There is absolutely no necessity for syringing. This is a theme I have often harped on, but I believe it bears mentioning again, for in my opinion much trouble can be avoided by following this advice. If we could as readily control light and sunshine as we can temperature, moisture, and airiness, our winter culture would be perfection, but we can only turn to the best advantage what we receive by the location and style of houses.

I repeat again, now is the time when much disease and trouble can be averted by thoroughly cleaning the plants when brought from the field and on the bench as long as they are small and can be easily looked over. There may be a leaf affected with spot that when removed and destroyed may leave the plant entirely clean, and prevent further spread for we must not forget that the houses when just planted, and kept moist and shaded, are in just the right condition to spread a disease very rapidly. It is the same with rust; that in the field, especially in dry weather, finds little encouragement to grow, and when well cleaned of the affected leaves, and all fresh outbreaks removed as long as the plant can easily be looked over, the disease, even if not fully eradicated, can at least be considerably checked and much annoyance averted. Vigilance and carefulness exercised now will do more good than all the spraying and application of fungicides afterwards. FRED. DORNER.

Wood Lice on Carnations.

Replying to T. Davis, Ill., who requests me to furnish the formula for destroying wood lice with Paris green, would say that we simply take a quantity of ordinary sugar, as much as we may require at the time, and mix through it thoroughly sufficient dry Paris green to color every particle. I have never measured it, but I think an ordinary 25-cent box of Paris green, such as is retailed by all country grocers, would be enough for 10 pounds of sugar, and this latter would be sufficient to distribute through 100,000 feet of glass. We take and sprinkle a little on the side boards of all the benches late in the afternoon, and as a rule two doses will clean out the wood lice entirely. ROBT. SIMPSON.

Black Spot on Beauty.

Please let me know a remedy for black spot on American Beauty. K. N.

Practically all experienced growers agree that it is much easier and far better to prevent black spot on roses than to cure it once it has a foothold. It is generally conceded that its presence is the direct result of improper treatment, and especially of unsuitable atmospheric conditions. In combating any disease whether of the animal or vegetable kingdom it is essential as far as possible to understand the cause and origin as well as the nature of the disease itself, after which a remedy very often suggests itself. I have found that poor judgment in watering, sometimes having the benches too dry, and at other times entirely too wet, turning on the hose every morning regardless of the condition of the weather, with the result that the foliage is sometimes wet for 24 hours; lack of perfect ventilation which means a thorough circulation of air through the houses every day; a cold, damp heavy and stagnant atmosphere at night; a poor roof which lets in water everytime it rains, and a poorly drained floor, are all prolific causes of mildew and black spot.

Granted that the above is correct our first efforts in fighting the disease, whether by way of prevention or cure, should be in the direction of removing the cause; so I would suggest to K. N. that he maintain a little fire heat every night from now on (unless very warm), leave the ventilators slightly ajar to keep the air sweet and pure, syringe the foliage only on bright days early in the day, and not oftener than twice or three times a week, keep the soil in an even moist state, in watering avoid wetting the floor as much as possible, give as much air during the day as weather conditions will permit, if the roof is leaky repair it without delay, and in addition go over the plants once a week, pick off the spotted foliage and burn it, and stir the surface of the soil. A clean house and pure air are the best antidote for black spot.

In case the disease has become very bad I would suggest a weekly spraying with the solution of ammonia and carbonate of copper. The formula I have adopted for mixing the solution is as follows: To 3 ounces of pulverized copper pour water sufficient to form a thin paste, then add one quart of ammonia (strength fifi). After standing 12 hours the copper will be dissolved when it is ready for use; one-quarter pint to three gallons of water is the proper strength. ROB'T SIMPSON.

Miscellaneous Seasonable Hints.

There is scarcely a month of the whole year when good gardening is more needed than just now. There are the roses to be kept clear of mildew, the 'mums to be continually worked at, bulbs to be boxed, cuttings of all kinds to be put in, and above all a judicious and sensible use of the fire, and the greatest attention to ventilation. When real winter comes it is a sort of routine work, but now and for weeks to come it is a tax on your intelligence. Frosts have made their appearance in many parts of the country and in some localities at least 1,500 miles south of Dawson City.

EARLY TULIPS AND VON SION.

If you desire early tulips and Von Sion, you should box a third of your lot as soon as received. Any old soil is good enough to grow tulips and hyacinths, providing it is not too heavy; a light loam is better in every way. I often notice tulips planted in a flat 3 or 4 inches apart; if these people forced many thousands they would soon find out that they could not afford to do that; you can put the bulbs almost touching and the flowers will be just as fine. A box 2 feet long, 12 inches broad and 3 inches deep will hold 72 La Reine or Yellow Prince, and about 50 Von Sion narcissus. Water thoroughly and place out of doors. I like to put a few strips of wood on the ground under the boxes and after the water is soaked into the soil throw over the surface a very thin covering of the buckwheat husks, only enough to hide the soil; this is done so that the 2 or 3 inches of soil with which you cover the boxes will break away clean from the soil in the flats. If you cover with tan bark or sawdust this thin covering of buckwheat would be entirely unnecessary. Two, or at least three, inches of soil is covering enough till very severe weather comes. When hard freezing approaches cover the beds with 6 or 7 inches of straw manure. I usually make the beds of bulbs, or rather boxes of bulbs, 6 feet wide, and the beds 6 feet apart, and digging out 4 or 5 inches of earth between beds is just covering enough for the bulbs.

WATERING BULBS.

The question is often asked about watering bulbs outside. Now any person of reasonable intelligence should solve this question himself. If three inches of earth in a box is well saturated and then covered with three inches of dry earth you know that it will keep moist for a long time, and more likely because it is the months of October and November, when rains are expected and the solar rays are not so "extracting." But if we don't get a good rain once a week then the beds had better be soaked occasionally. If too dry the root growth will be slow. To finish this chapter on bulbs let me say that you will have no success with forcing tulips, etc., if they are not well rooted, so get some in the boxes at once.

DUTCH HYACINTHS.

Dutch hyacinths for growing in pots I prefer to place in a frame so that in addition to the covering of soil and litter I can cover with glass or boards. We are certain that freezing does not hurt them because they are planted in the open ground for spring display and are frozen tight for many weeks during winter, but if allowed to freeze in a 4-inch pot you are very likely to lose a great many pots and have a most awkward job when bringing in a hundred for your week's supply.

TULIPS FOR FORCING.

Simply for the benefit of the beginners I will say that the tulips which force best, give fine flowers, and can be purchased at reasonable cost, are La Reine, white, and under certain treatment a most lovely pink; Pottebaker, white, very fine but much more expensive; Yellow Prince, the finest of yellow tulips; Chrysolora, a fine rich yellow and with me proved a rather better forcer for the first crop than Yellow Prince. Duc Van Thol is doubtless the earliest of all but when forced for Christmas they are poor little things and people can get along without them; Vermillion Brilliant is the earliest of all scarlet or red tulips and a most handsome flower but not cheap in price, yet it is the one to grow; for a later scarlet, Waterloo, more often known as La Belle Alliance, is good enough, but not nearly so beautiful either in form or color as Vermillion Brilliant.

For an early pink, La Reine, which is classed as a white but assumes a lovely pink if put into a cold house after being fully developed, will fill the bill, and later you can bring in Rose Grisdelin, a true pink. Cottage Maid is the best of all pinks, but expensive, and too often the bulbs supplied will throw no flowers. Kaizer Kroon, the showy red and yellow, should be grown sparingly; it is a grand tulip for a flower bed but drops its petals too quickly when forced under glass. Joost Van Vondel is a fine large striped flower, but mixed colors in tulips don't go. Of all the double tulips there is none of so much value to the florist as Murillo, which the Dutchmen call a pink; it has a faint tinge of pink but is nearer a white. It is of wonderful excellence and a big lot should always be planted, for it is the best of all for Easter. Don't try to get tulips in for Christmas; if you have them by end of January they will be good and sell, but get them all boxed at once.

RUST ON CHRYSANTHEMUMS.

I am sorry to say that the chrysanthemum rust has made its appearance in our locality. Golden Wedding, H. W. Reiman and Yellow Queen are showing it worst. From the way it has struck us this year I can attribute no cause for it, for it has appeared under very different conditions; to say it is shade or want of ventilation won't go this year. From an excellent authority I am told that last year a bench of plants which were attacked with the rust were saved by the use of Bordeaux mixture in the liquid form. You cannot save the leaves that are already rusted, or rather you cannot bring them back to health, but if you can stop the fungus from spreading you will be well rewarded.

MISCELLANEOUS PLANTS.

It is time now that your earliest Bermuda lilies were in the greenhouse. Give them a good light bench where you have some fire heat cool nights and you will have them in flower by December 1. Don't get caught with a frost. Cyclamens, cinerarias and other plants in cold frames should be covered with glass on cool nights or whenever there is any danger of frost. Calla lilies should be indoors in a warm light house. Stevia serratifolia, which we still grow, should be kept out as late as possible but in such shape that you could rush them in at any time.

There is no excuse for your being without stock of all common bedding plants now, for a few cuttings of each should be in the sand. Of some you need but few, of others more, and some are better treated by lifting a few old plants, lobelia, ageratum and salvia among the latter; they propagate so fast that a few old plants lifted and kept till the new year will give you all the stock you can take care of. You can lift and pot Hydrangea Otaksa at once but keep them out of doors; a few degrees of frost will do them good; it will ripen the wood and better prepare them for forcing; unless a heavy frost comes suddenly they are better out of doors till November 1. WM. SCOTT.

ANNUAL DINNER OF THE NEW YORK GARDENERS' SOCIETY AT GRAND CENTRAL PALACE, NEW YORK, SEPT. 10.

Water Lily Flowers.

We have a nice collection of water lilies and would like to use some of them in floral designs, but they close up so quickly they are not available. We have heard that the petals can be bent or broken back so that they will not close again but we don't get the right way of it. How is it done? J.

The cut flowers of water lilies open and close periodically. How to prevent them from closing after once open has occupied the attention of florists in this and other countries with varied results. Chemical, electrical and thermal mediums have been used to obtain the desired result. Mr. Geo. Harster, of Speyer, Germany, claims to have solved the problem, and as long ago as November 11, 1893, applied for a patent in the United States, which was allowed February 17, 1894, for "a method or process for preventing the closing of cut flowers of the order nymphæacea". By this process Mr. Harster claims that the flowers are not only kept open but retain their form, color and fragrance, are in no way spoi'ed, that they can be used as the most prominent flowers in any wreath or set piece and will last from five to eight days, and even a fortnight in winter. He compares the process to the local influence of cocaine, which as we all know makes parts of the body entirely insensible to any irritation; he does not say it is cocaine but a certain metallic solution that is introduced into the flower. It is said to be very simple and easily applied.

We have endeavored to secure a sample for trial and samples have been promised but they never materialized. Mr. Harster is anxious to sell this patent, or the right to use the same in America, and I have no doubt if any person exhibited a willingness to purchase this patent for the United States he might secure the same for himself exclusively. Whether this is feasible or not I must leave to Mr. J.

What is enough to make one feel chagrined over is the fact that a foreigner has closed the door to the home market by the above patent referred to.

WM. TRICKER.

Mealy Bug Again.

From Mankato, Minn., comes the question: "Would you please inform us how to kill mealy bug. We have them on "umbrella plants."

By umbrella plant is doubtless meant cyperus. As this plant will stand any amount of syringing they can be laid down on the path and given a thorough application of the hose. Most all stock can and should be kept clean of mealy bug by sensible use of the hose. If on palms, cycads or other valuable plants and too great a crop to be dislodged by syringing, use fir tree oil; it can be purchased of all seed houses with directions for use and is sure death to the bugs; or kerosene emulsion will answer as well.

WM. SCOTT.

Flea-Like Thrip.

From "M. W." comes the following: "Can you tell me what will destroy the flea-like thrip which are spoken of under carnation notes in the FLORIST of September 4. They are on my smilax and would like to know how to get rid of them."

Most likely when thrip was spoken of by Mr. Dorner it was not thrip at all that was meant. It is possible that thrip may infest carnations but I have never seen it. There is a small, very minute, lively little creature that troubles carnations in the field in dry seasons. I only know it under the name of the "Carnation twitter." Some 20 years ago it almost destroyed a large lot of Edwardsii carnations but when cooler weather and rains came it disappeared. This twitter is I believe quite distinct from thrip.

Thrip troubles many plants of a widely different nature. It is bad on asters under glass in the hot months and as is well known is very troublesome to azaleas. It delights in a hot dry climate. If you will keep the smilax well syringed twice a day the thrip will make little headway, and on the next crop won't appear if syringing isn't neglected. Don't stand off six feet with your back up against the wall or bench and let the water fall on the smilax as if you were putting out the last embers of an election fire, but get your "hose hand" away at the bottom and remember it is on the under side of the leaf that all these pests have their good time. WM. SCOTT.

Tempering Water.

Could we warm our water for syringing by turning a steam jet into the main from the same boiler used for pumping? Or would we have to have the steam from another boiler with more force than the one used to run the pump? Would the plan force too much air into the water? J.

Replying to your correspondent J. would say that I am inclined to think he would find a steam jet inserted into the water main which is to supply his house with the same, troublesome. I rather think he would have a difficulty in keeping an even temperature in the water, unless he is absolutely sure he can control a steady jet of steam flowing into the water. If the boiler which is to supply his steam pump is capable of keeping up sufficient steam to admit of his inserting a jet of steam into the water main, I do not think there would be any difficulty in doing it that way, but my impression is

that he had better have a considerably larger pipe, say 10 or 15 feet either side of where the steam jet enters the same; this will allow some for expansion. A pressure of 10 or 12 pounds of steam would probably give him all that would be necessary to force a small jet of steam into the water, providing he does not use a very high pressure on his pump, but, I would suppose that he would require about the same pressure to force the steam into the water as he would to force the pump in action. Without knowing the pressure of steam he uses on his force pump, I am unable to give him clear figures but I would advise him to use only a very small jet of steam, otherwise he may get the water considerably too warm. A quarter-inch jet of steam would raise the temperature of his water all that would be necessary, providing the same can be kept steady.

JOHN N. MAY.

New York.

PLENTY OF FLOWERS BUT NO BUYERS.—WAITING FOR COOLER WEATHER.—BULB ORDERS HEAVY.—DAMAGES FOR ANTON SCHNELL — AMERICAN INSTITUTE FAIR NEXT WEEK.—W. C. WILSON ILL.

Business remains stationary. Large quantities of flowers are being loaded on the market every morning and the only way they can be unloaded is in bulk at thousand rates which are about the same figure as quoted by hundreds. A hundred roses for two dollars or a thousand for two dollars, according to the way one buys. It is all the same in the end for the grower as there is only about so much money spent anyhow, and there are ten times as many flowers as are wanted at any price. Much of the rose stock is yet small, showing that it has been cut from young plants and that it would have been better left on the plants, as per Robert Simpson's advice in a recent article. Asters are beginning to wane and will leave a good and profitable field for the carnation men for a while. Violets are showing up all around and while they are of the usual inferior quality of first crop flowers yet there are indications that they are wanted and fair returns may be expected. Every one is waiting with all possible patience for cooler weather and hoping that this when it comes, will inaugurate a welcome revival all along the line.

Dealers report heavy bulb orders, notwithstanding duty, which would seem to indicate that bulb forcing will be carried on about as usual this coming season. The duty means a heavy drain on the dealers' bank accounts, and the extra cash outlay makes extra watchfulness necessary in accepting and filling orders for these goods.

Some land leased by Anton Schnell, at College Point, has been sold to the town as a location for a new school house. Mr. Schnell made a claim for loss on a field of violets and A. Schultheis and F. Zimmerman were selected to appraise damages. Their award, $351, was considered excessive and there is prospect of a suit over the matter.

The American Institute Fair opens in Madison Square Garden next week. Liberal prizes are offered in the horticultural classes.

Mr. W. C. Wilson, the veteran plantsman, is quite sick at Woodside.

Visiting New York: E. G. Hill, Richmond, Ind.

August Rolker & Sons have rented the store and basement at 52 Dey street and will be ready for business October 1. There is an abundance of loft room for general storage in the neighborhood. The Messrs. Rolker did a prosperous business at 44 Dey street for many years.

John Young is receiving some nice chrysanthemums, M. de Montmort, the first of the season.

Boston.

BUSINESS DULL, BUT PROSPECTS ENCOURAGING —SHOW OF ASTERS AT HORTICULTURAL HALL.—EXHIBITION AT READING.—BIG PLANT SALE.—VISITORS.

Reports from all sources indicate a flower trade much below the average for September and not as good as the August showing. This is generally accepted as resulting from local causes, however, and a spirit of hopefulness and confidence in the coming season seems to exist, and the situation is regarded with a cheerfulness that has rarely been shown in recent years. Unless good judges are greatly mistaken there will be a good season for the flower trade after the ball gets started, and it only requires a touch of severe weather to drive customers back to the city, where they will find things all ready for them in the line of choice stock. The increase in commercial glass houses in the vicinity of Boston this season has been inconsiderable and a healthy market will without doubt be found for good material in roses, carnations and violets at least.

Saturday, September 18, was the day for the regular fall show of perennial asters at Horticultural Hall. The display of these pretty and popular flowers was very large, and the number of varieties shown seems to increase every year. The hall was crowded during the three hours the exhibition lasted. In addition to the asters there was a superb display of ornamental fruited trees and shrubs, cut branches, from Jackson Dawson, of the Arnold Arboretum, which was the finest collection ever shown here, and attracted great attention.

The first annual exhibition of the Reading Amateur Gardeners' Association was held on the afternoon and evening of September 14 and was a most successful affair. The hall was elaborately decorated and the display of plants, flowers and fruit was very large. F. W. Hatch, Chas. Ingram and Martin Cummings were the judges.

Alfred Bunyard, formerly fern grower for Pitcher & Manda, Short Hills, has taken a position with W. W. Edgar, Waverly.

A large number of florists from New England points are in town attending Ed. Hatch's big plant sale at Horticultural Hall.

Visiting Boston: Winfried Rolker and A. T. Boddington, New York City; R. Dreyer, Woodside, N. Y.; Alfred Dimmock, St. Albans, England; Wm. Duckham, Madison, N. J.

Annual election of the Mass. Horticultural Society will take place on Saturday, October 2.

Mr. Robert Cameron, of the Botanic Garden, has gone to Washington to visit Mr. W. R. Smith.

Buffalo.

DEMAND INCREASES.—HERBACEOUS FLOWERS NOT PROFITABLE.—FIRST VIOLETS.—CARNATIONS —PREVENTION OF RUST.—FIFTY MILLION A YEAR —ACCIDENT TO MR. WASSON —BRIEF ITEMS.

This has not been a week of wonderful business revival but as cold weather and the natural decay of garden flowers is at hand the demand on the greenhouse increases. There was a belief a few years ago among some of the enlightened florists that a good field of herbaceous plants would be a source of profit, but that illusion is vanished. Field flowers are no longer a profitable article and the best of them have not paid express charges by rail. Every old woman cultivates a few flowers in her garden and the face of nature is embellished with flora's offerings. When every neglected wayside offers to universal admiration the perfect but "unimproved" gems of nature's flora, who will look at or pay much for our cultivated asters, phlox or gladiolus? There is another reason far more potent than the foregoing for a poor demand in summer, it is that when you have plenty or a surfeit of a thing you look for a change or something that is rare or out of season, and in no country is this more true than this U. S. If our patrons could have American Beauties all the year round at $1 per dozen they would soon tire of them and would readily pay $3 per dozen for Pres. Carnot, simply because it was new. But American Beauty is not plentiful and when John Burton and Ed. Lonsdale get nine dollars per dozen for them they are in great demand. There is going to be a great demand this winter for palms for the house, or rather the drawing room. I feel it already. Have you noticed in all our illustrated papers, whenever a comic picture was copied from an European paper there was always a palm in the scene; so our people are getting to understand that in all well regulated homes you must have a palm. God bless the palm, and let it be sent C. O. D., and never returned for repairs.

W. J. Palmer & Son are the first in town with violets, having sent in a good many hundred a day. Other people have violets but they think it would be better to pluck and throw them away for another few weeks.

Thomas Webb, of Corfu, has a big bunch of his new scarlet carnation and it is most promising, and yet it is not as good as Jubilee. Strange to say Jubilee, that was last year the most infernally rust affected of all carnations, shows this year but little or no signs of rust, and that can be said of several other varieties. That yet uncqualled carnation, Daybreak, which has always been the most susceptible to rust, appears this year largely free of it. Depend upon it if you take off healthy cuttings and dip those cuttings in a solution of copper, either the Bordeaux mixture or ammoniacal, you are going a long ways towards propagating a clean stock. The close planting and neglect of some carnation growers is enough to produce a disease far worse than rust. It is liable to produce "Dianthus starvatum klondicus," which up to date is one of the worst maladies that either the vegetable or animal kingdom is heir to.

Mr. Mott was here, but as your correspondent was harvesting a second crop of clover he missed him. How different Mott is from the first day we saw him when he was glad of a twenty dollar order. He is now so fat and prosperous that he should no longer do any real work; he should simply be sent round the country to let us know that his actual selling agents will be along in a few days and will have time to talk to us, and incidentally take our order. Mr. Rockefeller's income is fifty million a year, and the colored troops fought nobly.

We are sorry indeed to have to report an accident to Mr. E. A. Wasson, fore-

NORMAL SCHOOL GARDENS, TORONTO.

man for Wm. D. Newlands. Mr. W. was loaded (not he but the wagon) with crates of pots and on his journey home, taking more interest in the pots than his own welfare, he fell off and fractured a shoulder bone; which bone is not certain, and all who have carved a shoulder of mutton knows it's somewhat complicated. Mr. Wasson is going round attending to business but handicapped for work by the temporary stationary position of his left wing.

Brief items: James Buxton says he ordered 50 tons.

William Belsey was pressed to run for alderman of the 23d ward but declined.

W. A. Adams says you can't always tell by looking at a man how fast he can ride.

W. F. Kasting: "I do my best, but its hard work, boys, to please both shipper and buyer."

G. Sebastian Pickleman: "We are going to handle nothing but first-class goods this winter and we want your patronage. W. S.

Normal School Gardens, Toronto.

We present in this issue two views in the Normal School Gardens, Toronto, Ont., which are in charge of Mr. A. H. Ewing. The photographs do not do the bedding justice, the views being too general to show much detail, but all will undoubtedly be interested in these glimpses of the grounds presided over by Mr. Ewing, whose Toronto notes in these columns have been so bright and interesting.

Washington, D. C.

MOVE AGAINST GOVERNMENT COMPETITION.

A called meeting of the Washington florists was held last Thursday night at the Hotel Johnson for the purpose of considering the matter of the distribution of plants and cut flowers by the government institutions. Mr. J. R. Freeman issued the call and occupied the chair. Those present were Messrs. Wm. F. Gude, Adolph Gude, J. Louis Loose, Nicholas Studer, Albert Esch, Robert Bowdler, Chas. F. Hale and John H. Shine. They claim they have long suffered from the competition of the several government departments where plants and flowers are grown for beautifying the various parks and reservations, claiming it has for years been the practice of the departments to distribute cut flowers free to members of congress, senators and other high officials, and on their order to their relations and friends, and of recent years they have added new houses for the purpose of growing roses, carnations and other flowers usually grown by the florists, thereby increasing the output of free cut flowers "enormously," and with corresponding detriment to the business of the local florists.

It was claimed by those present at the meeting that it was a frequent occurrence for the ladies, the wives or relatives of members or senators to order of them potted plants, such as the department greenhouse never sends out, and then make a contingent bargain about cut flowers, saying that they did not know what cut flowers they would need until they saw what they got from the public garden.

The florists also had much to say in regard to the appearance of the public gardens and grounds, claiming that "were the sums annually expended in cultivating expensive cut flowers to be given away devoted to the use intended by law, and only such plants and cut flowers cultivated as would be suited for the ornamentation of public parks, the government reservations in Washington "would be the handsomest in the world." They further criticised the idea that the government greenhouses grew flowers for the decoration of the White House on the occasion of public receptions and other occasions of state, stating that "any of them would supply the decorations for a dozen or more of such functions that take place in winter for one-tenth of the cost of maintaining the specially designed hothouses and other expenses of labor and stock annually assessed against the appropriations for supplying these decorations."

The Reform School and the Industrial Home School were also complained of, claiming "the former makes a specialty of raising Easter lilies and offers them at one-half the price the florist who sells them for a living can do," and that at the last named establishment potted plants are raised and daily put on the market in the hands of boys who receive 10% of the proceeds of the sale of these plants. The fact was developed at the meeting that the gift of a single flower to anybody by the superintendent of public buildings and grounds is a direct violation of a United States statute.

The first move in the direction of securing reform in this matter was in the form of letters addressed to the superintendent of public buildings and grounds and to the superintendent of charities, which read as follows:

TO THE SUPERINTENDENT OF PUBLIC BUILDINGS AND GROUNDS: We, the undersigned florists of the District of Columbia, at a special meeting called for the purpose, most respectfully protest against the present system of free distribution by your department of cut flowers and other products of the propagating gardens situated in the Monument Grounds. We look upon such distribution as illegal, in addition to being a source of great injury to our business, and we are hopeful of finding some way of stopping the practice. We hope the calling of your attention to this matter will be sufficient to justify you in taking strict measures toward the desired result.

TO THE SUPERINTENDENT OF CHARITIES: We, the undersigned florists of the District of Columbia, most respectfully protest against the present practice of the Reform School and Industrial Home School in offering plants and blooms for sale in the open market in direct competition with us, and to the great detriment of our business. If it is not deemed advisable to discontinue the production of plants and flowers, then we respectfully suggest that the plants produced at these institutions be utilized for the purpose of beautifying the grounds surrounding public schools, engine houses, police stations, hospitals, and other district institutions, which instead of being a detriment to our business, would tend to educate school children and others in the love for plants and flowers, and thereby create a legitimate demand for such products. Trusting you

will take such action as will relieve us from our present strain, we remain, etc.

The signers of these letters were: J R. Freeman, chairman; W. F. Gude, J. Louis Loose, N. Studer, Albert Esch, Robert Bowdler, A. Gude, C. F. Hale and John H. Shine.

The meeting agreed to await reply to these communications before taking further steps, but in the event it was found necessary to protect themselves, it was freely stated that a resort to law would be had and an injunction asked to prevent the violation of the explicit statute in this regard by the officers above mentioned. The law in question was approved June 20, 1878, and reads as follows:

Provided, That hereafter only such trees, shrubs and plants shall be propagated at the greenhouses and nursery as are suitable for planting in the public reservations, to which purpose only the products of the greenhouses and nursery shall be applied.

REYNOLDS.

Philadelphia.

COOL WEATHER ARRIVES —SUPPLY SHORTENED — PRICES STIFFENING. — A GREEN FEVER.—CHEAP POTS —BASEBALL AND SHOOTING. — VISITORS. — JACOB EISELE RETURNS.—MEETING OF HORT. SOCIETY.

Summer has surely gone; the thermometer has dropped as low as 44° several nights the past week and things have taken on a different look. Although the night fireman has not as yet been engaged there are few places that are not now using artificial heat.

The cool weather has shortened up the crops, in roses particularly, and prices will soon take a jump, in fact even now the best teas bring $5. Beauties are scarce and so tight; some growers seem to use very little judgment, cutting them at least two days too soon. It is very annoying to a dealer to show nice roses one day to a customer and have to send them tight buds the next. Carnations are getting better and the variety greater. Asters are about done.

Mums are said to be in sight, coming slowly round the curve, as it were. Mr. Harris says that there is not much in early chrysanthemums unless there should happen to be but a few about, as the demand while it may seem great at times, is light, and as soon as the better ones come in the early kinds will not sell at all.

Prices of flowers are as follows: Beauties 75 cents to $2 per dozen, teas $2 to $5 per hundred, carnations 50 to 75 cents a hundred, valley $3 to $4 ,asters 40 to 50 cents per hundred flowers, smilax 10 to 20 cents per string, adiantum 50 to 75 cents per hundred. Tuberoses, fine spikes, $2 to $2.50 per hundred. John Westcott says that 25 cents per pip used to be the retail price for the tuberose and that he has often paid $10 per hundred pips. Well, perhaps some of the growers, the up-to-date fellows of to-day, wouldn't like to sell out at these figures.

Fevers are contagious, they break out all at once. The green fever has struck us and hit hard. Half the plant stands and pot covers of the town are covered with various shades of green and one of the 11th street boys has been doing up his store with the same shade, ice box, wood work, everything, green. It's a good color for the baskets and stands and it seems singular that it should not have been used before this late day. One of the supply houses has even dyed the stemming sticks a shade of plant green and we suppose green wire will follow.

The potters of this vicinity are having a great time with their price lists. It seems that some other fellows want to get in and they keep settling down and down so that there won't be the smallest kind of a crack for the outsiders to get their wedge in. Here is the latest level: 4½-inch, $7.75 per thousand; 4½ inch, $9; 5-inch, $11.75; 7-inch, $29; 8-inch, $49 and 5% off for cash. This is from prices that were already considered too low.

The Chestnut Hill and Germantown florists, the one clan by the way thinking themselves much more aristocratic than the other, though for the life of us we can't see any difference, met last Monday to try their skill at baseball and shooting blue rocks. The contests took place in Germantown, and whether it was because they were on their own grounds or really were better at handling the bat and the gun, we are unable to say, but we cheerfully state the fact that the Germantowners won and we can just say on the Q. T. that the other fellows were awfully surprised. The result of the gun contest particularly annoyed them as they belong to the crow faction, the black crow, and thought themselves invincible. They are going to meet in a ten pin match at the Florists' Club rooms next Tuesday night and Chestnut Hill expects great things then. The base ball team won by a score of 14 to 12 and the gunners with 96 to 95 out of 150 targets, six men on each side. The Chestnut Hill boys said after the matches: "Well you had no walk-over; you had to do your best to beat us."

Wm. Bertermann, of Indianapolis, stopped on his way home from Europe and took a look at our Willow Grove park, a beautiful place laid out by one of the street railway companies. Jacob Eisele, of Dreer's, arrived last Thursday looking much better for his European trip. George Stumpp of New York also paid a flying visit.

The meeting of the Horticultural Society was held last Tuesday evening in the library as the dahlia society was using the lecture room. Six new members were elected. The H. M. Michell prize for asters was won by Chas. Leisy, of Germantown; his vase made a fine show, consisting of fifty fine branches.

An exhibit of strawberry plants in fruit was a surprise; they are of the perpetual bearing type, bearing at intervals from June until October; they were exhibited by Joseph Hurley. Dr. Mueller, of Cornell University, was present. K.

American Dahlia Society.

The second annual show of the American Dahlia Society was held in Philadelphia Horticultural Hall, last Tuesday and Wednesday, and it can be said that in every way it was a success and a credit to the young society. Not only were the exhibits finer and larger than last year but the appreciation of the public was shown in the increased attendance, which was much larger than in 1896.

Of course by far the largest display was made by Mr. Peacock of Atco, N. J., the exhibit filling two long tables, nearly five hundred vases in all, among the striking kinds of which there were large vases of C. W. Bruton, Wm. Agnew, A. D. Livonni, Pluton, La France. A. Blanc had a fine collection containing many new varieties, some recently imported and other good ones raised from seed.

W. H. Maule's exhibit was also large and varied and contained many superb flowers. Mr. Maule makes the dahlia one of his specialties; the present season his sales were larger than ever before and showed that the general public is taking hold of this old garden favorite. Mr. E. C. Taylor filled a table with single varieties which attracted considerable attention. H. A. Dreer had also a fine display but not for competition. Edward Y. Kulp, gardener to Mrs. Stuart Patterson, had a very good amateur exhibit.

The different collections were all nicely arranged and the whole effect looking over the vari-colored tables was very pleasing. Another good feature was that all varieties were labeled and it was easy for the visitors to note and select kinds that might be wanted for next year. Thomas Cartledge, Edwin Lonsdale and Wm. K. Harris acted as judges.

In addition to the dahlias there were fine collections of cannas by A. Blanc and H. A. Dreer. These displays were also much admired. Mr. Blanc also staged a fine lot of cactl among them many valuable varieties. The dahlia flowers were all given away at the close of the exhibition to the visitors present. The awards were as follows:

Largest and best general display of dahlias—William Henry Maule, Philadelphia; second, A. Blanc, Philadelphia.

Cactus dahlias—Vase of fifty of one color, A. Blanc, for the William Agnew; second, W. H. Maule, for red and black; vase of twenty five of one color, W. H. Maule for the Clifford W. Bruton.

Show dahlias—Vase of 36 blooms, red, W. H. Maule, for Ruby Queen. Vase of 36 blooms, white, A. Blanc, for Glory of Lyons. Vase of 36 blooms, pink, W. H. Maule, for A. D. Livonni. Vase of 36 blooms, yellow, W. H. Maule, for Pluton.

Fancy dahlias—Vase of 25 blooms, tipped, W. H. Maule for Frank Smith; vase of 25 blooms, margined, W. H. Maule for Fern Leaved Beauty; vase of 25 blooms, blended and shaded, W. H. Maule for La France; vase of 25 blooms, mottled, A. Blanc, for Uncertainty; vase of 25, any color, A. Blanc for Mrs. Gladstone.

Pompons—Vase of white, W. H. Maule, for Snow Clad; vase of any color, A. Blanc for Vivid.

Singles—Vase of 25 blooms, striped, E. Clifton Taylor, Germantown, for Novelty. Best display, E. Clifton Taylor.

Six largest flowers, any variety, A. Blanc for Colossus.

New seedling, best of any type not yet introduced—A. Blanc for Gilt Edge; second, E. Clifton Taylor, for Single Surprise, sweet scented.

Novelties in dahlias—A Blanc for Grand Duke Alexis. Largest and best display by an amateur to John McGowan, gardener to Mr. Bayard, Germantown, for 16 vases; second to J. Campbell, gardener to J. D. Winsor, Esq., Haverford.

Cannas—Best display, A. Blanc; second, W. F. Dreer, Riverton, N J.

Ornamental plants—Joseph Kift & Son, Philadelphia.

Cactus collection—A. Blanc.

Chicago.

COOLER WEATHER —BUSINESS IMPROVES — PRICES STIFFENING — MR. HAUSWIRTH RETURNS —VARIOUS ITEMS.

With the advent of cooler weather this week business has greatly improved. This is particularly noticeable in the shipping demand. Local orders also show a gradually increasing trade. Prices in all lines have stiffened somewhat, although there is no marked advance in quotations. Beauties have been benefited by the prevailing weather, bright days and cool nights. The best selected sell at 15 and 16, 8 to 12 being the figure asked for medium length. Brides and 'Maids are still small, but the latter are much better in color. Meteor is in great demand and of fairly good quality. Kaiserin still leads the list of whites by long odds. Some extra good blooms are being cut.

Carnations continue in brisk demand. The cut at present is rather light and on the whole of fairly good quality. The best go at $1 per 100. In garden flowers the list has dwindled down to a few sweet peas and the tail end of the aster crop. A few good gladioluses and hydrangeas are still with us.

Mr. P. J. Hauswirth and wife have returned from a very enjoyable twelve-day trip through the east, accompanied by Miss Annie Kreitling. Mr. Hauswirth is Great Sachem of the Redmen of Illinois,

and attended the Great Council of the order in Philadelphia, where his party was royally entertained by the local brotherhood. The Chicago party traveled in a special car and a stop was made at Niagara Falls, enabling Mr. H. to visit several florists in Buffalo. After the Philadelphia meeting visits were made to New York and Washington, and Phil reports that he never enjoyed himself so thoroughly as on this trip.

There was a very light frost last Tuesday night, but no noticeable damage was done.

Mr. W. C. Egan, secretary of the Horticultural Society, is building a small conservatory at his place in Highland Park, and will now devote some attention to plants under glass.

In the conservatory of President Chadwick, of the Horticultural Society, there is a plant of Cyperus alternifollus nine feet tall. It has been planted out several years in a border. He has a plant of Aristolochia gigas Sturtevantii now in bloom and full of buds. The "goose flowers" attract much attention from visitors.

A meeting of the Executive Committee was held yesterday to dispose of details connected with the coming exhibition.

Mr. and Mrs. Elmer D. Smith, of Adrian, Mich., were visitors the past week.

The next regular meeting of the Florists' Club will be held at the club room October 14.

Chrysanthemum Society Medals.

We present herewith engravings of both sides of the gold medal of the Chrysanthemum Society of America awarded to an English grower in the international competition at London under the auspices of the National Chrysanthemum Society of England last November.

The medal was won by Mr. Waterer over eight competitors with some superb blooms of the variety Mlle. Marie Hoste. It was offered under the following conditions: "The best 12 blooms of a chrysanthemum of commercial value, one variety only, introduced from any country, home, colonial or foreign. The exhibit to be staged in a vase, with not less than 18 inches of stem, the vase to be provided by the exhibitor. The variety to be of a pleasing color, likely to be salable; size and substance of the blooms also to be considered. The foregoing to be judged by American scale of points."

Toronto.

A DAHLIA MEETING —A CRICKET MATCH — JOHN FROST ESQ. APPEARS.—CHRYSANTHEMUM SHOW.

Dahlias were the principal attraction at the regular meeting of the Horticultural Society last week. The crowd was not quite so large as at the sweet pea meeting, probably because dahlias are not so universally grown. A very clearly written and practical paper by Mr. E. Grainger (of Messrs. Grainger Bros.) was read and listened to with great attention. Mr. Grainger brought down specimens of all the different types and many varieties, which helped to make the paper more comprehensible to the amateurs. There were many very fine blooms amongst them. A committee was appointed to consider necessary improvements in the Industrial Exhibition horticultural shows in conjunction with one to be appointed by the Gardeners' and Florists' Association.

About twenty of the gardeners and florists spent a most delightful day at Brampton last Thursday and were royally entertained by Mr. H. Dale. The weather was fine and very hot and the ground was in perfect order, in spite of which the Toronto boys managed to win the cricket match; it should be stated, however, that they had two crack players on their side, Messrs. A. Chambers and C. Leigh, both of whom work at Exhibition Park. A bad accident, which occurred to Mr. H. Dale, marred the pleasure of the visit to a great extent; he was unfortunate enough whilst fielding to receive a nasty blow from the ball on the cheek and nose just below the eye which had to be patched up by the doctor. Mr. Dale was well enough, however, to show us round his houses in the evening, all of which were as usual in first-class trim. The roses and chrysanthemums were looking especially fine and healthy and promise good returns in the future.

John Frost Esq. put in his first appearance for the season of '97, '98 this morning (21st) and was unkind enough to wither some tender plants with his icy breath. We shall likely see a good deal of him from this out.

The chrysanthemum has the floor now. Show arrangements will probably be up for discussion at the Gardeners' and Florists' meeting to night. E.

St. Louis.

BUSINESS CONTINUES TO GRADUALLY IMPROVE. — COOL WEATHER IMPROVES STOCK.—NO MATERIAL CHANGE IN PRICES. —A VISIT TO FRANK FILLMORE —RETURNED FROM EUROPE.— VISITORS.— DEATH ON MRS COLMAN.—VARIOUS ITEMS. —BOWLING.

Business continues to improve gradually. The protracted dry and hot spell has at last been broken by a rain and several days of cooler weather, and the demand for a better quality of stock is now fairly on. The cooler weather has encouraged the retailer to carry a much larger stock, something he has not thought of doing for months past.

In roses the pink and white ones are plentiful, but red and good Beauties are scarce. Perles not overplentiful, and the demand has made no impression on prices in general. Carnations are doing much better since the cooler weather has come, and each day brings in better stock. The first chrysanthemums of the season came in last week, but only one dozen, and they were very good. A few asters are still coming in, but they are very small. Tuberose stalks, single Armstrong's everblooming, are selling well just now, also quite a good call for smilax the past week. A few single violets made their appearance, but were very small.

I paid a visit to Frank Fillmore's place. One would hardly know it, as he has taken down all the little houses and replaced them with fine large and light ones, all his glass being 18x22. The roses are in fine shape, and Frank will be heard from at the show this fall. His 'Maids, Brides and Woottons are looking especially strong. The Perles, however, are the best stock on the place, very strong and healthy, with the top a mass of red shoots. Frank's carnations, from the way they look, will also be heard from, and especially Flora Hill. Scott, Daybreak and the chrysanthemums are also looking their best. Frank always prides himself on having everything of the best, and from the looks of the place he's going to have it.

William Young and his father returned from Europe last week in the best of health. Bill will read a paper at the next club meeting on his travels.

Wm. Dykes, representing Ed. Jansen, New York; Paul Berkowitz, of H. Bayersdorfer & Co., Philadelphia; and Swan Peterson, of Gibson City, Ill., were visitors last week.

The Michel Plant and Bulb Company will have a meeting at the office of the company on October 14 for the purpose of voting on a proposition to decrease the amount of the capital stock from $50,000 to $10,000.

Mrs. Norman J. Colman, wife of the ex-Secretary of Agriculture, died last Saturday afternoon at the family residence, 5471 Delmar avenue. Her death was due to a sudden attack of heart failure.

Willie Jordan, son of J. M. Jordan, is very happy nowadays. "It's a boy," and all are well.

At the Bowling Club Monday night we had a cool time of it, and all the boys felt good and rolled a few good games. Mr. Dykes, of New York, was a visitor and rolled his first game with us. He likes it and will roll whenever he gets a chance. In the regular three games rolled Emil Schray was on top with 547, C. Beyer second with 523, and Kuehn third with 490. In single score Kuehn was high man, 204, and Schray and Bauer were a tie for second with 199 each. Next Monday night we roll on the new regulation alleys at 6th and Pine streets, and a full attendance is expected. J. J. B.

Pittsburg.

WELCOME RAIN.—FIRST FROST.—RETURN OF JOHN BADER AND DAUGHTER —CLUB MEETING THURSDAY —BUSINESS FAIR — THE FIRST CHRYSANTHEMUMS. — MR. GIBBS' IMPROVEMENTS.

The backbone of the very unseasonable hot weather seems to be effectually broken this week. On Sunday afternoon the long looked for and greatly needed rain commenced falling, continuing well into Monday, and that night we experienced the first frost of the season. In some of the more exposed localities ice formed, the thermometer having dropped to 32°. In this locality the heavy fog of Tuesday

morning seems to have been productive of much good, as only the most tender of the flower, foliage and vegetable plants were injured, and the damage done was comparatively small considering the severeness of the first visit of "Jack Frost."

Mr. John Bader and daughter have arrived safely home from their trip to Europe and on Thursday night, 23d inst., the Florists' Club will hold a regular meeting and which will also be an informal reception to Mr. Bader, the president of the club. He will give a talk giving his impression of "Two months' travel through Europe," and as Mr. Bader sees things through practical eyes, it ought to be very interesting, as he will not follow the beaten track of tourists. The meeting is unfortunately too late in the week for a report in this issue.

Mr. E. C. Ludwig, Allegheny Market, reports business as reasonably fair. He has just finished a very fine decoration; the entire house was profusely decorated with flowers and foliage plants, the occasion being the marriage of one of Allegheny's most popular belles. The demand for funeral work he says is very steady and reliable.

Chrysanthemums have made their appearance once more. To Mr. Fred Burki, of Bellevue, belongs the credit of having the first ones this year from our immediate locality. Mr. Burki furnished a few on last Saturday; they were very good for early ones. From present appearances and reports chrysanthemums will be very superior in quality this year and prices not at all likely to be prohibitive, in fact the consumer will in all probability have the best end of the bargain.

Mr. J. F. Gibbs, of Woodville, is having a new dwelling erected, replacing the one he lost by fire. He is putting it further back on the lot and will make other improvements. At his greenhouses in the East End of the city, the improvements are almost completed; they are well stocked and the plants are looking well; his son Sidney is supervising these. The outlook for a favorable business at these houses is very encouraging. REGIA.

St. Paul.

UNUSUAL HEAT RETARDS BUSINESS.—MOST FLOWERS PLENTY.—BEAUTIES SCARCE — BUSINESS CHANGES —MEETING OF STATE SOCIETY 16TH INST.

The unusual heat recently prevailing so late in the year had a deteriorating effect on trade. Society is still dull, people are rusticating at the lakes, and flowers are not in very great demand. We have had no severe frost and outside stock is still in good shape. The demand for funeral flowers still keeps up while the shipping trade is fairly good.

The intense heat of the past two weeks brought out an abundance of bloom and some roses have gone to waste. Am. Beauties are scarce and in good demand. As the growers have thrown out their old carnations and are just now lifting the field grown ones, these flowers are quite scarce. Good asters are also scarce owing to the prevailing aster disease. 'Mums are coming along in elegant shape.

Haugen & Nilsen have dissolved partnership, J. Nilsen continuing the business. He will grow violets principally with some spring bedding stock. Mr. Haugen has rented the range of houses located on Hague avenue, belonging to E. F. Lemke, and formerly run by L. G. Venzke. We trust that both Mr. Haugen and Mr. Nilsen will be as successful individually as they have been associated together.

E. Behrens has completed his new houses which present a neat attractive appearance.

L. L. May & Co. are moving their stock of seeds to their new warehouse.

The annual meeting of the Society of Minnesota Florists was held in Minneapolis the 16th inst. FELIX.

Indianapolis.

The display in floral hall at the Indiana State Fair was conspicuous for the absence of the large specimen plants and floral designs which have been notable in former years. The management cut the premiums and the florists of Indianapolis retaliated by cutting the exhibition, all the exhibitors of previous years agreeing not to exhibit. Only one florist could be found to exhibit, and probably with the expectation of an easy victory all along the line. This was Mr. E. H. Schmidt, but he had one competitor in the person of Mr. W. W. Coles, of Kokomo, who had not heard of the deal entered into by the Indianapolis boys. Mr. Coles took both firsts and seconds for collections of cut roses, cannas and gladioluses, and first only on collection of general cut flowers, Mr. Schmidt taking second. Mr. Schmidt made the only cutries for 3 baskets, 3 funeral designs and 3 bouquets, and received first in each case. For best and most original show design E. H. Schmidt was first, W. W. Coles second.

It seems a great pity that there should have been any friction between the state board and the florists, as these exhibitions are excellent educators of the public. Let us hope they will "kiss and make up" before another year. KLONDIKE.

Worcester, Mass.

TRADE IMPROVING.—GOOD FLOWERS NOT PLENTIFUL.—LAST CARNATIONS BEING HOUSED —THE EXHIBITIONS.

Trade has improved very much during the past week, the cold weather driving people in from seashore and mountain and the musical convention also helps to swell the demand. Good flowers are not at all plentiful. Roses are pretty short and carnations are not coming in in any great quantity. Asters are also falling off rapidly and if trade continues to improve, stuff will be very scarce.

The weather is just right for housing carnations and the last few houses are being rushed in as rapidly as possible. Funeral work has kept us pretty busy and used up the bulk of white stuff. The horticultural exhibitions continue to be well patronized and the shows are very creditable to the society. A. H. L.

POUGHKEEPSIE, N. Y.—John Yourg, of New York, is judge in the floricultural department, and Wm. P. umb is judge on fruits and vegetables at the Dutchess County Fair which is now in progress.

INDEPENDENCE, IA.—Mr. E. M. Bissell has formed a partnership with Mr. J. A. Cilly and the business will be continued under the title E. M. Bissell Floral Co. They have added two new houses each 16x50, making a total of about 4,500 feet of glass, all heated by hot water.

JOLIET, ILL.—One of the most notable private gardens in this city is that of Mr. F. S. Allen, the architect. Mr. Allen is specially fond of cannas and has all the best recent introductions as well as standard sorts. There are over fifty varieties and the display on his grounds has been remarkably brilliant.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By young man as night fireman or greenhouse work; experienced. Address C D G, 74 Milwaukee Ave., Chicago.

FIELD-GROWN
CARNATION PLANTS

We offer for sale 8,000 or 9,000 first-class Carnation plants now in the field. They consist of about 6 000 Rose Queen (extra strong plants), 1000 Orange Blossom, 500 Daybreak, 500 Wm. Scott, 500 Ivory, and some Dean Hole, Storm King and Alaska.

PRICE, $3.00 PER HUNDRED.

If the whole lot is wanted write us for Special Price.

BASSETT & WASHBURN, Hinsdale, Ill.

Mention American Florist.

Barrie, Ont.

DEATH OF WILLIAM VAIR.

William Vair, of the Vairville Nurseries, brother of George Vair, of Toronto, died September 13 as the result of a stroke of paralysis the day before.

Mr. Vair was a most amiable man and a thorough, all-round gardener. He was a native of Roxburghshire, Scotland, and came to Canada about twenty-eight years ago, settling in Toronto, where for a few years he was foreman in the Toronto Nurseries. He then came to Barrie and has ever since conducted a successful nursery business. He was a quiet and unassuming man, and did not belong to any society. He was a Conservative and Presbyterian, and was respected highly by his fellow citizens. He was twice married, his first wife dying some eight years ago, and his second wife is still living. He leaves five sons and one daughter.

GREENSBURG, IND.—Mrs. H. Deemer and Charles Deemer have formed a partnership with the firm title of Mrs. H. Deemer & Co., and have built a modern range of glass. A city salesroom has been established and arrangements made for doing a general florist business.

OUR BARGAIN TABLE

Nurserymen and Landscape Engineers.

PERIWINKLE.
VINCA MINOR,
" " **ALBA,**
" " **HERBACEA**

Holds only Periwinkle, but nevertheless calls for the attention of everyone. Who is there that owns a lawn and has no bare spots on it, and who that does not admire at least one of the three kinds offered.

A portion of our ground now occupied by these plants is in urgent demand, and we would greatly prefer to dispose of our large stock at a sacrifice than transplant it.

We base our prices on small plants, as the purchasers may then know exactly how much they require. The plants will consist of from 2 to 6 stems each, but we shall send in larger clumps, not divided, that the purchasers may make larger or smaller divisions as preferred.

Price of plants of any kind $2.50 per 1000.

THOMAS MEEHAN & SONS,
GERMANTOWN, PHILA., PA.

WE QUOTE CLOSE ON GLASS AND PAINT.
JOHN LUCAS & CO.,
PHILADELPHIA, NEW YORK, CHICAGO.

900,000 PANSY PLANTS.

NOTICE.

CHICAGO, September 14, 1897.

We desire to announce to our friends and patrons in the trade that the business heretofore conducted under the name of C. W. McKellar, will on and after the 15th of September be continued under the firm name of Vaughan, McKellar & Winterson, the members of the new firm comprising A. L. Vaughan, Chas. W. McKellar and Ed. F. Winterson. Our long experience in the wholesale cut flower, seed, bulb and supply trade throughout the United States should be sufficient evidence of our ability to handle your wants in the several branches which we have hereinbefore mentioned. We respectfully solicit your kind patronage.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

VISITORS IN NEW YORK: W. Atlee Burpee, Jas. Vick, S. F. Willard (Comstock, Ferre & Co.).

THE Philadelphia *Times* of September 11, devotes three columns to a very interesting account of W. Atlee Burpee & Co's Fordhook Farm at Doylestown, Pa.

REGARDING THE OUTLOOK for seedsmen the coming season, Mr. Hugo Beyer, of New London, Iowa, writes as follows: "Business prospects for next season I find very good and the damage done by the government seeds the past season to seedsmen will be made good, has taught the people a very good lesson, a blessing is that supplied this section, they were no account, people can be fooled sometimes but not always; outcome of my business was much better than expected and future appears bright."

Cincinnati.

Mr. Chas. McCullough, of Second and Walnut streets, has leased for a number of years the warehouse formerly occupied by the Farmers' and Shippers' Tobacco Co., cor. Vine and Water streets. It is an enormous building 100 feet square and seven stories high. A large force of workmen has been kept busy the last four weeks in renovating and reflooring the building. This warehouse will give Mr. McCullough, in connection with his six-story plant at Second and Walnut streets, over 60,000 square feet for storage and other uses. New machinery will be put in and the necessary cleaning and preparing of grain and seed will be done at the new warehouse. It is a remarkable fact that this house sold over a half a million pounds of pop corn the past season. Mr. Ch. McCullough is one of the largest buyers of grain upon the floors of the Chamber of Commerce and found it necessary to secure additional room. When completed this will be the largest and most modern seed warehouse in the west. HY. SCHWARZ.

Rochester, N. Y.

TRADE UNSETTLED. — STOCK PLENTY — FALL PLANT TRADE PICKING UP.—THE STATE FAIR.

The retail trade in cut flowers is very unsettled yet. One week it is very dull and then again a lively demand sets in for a few days. Stock is very plenty at all times, though the continued dry weather has lowered the quality of outdoor stuff. Usually the storekeeper is decidedly caretul now in buying his daily supply, carrying only a light stock of the perishable goods. For the past week business has been improving once more, little September weddings and small decorations were in order, so our florists were not idle altogether and the fall plant trade too is slowly beginning to pick up. Small sized palms, dracænas and ficus are in demand and fern dishes are coming in faster than ever to be filled on short notice. It is too early in the season for flowering plants to be in brisk demand; occasionally a lily or a begonia of some sort is disposed of but foliage plants, palms or ferns take the lead. Judging by the display of such plants in the storewindows we must come to the conclusion that the growers have exerted themselves this year more than ever to produce only first-class stock, for the plants are all remarkably fine and healthy.

The Western N. Y. State Fair closed last Friday. It was a success financially, the attendance being very large on each day. Floral hall as usual was well patronized by the public, but though the tables were all closely occupied, competition was not very sharp. The inducements in premiums offered are small in comparison with those of other similar societies of the same standing. In the fruit department they are more liberal, but flowers and plant premiums have been reduced so low that it is difficult for the superintendent to find florists who will exhibit in this class. No extra exertions are made by any one to bring forward their best plants, they merely make up the number and varieties required and it is looked upon as a favor if they compete at all. Under these circumstances the writer refrains from all comments on the exhibition, although there were a few specimens in the hall which were worthy of mention and the cut flower show was very large and varied. K.

PATERSON, N. J.—The Paterson Florists' Club held a meeting on the evening of September 15. Vice-president Phelps gave an interesting talk on pertinent topics and invited the members present to a banquet. It is expected that a public exhibition will be given next year under the auspices of the club.

NEWPORT, R. I.—Joseph Gibson, the faithful gardener at the Morgan estate, died suddenly on the evening of September 3. He was the uncle of the popular Gibson Brothers, of Bellevue avenue.

DECATUR, ILL.—Mrs. Katherine Daut has enlarged her glass surface and will do a regular florist business in addition to vegetables. Joseph Charonne is foreman.

Syracuse, N. Y.

DATES FOR CHRYSANTHEMUM SHOW.—SCHEDULES READY.—A HORTICULTURAL FLOAT.—MARKED IMPROVEMENT IN BUSINESS.—TROUBLE WITH ASTERS.—FEW CARNATIONS HOUSED.—POOR EXHIBITS AT THE FAIR.—BUILDING.

At a recent meeting of the Central New York Horticultural Society it was decided to hold their annual chrysanthemum show November 9 to 11, in the Alhambra Rink, and everything seems favorable for a good display. The schedules are ready and can be obtained by applying to the secretary, Mr. D. Campbell, gardener to Major Alex Davis, this city. It was also decided that the above society have a float in the procession on the anniversary of the city's semi-centennial, which occurs October 12. Arrangements have been made for one on an elaborate scale representing every branch of horticulture.

It is pleasant to chronicle a marked improvement in business the past week as the past few have been very dull indeed. Trade over the counter has been quite brisk and there has also been quite a call for funeral work both from the city and surrounding towns. Roses are in good demand with the supply not anywhere equal to it. Home grown stock is beginning to come in in small quantities and is of fine quality for the season fetching $1 per dozen. Carnations are also very scarce. Annuals, especially asters, are very abundant but the extreme heat and dry weather has told greatly upon them. The fine Semple's variety, of which a great many have been grown, has for some reason with the majority of growers given anything but satisfactory returns this year, it being a hard matter to get perfect blooms from them.

There are not many carnations housed at present on account of the hot spell and the majority of the plants in the field are much smaller than last year. Roses have been more largely planted and look exceedingly well all around. It is safe to say quite double the number of American Beauty has been planted than previously. This variety is becoming a more popular favorite here every year and is always in demand.

The exhibits of flowers and plants at the Onondaga County Fair held here September 7 to 10, were far below those of last year in regard to quantity and quality. There is no doubt the fault can be attributed to the extremely poor premiums offered. H. Bellamy and C. Barson were the judges.

Gustave Bartholme has added two more houses to his plant at Woodlawn, 100x20 and 100x10 respectively, for growing bedding plants, his trade having increased very largely in that direction last spring. Peter Kay has also built a rose house 80x16 feet, three-quarter span.

ALPHA.

50 HYDRANCEA OTAKSA, 6-inch pots, for $7.50 or $2.00 per dozen.

200 VINCA VARIECATA—Field-grown, $5.00 per 100

Receiver's Sale!

THE ENTIRE STOCK OF PLANTS OF

PITCHER & MANDA, at Short Hills, N. J.

Will be offered for sale without reserve on **October 4th, 5th, 6th and 7th,** next. The stock consists of over **100.000 PALMS IN SPLENDID CONDITION,** in such standard varieties as **Areca Baueri, Areca lutescens, Cocos Weddeliana, Kentia Belmoreana, Kentia Forsteriana, Latania borbonica, Phœnix reclinata, Livistona rotundifolia, etc., etc. ALSO the finest stock of Adiantum Farleyense ever seen in this country,** and a general assortment of other **Ferns,** as well as a very fine lot of **Ornamental Foliage Plants** containing many choice things not to be found elsewhere.

Together with all the greenhouses, packing sheds, etc., and all the real estate, which will be sold in four distinct parcels as follows:

No. 1. Contains about 10½ acres, on which are located all the greenhouses, about 80,000 feet of glass, all in excellent condition; a good dwelling house, containing eight rooms; stable, store rooms, packing sheds, several hundred sash and frames, etc., etc. This is a specially favorable opportunity to purchase a well established Florist and Nursery business at a greatly reduced price, within three minutes' walk of the railroad station, and eighteen miles from New York City.

No. 2. Contains about 3 acres, with a good dwelling house on it, within 500 feet of the railroad station.

No. 3. Contains about 6½ acres, now used as an Herbaceous Nursery, and is well stocked with the largest and best collection of these plants in the country. Close to railroad station.

No. 4. Contains about 62 acres, well adapted for an excellent Nursery, Farm, or to cut up for building lots. This is situated on the main road between Short Hills and Summit, and one mile from each station.

R. KILBOURN, Clinton, N. Y.

Sharon, Pa.

An event of unusual prominence occured during the past week when Miss Gertrude O'Brien, the eldest daughter of florist M. I. O'Brien, was united in marriage to Mr. F. L. Maloy, a successful young business man of Altoona, Pa.

The magnificent floral decorations, both at the Sacred Heart Church and at Mr. O'Brien's house, arranged for the occasion, eclipsed everything of the kind ever seen before in this city. The entire edifice was profusely decorated with lofty palms, asparagus, adiantums and American Beauties, while in the center aisle, about midway between the altar and vestibule, there were two floral gates, each 4x6, composed of the choicest roses and ferns, through which the bridal party passed. It was a unique as well as a most charming arrangement and will no doubt mark a new departure in church decorations here.

Miss Gertrude O'Brien, now Mrs. Maloy, I will remark in passing, is a charming young woman, of the blonde type, tall, graceful and stately, and her friends in this city and in the surrounding towns are legion. The wedding presents were numerous and of an expensive sort, including furniture, china, linen, pictures, silverware, cut glass and bric-a-brac.

Mr. O'Brien has the best wishes and hearty congratulations of his numerous friends in the craft, including HOMO.

Omaha, Neb.

DISPLAY AT STATE FAIR—THE AWARDS.—VISITOR.—THE CONVENTION.

The display in cut flowers and plants at the State Fair is good and creditable to the florists. Peterson Bros. made a fine display, as did B. Haas, L. Henderson and Paul Floth. The first prize on plants went to B. Haas. The first on cut flowers went to Peterson Bros., 2d to L. Henderson. First prize on best design went to Peterson Bros., 2d to L. Henderson. Paul Floth took two firsts on plants. The State Fair this year has been a success.

Business is good and stock is somewhat scarce.

Mr. P. Berkowitz, of Bayersdorfer & Co., called on us, and reports business good all over the west.

The florists of Omaha and all over the state are very much pleased at the prospect of having the honor of shaking hands with their brother florists from all over the U. S. next year, and promise them a good time. J. HESS.

MADISON, WIS.—A Milwaukee attorney has sent out notices of the voluntary assignment of Francis W. Bresee, the florist of this city.

ALBUQUERQUE, N. M.—The first annual fair of the New Mexico Horticultural Society was held here the week ending September 10. The display of fruits and vegetables was excellent.

THE CLIPPER GREEN HOUSE RAFTER. NO PUTTY REQUIRED.

Butted Glass.
This is no longer an experiment, it has come to stay. There are various ways of making Butted Roofs, but the best way is with the
Clipper Bar.
With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

CHAMPAIGN, ILL.—J. E. Yeats has added 22x36 to his palm house.

LAFAYETTE, IND.—F. Dorner & Sons Co. are building three more houses, two 22x125 for carnations and one 12x125 for other plants.

CEDAR FALLS, IA.—Jos. Bancroft & Son have just finished a new rosehouse 22½x80, packing shed 20x80 and a large chimney. They have also reset one boiler and added one new one of 35 horse power, using battery system.

Rose Notes.

I suppose the present condition of our young stock will in most cases indicate pretty accurately the measure of our success during the coming winter and spring; if our plants are healthy and vigorous, and the outlook is bright and rosy, we shall be proportionately happy, but if on the other hand the prospect is dark and cheerless we must take courage and hope for the best. It is surprising how many difficulties may be overcome when we are buoyed up by hope. Because a house of roses has not made the growth that with good culture we feel it should have made in a given time, we must not jump to the conclusion that it must inevitably prove a failure; instead of losing interest in it because of the discouraging outlook we should give it a little more thought and attention than is given to the other houses, and by close observation aim to discover what is lacking in the soil, or wrong in the treatment. For the encouragement of those who may have plants that are acting in this manner I would say that I have more than once seen benches of plants which at this season were much below the average, turn out in the end equal to the very best. I don't wish anyone to think that I would put a premium upon mediocre or inferior stock, or have them feel that they can escape the consequences of neglect and ignorance; but it sometimes happens when we have given a house of roses the best possible care that they fail to start up in a satisfactory manner, in such cases a word of encouragement is often very acceptable.

It is surprising what foolish and ridiculous expedients many men will resort to when they find themselves in a dilemma like this; every conceivable kind of experiment is tried in the hope of putting life and vigor into the plants, and the more unnatural the treatment adopted, the more sanguine they are of success.

A short time ago a brother florist who had just taken charge of a number of rose houses called upon me to ask advice; complying with my request for a plain statement of the case, he assured me that his roses in many respects were very fine, were very bushy, had large well colored and luxuriant foliage, that the root action was all that could be desired, that in fact they looked if anything too fine, but so far they had not produced many strong stout shoots, and the query was could they not be coaxed into, or compelled to throw up vigorously by drying them off, and after a season of rest starting them up again slowly. I of course advised him to let "well enough" alone suggesting that since they were in perfect health and were furnished with adequate roots they must in the very nature of things sooner or later make a vigorous growth. Had he put his plan into execution the probability is that he would have ruined the stock for the early part of the season at least, and might have lost his position in the bargain. Any experiment that will lead us away from nature is taking us in the wrong direction, and the following of such a course is almost certain to prove disastrous. If keeping the plants clean and free from all insect and parasitic pests, watching carefully the condition of the soil, and giving a little less or a little more water as may seem to be the best, supplying a congenial atmosphere at all times, and possibly a little enriching of the soil, will not insure a satisfactory growth, then I think there is little hope.

As intimated in a previous article we usually give all our tea roses about this time a mulch consisting of from one-half to one inch of well decayed manure and soil in equal quantities. Unless the plants are well supplied with these ingredients we usually give a light sprinkle of wood ashes and fine bone before spreading the mulch, and in case there is a deficiency of calcareous matter we supply the lack with a dusting of air-slacked lime. It is my opinion that lime might be used with advantage much more freely than at present, especially on heavy soils where it is often more valuable than manure.

The sudden and extreme changes in the weather, one day very warm and the next cold, sometimes too warm at night to give fire heat, but often very cool the following morning, should make us very careful how we ventilate, and also how we leave our boilers at bed time. The successful rose grower needs to be somewhat of a weather prophet at this season of the year.

Mildew must be held in check at any cost; the man who is watchful and faithful won't have any, but if we have been careless and have got a dose no time should be lost in not only dusting the foliage with sulphur but also painting the heating pipes with sulphur and lime.

After we commence cutting flowers the fumigating of such varieties as Perle, Niphetos and all of the Mermet family will not be permissible otherwise damaged blooms will result. Perhaps the cheapest and simplest device after all for keeping down greenfly during the winter is the old and well tried one, namely, good fresh tobacco stems distributed through the house.

ROB'T SIMPSON.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Carnation Notes.

SUPPORTS.

New methods of supporting the plants will soon be as numerous as new varieties. All think they have reached perfection, but in fact there is not one method yet to be called perfect. This part of the carnation culture advances hand in hand with the other improvements, but there are principles that can never be violated with impunity. Among these the first is an unimpaired freedom of growth, as the habit of the variety dictates. We all know how different these habits are, and generally those that are most difficult to handle we would not like to part with.

Among these I will mention Daybreak, and will call it the Daybreak type. The straggling growth typical of this variety will not yield to any tying or bunching in a given space without injury. The reverse of this type are the varieties with a short bushy growth, and here I will name Bridesmaid, or one of the older varieties, Garfield. These are much easier to handle, but are more apt to be late bloomers or to come in crops. Between these two extremes are numerous varieties leaning more to one side or the other. We see that the most unwieldy ones to support are the most desirable as regards early, free and continuous blooming, and I have always found these characteristics in most of my seedlings of this type.

I said in my last notes that a dry and light atmosphere is healthful to the plants, and a moist soil will make them grow. I may ask what is the object of a support when we let the plants grow at will. In the first place I think they would hardly need any support in the field, but the increased and softer growth under glass makes it a necessity. Plenty of fresh air, so essential to the welfare of the plants, should have access to all parts of the plant, and it needs it in a full measure to keep the foliage dry in such close proximity to a moist soil. So the first object of a support is to hold the plants up from the soil, on which they would unavoidably rest, and secure a circulation of air underneath.

Now, to draw the body of the plant together with a string, or as some of the wire supports do, is in my opinion jumping from the frying pan into the fire. The crowded center, the strongest part of the plant, is worse off than the outer branches when resting on the soil; in either way the circulation of air is shut off and the disease inviting dampness retained. What will free ventilation amount to when the plants are bunched and tied up like a inverted broom. Every branch wants its share, and continuous bloom can only be expected when a plant is not hindered in its natural development.

The other object of a support, independent of the support for the body of the plant, is to support the flower stems. In the desire for long straight flower stems the body of the plant, from which they emanate, is often neglected, and the future development impaired. Large flowers on long strong stems are what we aim for, but we must first strengthen and support the plant to produce them. More on this theme in my next notes.

FRED DORNER.

Snails in Carnation House.

We have been bothered with snails in our carnation houses for years. How can we get rid of them? So far the only way we know of is to catch them at night, that being the time they come to feed. We generally find them eating the center out of a flower. We catch thousands of them ranging in size from that of a pin head to six inches long and as thick as one's finger. We have not been able to exterminate them from any one place and they prove very destructive.

B.

I think that if Mr. B. will thoroughly clean his houses both on and under the benches, then fumigate with flour of sulphur at least three or four times before planting he will eradicate his trouble. The sulphur is death to all insect life. I fumigate all my houses in that way every season before planting and am never bothered with snails. ERNST G. ASMUS.

Snails spend the day under the benches in damp places, under boards and on damp pots, in crevices out of sight. Moral: Clean the ground under the benches and every other place where the snails are apt to be. Snails do not like salt as it will kill them if they come in contact with it; do not put the salt on the benches as it is not good for the carnation except in limited quantities. It would be a good plan to make a shelf two inches wide around the bench and upon this put a thick layer of salt. Do not stop hunting at night as this is the surest way to exterminate the snails.

CHAS. H. ALLEN.

Herbaceous Plant Notes.

It was a surprise to many visitors to the Western N. Y. State Fair, September 14 to 18, to find such a large and varied collection of hardy flowers exhibited in floral hall, and as many of your readers are interested in herbaceous plants a list of their names may be useful and instructive to the beginner in more than one way. The collection includes the names of many species which are flowering a second time in the season, but the majority are regular summer and fall bloomers and can be relied on to flower at this time of the year.

First there was a great variety of hardy asters among them the beautiful deep pink A. novæ angliæ rubra, the dense flowering A. ptarmicoides, A. amellus bessarabicus, the dwarf A. Mme. Seguire, also A. alpians, which is really a summer bloomer but is now again in flower. The dracocephalums were represented in four varieties, altaiense, grandiflorum, austriacum and Ruyschianum. Besides the regular hardy garden carnations, a number of other dianthus were exhibited, most all of them, laced species like D. arenarius, D. petreus, D. superbus, also the deep colored D. liburnicus. The showy Rudbeckia hirta was in excellent shape, so was R. speciosa or Newmanii, R. pinnata, R. laciniata Golden Glow, R. maxima, R. purpurea and R. amplexicaule; the three last a little past their best. Hypericum elegans, H. Moserianum and H. patulum were plentiful. The Japan anemones were shown on very long stems and A. sylvestris was in flower for a second time this year. The scarlet pods of Physalis Alkekengii and the newer P. Franchettii made a grand show.

Hollyhocks in variety loomed up between a mass of Euphorbia corollata. The curious satiny flowers of Carlina acaulis were admired by many. Saponaria officinalis fl. pl. and the deep colored S. caucasica fl. pl. could be noticed in large bunches; the last named is very bright and deserves recommendation. Delphiniums were in flower a second time; the panicles are smaller than those of the first crop; the same may be said of Veronica spicata, V. incana and V. amethystina, while V. virginica had large spikes but was almost past its best. Lychnis vespertina plena and L. semperflorens plenissima are always in flower, and no wonder we saw large generous bunches of them. Gypsophylla paniculata was loosely spread over the steel blue Commelina cœlestis. C. cœlestis alba also had its admirers. Both of these flower all summer, but require protection in winter with us. The slender spikes of Reseda glauca looked very pretty in a glass jar by themselves.

The large yellow Linaria dalmatica and the small purple flowered L. purpurea were put up intermixed together. The dwarf L. alpina was shown as a pot plant because the densely flowered sprays are too short to be cut. Sagina pllifera and several arenarias were exhibited in the same way. Œnothera Fraserii and Œ. Youngli are fine yellows, Œ. speciosa and Œ. taraxacifolia are whites, and Œ. rosea is a bright deep rose colored species, the last named a very dwarf grower. Long spikes of Sidalcea malvæflora and S. candida were springing from a base of Tunica saxifraga; Scutellaria alpina and S. a. cœrulea were near by. A large bunch of the coral red Heuchera sanguinea created quite a sensation and the trailing Antirrhinum asarina with its pale sulphur flowers was admired greatly. Five different armerias were shown; the large heads of A. cephalotes were conspicuous, though A. dianthoides, A. Laucheana, A. plantaginea and A. maritima are all desirable. Centranthus ruber, alba and sanguinea came next, followed by a bunch of Physostegia virginica, but this latter was on the wane. Beautiful tall panicles of Campanula pyramidalis towered above C. rotundifolia, C. muralis, C. trachelium fl. pl., C. Van Houtteii, C. persicifolia cœrulea and alba; the last four are out of season, but C. carpathica in three varities are as good now as they were two months ago.

Pentstemon barbatus, P. Murrayanus and P. pubescens were plentiful. Antennaria margaritacea begins to show decay in the center. Centaurea montana, C. m. alba and C. dealbata are not scarce in September, and Statice latifolia is in splendid condition. S. sinuata flowers all summer, but requires protection from the cold. The bright red flowers of Stachys coccinea are quite showy, though the plant itself does not succeed in all localities. Lythrum Græfferii with its many lilac rose flowers blooms constantly, but should be cut down about August 1, to get a fresh growth on the plants. Coreopsis lanceolata and the larger flowered C. monstrosa are both good now. The tall C. tripteris was also there on very long stems. Silene maritima fl. pl., S. Schaftæ and the pretty S. quadriauriculata are very dwarf plants, yet they were shown in a cut state in little jars. Polygonum affine and P. cuspidatum are both desirable white flowered species; P. amplexicaule and P. sachaliense are tall but very ornamental.

Among the many gaillardias the large flowered G. Vivian Grey was one of the most conspicuous; it is a pure yellow with very broad petals. Several flowers of the dark crimson G. James Kelway measured 5 inches across and G. Buffalo Bill with

THE NEW CONSERVATORY AT WASHINGTON PARK, CHICAGO.

its tube shaped petals was not much behind in size of flowers. Helenium autumnale, H. pumilum and H. grandiflorum superbum were a grand show. Salvia farinacea and S. pratense were very good. Clematis paniculata was there in long sprays, and the blue hyacinth-like bells of C. Davidiana were mixed in with them. Catananche cærulea and C. bicolor are free bloomers at all times. Dicentra formosa and D. eximea the same, and generons bunches of them were cut. Montbretias in several colors showed well in the glasses. Anthemis tinctoria and Kelwayii were there and a few sprays of Spirea lobata and the pretty S. filipendula pl. could also be noticed, but they were out of season. Epilobium angustifolium, E. a. album and E. hirsutum, were still good. Funkia grandiflora, F. undulata media picta, F. Sieboldii and F. ovata were exhibited with their foliage. Sedum spectabile was shown in large heads and Chelone barbata, C. obligua, C. o. alba, C. glabra and C. Lyoni were all represented.

Long spikes of Cimicifuga racemosa and the late flowering Astilbe Thunbergii were plentiful. Platycodon grandiflorum and the dwarf P. Mariesii were good, but it is a little late for them. The second flower crop of Trollius europæus and T. asiaticus seems to be as large as the spring crop and the flowers are of good size. Scabiosa caucasica and S. ochroleuca hold out much later than this. Malva moschata and M. m. alba, Lobelia cardinalis and the blue L. syphilitica could be seen in good spikes, though they would have been far better if the weather had not been so dry lately. Achillea ptarmica plena, A. aurea and several of the millifolia varieties were good. Verbena venosa the same and a few spikes of Digitalis ambigua as well as D. purpurea, though out of season, were very large.

Ophiopogon Jaburan fol. var. was just right for cutting and Caltha palustris major, in flower a second time, was very plentiful. Three different geraniums and the pale yellow fall blooming Polemonium flavum were next to them. Agrostemma coronaria and A. flos-jovis, together with Callirhoe involucrata in large bunches, greatly assisted in brightening the collection. Chrysocoma linosyris among Aconitum napellus, A. japonicum and A. autumnale looked well. Pyrethrum roseum was there in named varieties, but this was a second crop, which can not always be relied on. Viola cornuta in several varieties showed the effects of the recent hot spell and the flowers were small. Agrimonia eupatorium in long thin spikes filled a large jar. Then came a collection of helianthuses; prominent among them was H. orgyalis and H. lætiflorus. Lathyrus latifolius and L. l. albus, Papaver nudicaule, red, white and yellow; monardas, two heliopsis, boltonias, several hibiscus, Plumbago larpentæ and a host of phloxes finished the collection. Far more Phlox suffruticosa varieties were on exhibition this year than ever before.

Two hundred and seventy-five species and varieties of hardy herbaceous plants were shown here and the collection might have been much larger, for many of the fall blooming plants were not represented at all. J. B. KELLER.

Wintering Pansies in Open Borders.

A few years ago we were timid about this and experimented with but a few and made some blunders by planting so late in autumn that they did not have growing weather sufficient to spread new roots around in the soil and consequently were drawn up badly from the ground, freezing and thawing, and by spring many had perished.

We now prepare our beds in October by digging deeply and breaking up all lumps; after raking level a fair covering of pulverized stable manure is put on and the plants set in rows 6 or 8 inches apart, plants 4 inches in the row. By planting in October they will get a good start before the ground freezes and the manure mulch will go a great ways to modify the extremes of freezing and thawing in the absence of snow, which is the case the greater part of our winters here.

In sections where there is more constant snow the wintering of pansies is attended with less risk than with us, yet we have succeeded well the past two seasons by planting timely using good sturdy plants, as soft plants from crowded frames would have a poor chance. Planting in rows will allow a better chance to mellow the soil in the spring and will make it convenient to use out every other row or every third one to give plenty of space for plants to expand for later needs. Altogether we save expense of cold frames, we get stockier plants and in bloom in time enough for general outdoor bedding.

Lancaster, Pa. D. K. HERR.

New Conservatory at Washington Park, Chicago.

The accompanying engraving is from a photograph of the new conservatory recently completed in Washington Park, Chicago. The view is of the Cottage Grove avenue front, as this view best shows the size and form of the new building. The park front will of course be much the handsomest but trees will have to be removed and other changes made before that view will be available.

The two end domes are each 53x63 feet and 32 feet high. The center dome is 59x82 and 45 feet high. The two connecting curtains are each 39x114 and 25 feet high. The contract price was $32,000. The Evans Challenge ventilators are used throughout and Mr. Kanst expresses himself as exceedingly well pleased with them.

The conservatory contains a very large amount of space and the plants formerly so crowded will not only now have abundant room but many new plants are being added. All the large palms and similar decorative plants will be planted out in permanent beds. Mr. Kanst is now very busy at this work. When the planting is completed we expect to give some views of the interior. The conservatory will be open to the public about November 1.

Some Useful Ferns.

I would like to learn through the FLORIST the names of some useful ferns, particularly for fern dishes, easily raised from spores. And where can the spores be bought? S.

The following list includes about a dozen of the most useful ferns for fern dishes, all of which are readily obtainable: Pteris serrulata, P. serrulata cristata, P. cretica magnifica, P. cretica albolineata, P. adiantoides, P. palmata, P. Victoria, Lastrea (or Aspidium) aristata var., L. opaca, L. Sieboldii, Cyrtomium falcatum, Davallia tenuifolia stricta, Onychium japonicum, and Adiantum cuneatum.

Spores of these ferns can be had from several of the large eastern seedsmen, but as the germination of such spores cannot

be guaranteed, it is usually more satisfactory to grow on a few stock plants to furnish a home supply, thus making sure of fresh spores.

In the meantime we would suggest communicating with some of the large fern growers whose advertisements appear in the columns of the FLORIST, and from whom spores of some species might be purchased for a beginning.

W. H. TAPLIN.

Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 2, 9, 16, 23, and November 6, 13, 20, 27. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than Tuesday of the week the blooms are to be shown. Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

BOSTON.—A. H. Fewkes, Horticultural Hall.

NEW YORK.—Eugene Dailledouze, care of Dr. F. M. Hexamer, Madison Square Garden.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, corner 4th and Walnut streets.

CHICAGO.—W. N. Rudd, Room 202, 185 Dearborn street.

SILVER CUP.

The Chrysanthemum Society's silver cup to be offered annually will be awarded to the best 6 varieties 6 blooms each, (36 blooms). The first cup will be competed for October 21. Competitors should forward their blooms, express prepaid, to Dr. F. M. Hexamer, Madison Square Garden, New York City. Open to all; no entry fee. Those desiring further particulars address ELMER D. SMITH, Sec'y,
Adrian, Mich.

Tulips the Second Year.

In the fall of 1895 we planted a tulip bed in October and mulched it with leaves. In the spring the leaves were removed and the bed was a decided success. The bulbs remained in the ground during summer and verbenas were planted over them without disturbing them. They were mulched with leaves as before and in the spring they were a dismal failure. The flowers were imperfect, the stalks were of different heights, and bloomed at different times. Can you give a reason?

Indiana. F. & SONS.

The treatment given by F. & Sons to the tulip was kind enough. The covering of leaves certainly did no harm and perhaps not much good. My experience with leaving tulips in the ground is that the second year they are fairly good, and as they are up and in flower before the weeds trouble them they are profitable, and after the flower is cut the second year are ready to plow under in time for a summer crop.

If tulip bulbs were costly it would pay us to lift them and perpetuate our own stock, but at the price they can be bought, especially many fine kinds for outside culture, it is far cheaper to buy every second year unless you have Chinese, Japanese or convict labor.

Soil has a good deal to do with it. If we saw the soil and its condition where the thrifty Dutchman raises the fine bulbs we buy, it would open our eyes, not only to its richness but its high state of cultivation. They put on in labor and manure more to one acre than the average American farmer does to one hundred acres (this is no exaggeration), and they take off in value more from their acre than the rural New Yorker does from his whole farm. If they did not how could they all afford a two months' trip to the United States every spring, each taking the fastest vessel to see who can get here first? I expect to hear next year that one of the enterprising firms who send over two or three drummers will charter the "Kaiser Wilhelm the Grosse" especially for them and their fine brand of cigars and silk hats. If the soil was a poor clay there would be very poor bulbs formed to give flowers for the second year. I have occasion to remind growers that almost any old soil will do to force tulips and hyacinths, but "any old soil" did not produce that bulb. It was the richest kind of soil that produced it and all we have to do is to force it out with heat and moisture.

Perhaps in the case of F. & Sons the tops were cut off as soon as the flowers were past their prime to make the bed tidy for the verbenas. This is a great mistake and is too often done. The leaves should be left to ripen naturally, for then the bulb is ripening up in proper condition to produce a good flower the next season. The Dutchmen lift their tulips every year. WM. SCOTT.

Fire Insurance.

The fire insurance committee appointed at the recent convention at Providence, issued a circular a few weeks ago asking the florists of America who desire fire insurance to signify their approval of a mutual concern by stating what amount of insurance they would expect to take if a satisfactory organization were affected. We have received a great many letters stating what amount of insurance would be taken by many firms, to the aggregate total of not over a quarter million dollars to date.

The committee is very much discouraged at such an outlook as we had every reason to believe that we would have a million dollars of applications in less than two weeks from the time we began asking for the support of those who really wanted a fire insurance concern. It is true that all who have written have been thoroughly enthusiastic upon the subject, and a great many have urged us to go on, saying they would make application as soon as the organization was effected; but we believe that there are hundreds of florists who are anxious to have this association organized, but who think it is not necessary for them to pledge their support in advance. The committee will say in this regard that they positively cannot go ahead until they have at least a million dollars worth of insurance pledged. We cannot organize until such an amount has been promised us, and it is the duty of every florist who wishes this association to be organized among the craft, to at once signify his intention to support it if it is organized. Individually the committee are not particularly anxious for this organization except for the general good of the trade, for it means a great deal of work and hard work, before the thing would be fairly on its feet and in working order.

If we are to organize we should do so at once while the subject is warm in the minds of those who are interested, and we trust that no one in sympathy with the movement will fail to send his pledge of support to one of the undersigned committee by return mail. Do not delay, as we would like to form definite organization in October if possible. Write to the member of the committee who is nearest you at once.

Committee: E. H. Michel, 1620 Olive street, St. Louis, Mo.; W. J. Vesey, Fort Wayne, Ind.; J. G. Esler, Saddle River, N. J.; E. A. Seidewitz, Annapolis, Md.; M. A. Patten, Tewkesbury Centre, N. Y.

A Decorated Bicycle.

The accompanying engraving is from a photograph of a wheel decorated by Mr. Wm. H. Stoneman, of Albany, for the recent floral fete at Saratoga. Decorations of this sort have increased during the past few years, especially in Newport, Saratoga and vicinity of New York, where bicycle parades have become popular.

Wheels are a difficult foundation upon which to place a decoration that will be neat, effective and durable. The attempts of some florists unaccustomed to the work have been anything but artistic. There is frequently an attempt to cover the whole wheel, spokes and all, which gives it a heavy, awkward appearance, and before it has been ridden any great distance a good portion of the decoration is destroyed.

The wheel illustrated was decorated to represent "America." From the beak of the gold eagle on top of the staff of the flag hang streamers of smilax and roses, and the mass of American Beauty roses on the handle bars are surmounted by a natural American eagle which carries the national colors in its beak. The American Beauty ribbon on the front of the wheel is so arranged as to be in good taste and at the same time leave the handle bars free to turn in any direction. Other details will be readily noted in the engraving by the professional eye.

New York.

BUSINESS BETTER.—A NEW SCHEME IN VIOLET GROWING.—CARNATION GROWERS COMBINE.—CHRYSANTHEMUMS COMING IN.—AMERICAN INSTITUTE FAIR.—FINE STOCK AT PITCHER & MANDA'S.—HEARING ON BOTANICAL GARDEN CONTROVERSY.—PERSONAL ITEMS, ETC.

The cut flower business has improved a little and all are grateful. There seems to be a steady demand, very moderate, but encouraging as compared with conditions that have prevailed through the past two months. Violets are now coming in regularly to most of the wholesale establishments. One of the violet growers up the Hudson has adopted a new scheme for securing favorable temperature in his greenhouses for violet growing. He puts several tons of ice in the violet houses and hopes by this means to produce more and better flowers than are otherwise obtainable so early in the season. A number of the carnation growers have deserted their commission men and combined in hopes of getting larger prices for their flowers, and will sell for their own account at the N. Y. Cut Flower Co.'s rooms on 23d street. Chrysanthemums are beginning to come in quite freely. A novelty for this early date is a row of pretty little ericas in Thorley's window.

The exhibition of the American Institute is now on at the Madison Square Garden. In the horticultural department dahlias are the leading feature this week. Very fine displays are made by W. P. Peacock and H. F. Burt. Other exhibitors in this class of greater or less extent are John Lewis Childs, Lothrop & Higgins, G. H. Hening, W. H. Smith, D. Wilson, Rev. C. W. Bolton and C. W. Ward. The latter has also a group of fine dahlias

A DECORATED BICYCLE.

grown in pots. J. L. Childs, W. H. S. Wood and J. W. Duncan are represented by large collections of miscellaneous flowers, Mr. Wood's group of fruiting shrubs being especially interesting. Carl Blomberg has a pretty show of aquatics, one of the most interesting of which is the new Nymphæa cœrulea striata. Large collections of wild flowers are shown by Carl Blomberg, A. Herrington and J. W. Duncan. Conifers from F. R. Pierson Co., edible nuts from Parry's Nursery, vegetables from Weeber & Don and others and some fine specimens of florists' inscriptions from W. C. Krick are all worth seeing.

The schedule of the plants to be offered at the great auction at Pitcher & Manda's, Short Hills, next week reads like a dictionary of gardening, so extensive is the variety catalogued. Better still is the quality of the stock which is first-class throughout and the opportunity is one that the trade will not see again for many years. For the commercial grower there are palms by tens of thousands in small and medium sizes, ficuses, ferns innumerable, stock araucarias, crotons, and no less than eight houses filled with Adiantum Farleyense, and for the private fancier there are new and rare palms, dracænas, begonias, nepenthes and other desirable things without number. Nursery stock and herbaceous plants outside are on the same comprehensive scale, there being, for instance, six thousand pæonies in three hundred varieties.

On Wednesday, 29th inst., there was a public hearing before the mayor, at City Hall, in reference to the much-discussed appropriation for the botanical garden at Bronx Park.

H. C. Hansen has bought the W. J. Thurston greenhouses at Ramsey's, N. J.

Small & Sons are contemplating removal from Broadway to 43d street and Fifth avenue.

Thos. Patch, who has been foreman at the Pitcher & Manda greenhouses for the past two years is going to take charge of the fine estate of Mr. John T. Williams at Stamford, Conn.

Bulb forcers find the dealers unable to supply them with 7 to 9 Harrisii or longiflorum lilies.

Visiting New York: Carl Blomberg, North Easton, Mass.; Mr. and Mrs. John Newman, Winchester, Mass.

P. H. Scudder has gone off for a sojourn in the woods.

Boston.

TRADE IMPROVING.—CARNATIONS PROSPEROUS.—SALE OF STALLS AT CUT FLOWER MARKET.—FALL TEMPERATURE.—A BIG AUCTION SALE.—FIRST MEETING OF THE G. and F. CLUB.—PROPOSED RECEPTION TO JACKSON DAWSON.—ANNUAL FRUIT AND VEGETABLE SHOW.—VISITORS.

Business shows a little more activity. There is an abundance of all kinds of stock, however, with the exception of carnations which are temporarily rather scarce and as the finishing up of the asters leaves the carnation in exclusive possession of its peculiar field prices have advanced, especially on Scotts and other colored sorts and there is a brisk sale for all good flowers that are received.

Chrysanthemums will soon get to work on the carnation preserves and it may therefore be taken for granted that there will be no incentive for much further advance in prices as long as the chrysanthemum season lasts. The latter are somewhat backward in appearing here as compared with some other localities. A few odd blooms are all that have been seen, as yet.

In roses, the only advance worthy of notice has been in the price of American Beauty the highest grade of which brings twenty-five dollars per hundred now. Lily of the valley has stiffened up a little, bringing better prices than it has for some weeks. There are large quantities of white Japan lilies in market but they sell unusually slowly and bring on the average not much more than one dollar per hundred.

The sale of stalls at the Co-operative Flower Growers' Market brought over thirteen hundred dollars premium, being three hundred dollars more than was realized last year. W. J. Kennedy officiated as auctioneer.

Last week the temperature dropped to within one degree of freezing on one night in this neighborhood, and farther inland there was a sharp frost, killing coleuses, heliotropes and other delicate subjects.

Ed. Hatch's big plant sale at Horticultural Hall was a record breaker. The stock was from R. Dreyer and was of excellent quality. There was a large crowd of buyers willing to pay good prices for it.

The season just ending has been an unusually favorable one for tuberous begonias in this section. The continuous moist weather and cool nights just suit them and they have been looking very handsome in the gardens.

The first meeting for the season, of the Gardeners' and Florists' Club will be held at Horticultural Hall on Monday evening, October 4. Members should attend and help to map out some useful work for the winter.

Friends of Jackson Dawson, and they are many, are planning to give him a little reception at an early date, to congratulate him on his return from abroad and to hear from his own lips some of his experiences in the old world.

The annual fruit and vegetable show of the Massachusetts Horticultural Society takes place September 30-October 1.

H. P. Kelsey of Kawana, N. C., has opened an office at 1123 Tremont Building for the sale of fancy nursery stock, galax leaves, etc.

Visiting Boston: L. C. Bobbink, Rutherford, N. J., H. S. De Forest, representing Hitchings & Co., New York, and H. Dreyer, representing A. Herrmann, New York; H. A. Siebrecht, New York.

Mr. John Crowley of Dedham has bought the Whitten place, greenhouses and land in Dorchester and takes possession on October 1. His intention is to reserve the houses, dwelling and about five acres of land and cut up the balance of the estate into house lots which will be placed on the market at once.

Philadelphia.

IMPROVEMENT ALL ALONG THE LINE.—BETTER FLOWERS.—GREATER DEMAND.—ADVANCING PRICES.—FIRST 'MUMS ARRIVE.—GOOD DEMAND FOR PALMS —NEXT CLUB MEETING.—SHOOTING AND BOWLING CONTESTS —SHUFFLE BOARD CONTEST BEGINS.—MORE BOWLING.

There is an improvement all along the line; better flowers and a greater demand at advancing prices, in fact prices may be said to have a boom on as compared with the same time last season. Three dollars was high then for the best teas, now $4 is asked for the general run and a few of the best bring $5. But the greatest change is in Beauties which touched $1.25 per dozen on October 1, last season for the best, now $2.50 is asked for specials while the best medium seem to bring readily, $2. A shorter size or No. 3 are selling for $1 to $1.50 per dozen. The lengths of stem are 12 to 15 inches, 15 to 25 inches, and specials up to 36. The Beauties are a little higher grade than last season, but the teas are little if any better. Carnations also have improved in price bringing $1 now as against 75 cents a year ago. The growers are cutting more Beauties than last year and say they have only moved up as the demand seemed to warrant it as they have less trouble to sell out now at the advanced prices than last season. It certainly looks as if this winter will be a prosperous one for both grower and dealer.

The 'mums arrived last Thursday, coming from Washington to Pennock Bros. They were fair flowers and better than the first generally are about here. Next week will see the first from the local growers, Mme. Bergmann now commencing to show color.

The palm growers report a good demand from out of town trade and a fair increase among the local dealers. The various stocks of foliage plants about this city were never more full and complete, or, we might add, cheaper when quality is considered. Palms are certainly grown better and easier, or at least it would seem so from the quantity and general excellence that prevails among the collections of the larger establishments.

The next meeting of the Florists' Club promises to be an interesting one and all should be present to enjoy it. Wm. K. Harris is to tell us whether dollar wheat will make us all rich or not the coming winter. 'William K. does not grow wheat but the products of his establishment are just as good as wheat, and threshed wheat at that. And while there may be some chaff in his remarks we are sure they will be so weighted down with grains of wisdom that all will be glad to hear him. Secretary Farson urgently desires all members to be present. The officers for the coming year are to be elected at this meeting and this will also be an attraction to many.

There was another shooting contest last Tuesday between the Chestnut Hill members of the gun club, augmented by a few from Darby Road and other sections where they shoot well, and the Germantown boys, mostly from Thos. Meehan & Sons' nursery. The Chestnut Hillers and their allies managed to win this time having things all their own way. A bowling match took place in the evening at the club rooms between teams selected from the same contestants which resulted in a most sweeping victory for the boys from Chestnut Hill. As it stands now the score is two victories and two defeats for each faction and it would really seem as if another contest, we hardly know what there is left, will have to be played to determine who shall fly the champion flag.

The shuffle board contest was commenced at the club rooms last Monday evening and proved to be a very interesting event; some twenty-four members have entered.

Another bowling contest will be started next Monday evening. New pins have been provided, those in use being found below regulation. There are three classes as in the last contest, 120 and upwards being in the first class, 108 to 119 inclusive in second class, and all below being in third and novice class. K.

Chicago.

MARKET ACTIVE.—STOCK NONE TOO PLENTY.—SHORTAGE OF CARNATIONS.—FIRST CHRYSANTHEMUMS —VIOLETS LATE.—THE CHRYSANTHEMUM SHOW.—VISITORS.

The market remains quite active. Although the weather is and has been bright, sunny and warm for the past week, stock is none too plenty. The supply in most lines is about equal to demand. In quality stock has improved greatly. Beauties are especially good just now. Prices remain about the same as quoted last week. In carnations the demand for white exceeds the supply which is much larger since asters are a thing of the past. Scott and Portia, largely from field grown stock as yet, are fine. Daybreak is hardly up to the mark yet. The field grown stock is badly off color and the blooms from stock transplanted in benches are small and short-stemmed. In whites out door Fisher is still the best, although very good McGowans may be noted. In fancy sorts a few fine Triumph and Buttercup have made their appearance.

The first lot of chrysanthemums were received September 29, one, a white, "Midge" of fairly good size for this season of the year, the other a light pink, of which unfortunately the grower, Mr. John Lang, doesn't know the name. The latter is of the type of Viviand-Morel, but lighter in color. These sold at $3 per dozen.

Last season some fair quality violets were received September 15, but this year at this writing not a good bloom has made its appearance, and the prospects are there will be none for some weeks. California is showing bud and a few crippled blooms. Most of the violet growers complain that the stock is not nearly as promising this year as last, the weather being too warm and dry to suit the violet.

The "International Competition" at the coming chrysanthemum show of the Horticultural Society ought to bring out a very interesting display. Prizes of $5 are offered for the best 12 blooms in 12 varieties from each state, territory and Canadian province, 56 prizes in all, and then there is a sweepstakes of $50 for the best dozen of all. Premium lists can be had on application to Mr. W. N. Rudd, room 202, 185 Dearborn street.

Visitors: Walter Mott, representing H. A. Dreer; J. Austin Shaw, representing Siebrecht & Son.

Mr. C. P. Hughes has again entered the ranks of the wholesalers and his familiar face is seen at the Illinois Cut Flower Co.

San Francisco.

TRADE IMPROVING.—CHRYSANTHEMUMS IN MARKET.—96 IN THE SHADE —FLOWERS IN MARKET.—MEETING OF STATE FLORAL SOCIETY.—GOLDEN GATE PARK.—PERSONAL ITEMS.

Trade has been improving steadily during the past few weeks and florists anticipate a good season. Chrysanthemums are beginning to show up now in quantity but on account of the very warm weather during the past week the size of the flowers coming in has been reduced somewhat. Whilldin, Cassagneau and Belle Poitevine are about the chief kinds coming in at present. Some fairly good Ivory have made their appearance and sell very well at good prices. They are bringing from 50 cents to $1 a dozen. The thermometer during the past week has stood at about 96° in the shade and has rapidly forced many of the chrysanthemums into bloom, but the indications now are for cooler weather when we can expect much better quality of bloom.

Asters are over for the season. The warm spell put a damper on the violets which were beginning to come along nicely, but as it is quite a lot of Marie Louise come into the market daily. They are of very excellent quality considering the earliness of the season and sell on sight at a good figure. As yet we have seen no Princess of Wales or California, in fact no single violets are in at all but they are beginning to show bud. We noted quite a quantity of the Princess of Wales violet at the different growers' establishments, planted this season in anticipation of a healthy demand for this winter.

There has been quite a steady demand for carnations lately and prices have advanced a step. Scotts bring 15 cents a dozen and Portias 12½ cents. Some days the growers do not have enough stock to supply the demand. Daybreak is rather scarce at present. Mrs. Fisher, McGowan and Redondo are also bringing 15 cents. Roses are improving steadily in quality and now some excellent buds can be seen. This is especially true of Brides and Bridesmaid of which some fine stock is coming in from the new crop. Testouts are coming into the market in small lots as also are Beauties. Some extra good Perles and Meteors also help to swell the list of roses.

Lilium rubrum and album are still coming in in small lots but the supply is almost over for this season. Sweet peas are yet to be had in small lots but there is no more demand for them. The demand for palms and ferns in salable sizes is increasing and there will undoubtedly be a shortage in the former.

Mr. F. Lindemann was a visitor at the different growing establishments in the vicinity of this city during the week.

Domoto Bros., the well known Japanese chrysanthemum growers, took a trip down to Menlo Park last week in the interest of their popular flower.

Mr. T. Thompson, the carnation specialist of Santa Cruz, was a visitor last

week and reports trade as improving in his city.

The regular monthly meeting of the Californin State Floral Society was held on the 10th inst. when final arrangements for the chrysanthemum show to be held in November, were decided upon. Emory Smith delivered an interesting lecture before the society which was well received. Mr. Smith is also to manage the chrysanthemum show. The proposed new zoo garden was also discussed. The society adjourned to meet the second Friday in October.

Mr. Chas. C. Navlet, the San Jose florist, was up durlng the week and says prospects for fall trade in both San Jose and Sacramento are encouraging. Mr. Navlet has made several alterations in his store and now has one of the handsomest stores in the state. Mr. Gus. Navlet is in charge of the Sacramento store.

M. Lynch went to San Jose on a short trip last week.

The San Mateo County Floral Society have issued a list of prizes and sent invitations to the different growers and private gardeners to compete at the chrysanthemum show which is to be held in Redwood City in October. Substantial cash prizes have been offered so we have every reason to believe that the show will be a success.

The conservatories at Golden Gate Park have been well patronized during the past two months by appreciative throngs of visitors who did not hesitate to express their delight and satisfaction at the fine display of flowering and foliage plants. The gorgeous display of bedding plants surrounding the greenhouses has also been much admired and has reflected much credit on the foreman of that department, Mr. Jos. Miln.

At Mr. John H. Sievers' greenhouses some very excellent Testout and Belle Siebrecht are being cut. Belle Siebrecht has proved a success with Mr. Sievers. His place is particularly noted for its new seedling carnations. They have many thousand seedlings, many of which have borne excellent results. Several new shades of color have been developed which will undoubtedly be heard from later. The palms, ferns and orchids are also looking excellent as also are the pelargoniums, which are one of the leading specialties. I am happy to say that Mr. Carl Kruger, the genial manager of this place, who has been ill for quite a long period, is now himself again.

METEOR.

St. Louis.

CHRYSANTHEMUM SHOW MATTERS.—HALL RENTED.—SPECIAL PRIZES.—TRADE FAIRLY GOOD.—WEATHER IMPROVES STOCK.—VARIOUS ITEMS.—BOWLING.

Chrysanthemum show matters are progressing satisfactorily. The executive committee met Tuesday afternoon and transacted a lot of business pertaining to the show. The committee have at last got favorable terms and have rented the Public School Library Building, northwest corner of 9th and Locust streets, and will use the first and second floors.

The committee will have the final program out not later than October 20 or sooner. The program will this year be printed in two colors. The special prizes up to date amount to $729 besides the Shaw prizes, which are $500 more, making a total of $1,229 in special prizes. The committee will meet every week from now on until the opening of the show.

Trade has been fairly good for the past ten days. All the retailers report good transient trade and the wholesalers also have had good trade both local and shipping, and prices have advanced a little.

Cool bright weather has had a beneficial effect on the roses, which have improved greatly in quality; fine buds, clean foliage and good long stems. Meteors, Brides and 'Maids, firsts, are bringing $4; Perles, Woottons and seconds in Brides, Meteors and 'Maids sell at $2. Beauties of first-class are still very scarce and bring $12.50 and $15; seconds $8 and $10. Carnations are not overplentiful and the price has advanced to $1.50 for the best; short stems go at $1.

A few 'mums are coming in now and then and sell for $1.50 per dozen. Violets are beginning to come in, but are pale and small as yet. Tuberose stalks and smilax are selling better. Valley very scarce, very little coming in; price $4.

Alex. Waldhart will on Wednesday, Oct. 6, at 10 a. m., sell his entire stock of decorative plants, also boilers, piping and glass.

The Riessen Floral Co. are repainting and frescoing their store at 21 South Broadway, and when finished they will have the handsomest store down town. Mr. Buechel, the secretary, returned last week from his regular summer trip and reports that business is picking up, and he expects a good season's trade.

The Bowling Club on last Monday rolled three games on the new regulation alleys at 6th and Pine streets. The alleys are 42 inches wide, 70 feet long and the pins are 12 inches apart, and we rolled 60 feet from the cock pin, something new for the boys, and a full attendance was on hand. Carl Beyer was our high man in the three games with 552, John Kunz second with 544 and R. Beyer third with 543. The highest single score was also by Carl Beyer, 217; R. Beyer second, 197; and Kunz third, 191. We roll again at the same alleys next Monday night.

J. J. B.

Buffalo.

BRIGHT WEATHER —SHORTAGE OF FLOWERS.—FROST SEPTEMBER 28.—LESS CARNATION RUST —A FEW INFALLIBLE CURES. —VISIT TO PROF. COWELL.—VISITORS.

If fine bright weather could make fine business we would have it, but we won't grumble; it appears better than it really is because flowers are by no means as plentiful as they were. In the vicinity of Buffalo there was 5 degrees of frost on the 28th; that settled asters, gladiolus and the rest of the outside truck which has hardly paid for freight charges. Carnations of good quality are scarce and those that are good sell well.

Home grown roses are good. I noticed in the windows of W. J. Palmer & Sons several thousand Meteors; they made a fine show; also a plentiful supply of fine violets. We expect to cut a few dozen fine yellow 'mums on Saturday, October 2. The hour is not yet determined on, but the date is early; of course the variety is Messrs. Dailledouze's grand yellow, Merry Monarch, or is it Yellow Monarch? Anyway it is the fine sport sent out by these gentlemen last spring.

I am glad to say that from what I have seen there is less of the carnation rust this year than for several years past. This happy condition is the result of persistent application of "sulphide of potassium," sulphate of copper, Bordeaux mixture dry, ditto ditto liquid, arsenic, sulphur on the pipes and several other infallible cures; take your choice.

We made in company of some genial friends a short visit to Prof. Cowell and his botanic garden. It is getting to be a very interesting place, especially for the botanical student. What takes most with the mob is a very fair specimen of Victoria regia; its fine leaves are close upon 6 feet; an inverted one showing the wonderful structure of the under part is of great curiosity to the public. The victoria has had a number of flowers. No attempt at showy flower gardening is made here, but at one of the smaller parks known as "Cazenovia," named after an Indian, who was named after a creek, the flower gardening is most admirable and put in just the right place; there is about an acre of it. But of all the floral gems and pretty vistas of this place none are so bewitching as the smile assumed by the professor when he asks you to go across and see a man.

Mr. Nellson, of Tarrytown; Mr. Mott, of Riverton, and Mr. Atkins, of Short Hills, all gave us a call last week. They looked happy and all said business was decidedly mending.

W. S.

Baltimore.

CLUB MEETING —EXHIBITS.—QUESTION BOX. —TRADE ON THE MEND.

At the club meeting Mr. Conrad Hess showed a beautiful bunch of his carnation Baltimore, the color, shape and size being strictly first-class and the stems as stiff as could be desired. Mr. C. M. Wagner exhibited a pink seedling carnation, No. 4, slightly lighter than Scott, about as double as Uncle John, and fully three inches in diameter; strong scent, very stiff, erect stem and perfect calyx. Mr. Richard Vincent, Jr., brought out a collection of dahlias containing a number of very attractive varieties which to the regret of many present were not labeled with their names.

The recommendation of the executive committee that some member be appointed at each meeting to open the discussion at the next ensuing meeting was adopted and Mr. Richard Vincent was appointed to open at the next meeting. The question box being opened, the following questions were read: Has anyone used Jadoo fibre? Mr. C. M. Wagner had used half a ton of it and found it made a very remarkable improvement in roses. Did not find chrysanthemums do any better in it than in soil.

Is the change in the name of the Society of American Florists of any benefit? Mr. Richard Vincent said it was done for the purpose of obtaining a national charter, but he doubted whether it would be of any advantage, unless in the case of the accumulation of wealth, which they could not hold without a charter. Being requested by the president to say what had been done with the resolution entrusted to him to deliver to the S. A. F., Mr. Vincent stated that nothing had been done with it.

What material makes the best liquid manure, and how soon should it be used after planting in fresh soil? Mr. C. M. Wagner said he would defer using it until plants needed it. After considerable talk on the subject, during which cow manure and chicken manure seemed leading favorites, Secretary Flitton closed with the opinion that different soils and plants required different manures, but no plant should have it until the roots were fully developed.

Trade in cut flowers is undoubtedly on the mend. Good roses are scarce. Roses of any kind are not plentiful. Prices are very unsettled and will probably remain so till after the chrysanthemum season.

Mr. Charles Hamilton is around among the boys again, as cheerful as ever and the

picture of health. The severe surgical operation he had to undergo has not impaired his spirits in the least.

MACK.

Toronto.

THE TARIFF —DIFINITION OF AN AMATEUR. —ARRANGEMENT OF EXHIBITS —CHRYSANTHEMUM SHOW NOVEMBER 10 TO 13.

It seems as if it would be necessary for a deputation of gardeners and florists to go down to Ottawa and interview some of the tariff legislators down there. The "florists' stock" clause in the free list has been badly bungled. "Bulbs, corms, tubers, rhizomes" are emunerated and then they must needs enumerate "spiræa and lilies of the valley" too. Palms and araucarias are free but azaleas and orchids are left out and must pay 20% ad valorem, neither of which are or are likely to be raised in this country. It is said that a prominent seedsman is responsible for inducing the Government to take azaleas off the free list. It works in this way: Buyers of large quantities can get them at considerably reduced prices in Europe, and can therefore have them laid down here at a much lower price than the small buyer can possibly do. The big man pays less for his plants, pays less duty per plant, and probably gets a lower rate for transportation. It was ever thus; what business has a little man to exist any way?

The directors of the Horticultural Society think they have succeeded in defining an "amateur horticulturist." The definition certainly reads as if there was no loophole for any one but an amateur to get in but it is astonishing what some people can do, will do and do do. It will be made public property at the next regular meeting.

I am glad to note in a contemporary that the Montreal G. and F. Club are going in for artistic taste in arrangement of exhibits at their next chrysanthemum show and are giving up as far as possible what may be called sectional staging. This is as it should be, but it is not easy to do so that the exhibits can be fairly judged. It has always seemed to me such a pity that with a large assortment of the best plants and flowers altogether, a better show from an artistic point of view can not be arranged.

The association here has gone some way in this direction, but there is plenty of room for improvement yet, and I hope to see some progress at our coming show. The dates of the show are the 10th, 11th, 12th and 13th of November; this will not as far as is known include Thanksgiving day but includes a Saturday.

The weather last week was fine and warm; it is a long time since any quantity of rain fell and the ground is now very dry and hard.

E.

Cleveland.

SHORTAGE OF GOOD STOCK.—SLIGHT IMPROVEMENT IN BUSINESS.—FIRST CHRYSANTHEMUMS —CLUB MEETING.—BOWLING CLUB FORMING.

About the most noticeable feature in the local cut flower trade at present, is the notable shortage of good stock. There has been some slight improvement in business of late, and this, combined with very cool weather after the hot spell in the early part of the month, which forced nearly everything forward at an unnatural rate, has brought the first mentioned condition. Roses, perhaps, are in the best supply and are coming of very fair quality. Carnations are not plentiful and sell at from $1 to $1.25 per 100. Dahlias and gladioli are rather off in quality, probably owing to the unusually dry weather we are, and have been, having so far this fall. The gladiolus supply is also diminishing rapidly as to quantity as well.

Everybody is interested in the chrysanthemum just now and the development of the flowers is closely watched. Gasser had the first in his window the other day.

Several matters of interest were disposed of at the club meeting, September 28. The election of officers for the ensuing year resulted in the selection of the ticket mentioned in the last notes. It was also decided to move the headquarters to Progress Hall where various amusement facilities can be provided with more convenience than in the present location. A good list of names was also entered for the bowling club. Any who desire to join this would do well to send in their names at once. Some preliminary matters in relation to the coming chrysanthemum show were also disposed of.

In town: Mr. Nelson, representing F. R. Pierson & Co.

A.

St. Paul.

TRADE IMPROVING SLOWLY.—INCREASED CALL FOR PALMS, ETC.—LIGHT FROSTS. —VARIOUS ITEMS.

Trade is improving slowly. Cooler weather has a tendency to bring the buyers home, while the usual number of fall weddings and an unusual amount of funeral work have helped to increase sales. Stock is of good quality and the supply about equals the demand. In roses, white and pink and American Beauties are in best demand. Carnations are more plentiful and of better quality, and are eagerly sought after. 'Mums and violets have not yet made their appearance, though there are calls for them daily. Outside stock is about all gone. A few sweet peas and some dahlias are the only stock being brought in.

One noticeable feature in this year's trade is an increased inquiry for palms, rubbers, cyperus and other ornamental plants. Pink and other colored flowers are being used quite extensively in funeral work.

Mr. Haugen, formerly of Haugen & Nilsen, has rented the range of houses on Hague avenue owned by E. F. Lemke.

L. L. May & Co. are moving into their new quarters.

Travelers in town: H. A. Bunyard, Short Hills, N. J.; C. Ford, Jr., representing A. Hermann; J. Austin Shaw, the Brooklyn bard; Mr. Spiro, New York; Mr. Massey, Dayton, O.

A. S. Swanson recently returned from an Eastern trip including Buffalo, Toronto, Brampton and other floral centres.

FELIX.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By young florist. Good references. LOUIS FLINDT, Columbus and Monroe Sts., Sandusky, O.

SITUATION WANTED—Man as foreman, by a first-class grower and designer; 32 years; single. Good references. A Z, care American Florist.

SITUATION WANTED—By florist thoroughly experienced in all branches of this business, in private or commercial place; German, single, age 27. Address GARDENER, care Am. Florist.

SITUATION WANTED—As stenographer by a young woman with a practical knowledge of the florists business; willing to be generally useful; references. Address STENOGRAPHER, care Am. Florist.

SITUATION WANTED—By all-round florist, good propagator and designer; roses, carnations, violets and mums; good references. IRA P. HERSEY, 24 Atwood St., Newburyport, Mass.

SITUATION WANTED—As gardener; single, German; 20 years' experience in all branches; sober and reliable. First-class references. Private or commercial place. F S, care American Florist.

SITUATION WANTED—By young man, age 21, in a first-class commercial place, where cut flowers are made a specialty; east preferred; references the best. Address A, care Carl Ebrmann, St. Matthews, Jeff. Co., Ky.

SITUATION WANTED—As foreman, west preferred; general stock, single, American, age 26; do not use tobacco, drink or swear, designer and packer; salary $75; references given and asked METEOR, 1110 C Ave. East, Oskaloosa, Ia.

SITUATION WANTED—As foreman by able florist, 30 years' experience in this country and Europe; will give satisfaction in every branch of the florist business. Can give the best of recommendations. Address S C. American Florist, Chicago.

SITUATION WANTED—By single Englishman to manage private or commercial place. Life experience in all branches including orchids. Well up in floral decorations of all kind. Thoroughly sober and reliable. State wages. Address PRACTICAL, care Jos. Breck & Sons, (Seed Dept.), Boston, Mass.

WANTED TO RENT—About one acre of asparagus from 3 to 6 years old Pays good rent. P. Glen View, Ill.

WANTED—Man capable of taking full charge of branch store, accustomed to first-class trade. J. LOUIS LOOSE, 12th & F Sts., Washington, D. C.

WANTED—In middle states, an experienced foreman for place with 30(000 feet of glass. Wages $100 per month. HUSTLER, care American Florist.

WANTED—An active young man with slight knowledge of greenhouse work; a youth wishing to learn preferred; state age and particulars. THE BOOL FLORAL CO., Ithaca, N. Y.

WANTED—Practical florist, cut flower and general stock; 7000 feet of glass. Want good steady man—no "expert". State wages wanted. W. J. BARNES, 38th & Euclid Ave., Kansas City, Mo.

FOR SALE—Store and four greenhouses each 14x100 well stocked; good location in Chicago. Address CARL CROPP, care Vaughan's Seed Store, Chicago.

FOR SALE—At less than half price, 1 Eureka heater, good as new; also a quantity of piping, 1¼-inch, 1-inch and ½-inch; also pipe fittings; a great bargain if sold at once. Address WM. G. WHITE, Ovid, Mich.

FOR SALE—In Warren, R. I., 5 greenhouses, nice 6-room cottage, barn, sheds, shops, etc.; about 10 acres of good land; young orchard, shade trees and grapevines. Greenhouses and cottage heated with hot water. Windmill supplies water over the premises. Can be bought on easy terms Apply to O. H. NYE, Warren, R. I.

FOR SALE. AN ESTABLISHED BUSINESS.

Man of capital or party desiring to organize a company can step at once into an established business, known throughout United States, and with good connections in other countries. Good will assured. Present owner will remain for two months if desired. Compelled to sell on account of failing health. The business for the next twelve months with proper management should net $2500, and by exercising sound common business sense, same can be increased to $4500 or $5000. Full investigation will be permitted to prospective purchasers, if they show they mean business. Please address with some particulars. C. S LODER, 271 Broadway, New York.

Foreman Wanted.

First-class grower and propagator of all kinds of plants; one who can handle men and has good business ability. Give full particulars, references, experience and salary expected. Address **Reliable,** care W. J. Stewart, 67 Bromfield St., Boston, Mass.

Salesman Wanted.

First-class, reliable salesman with good knowledge of seed, bulb and general plant business. Apply with full particulars, experience, references, salary or commission expected, to **Hustler,** care W. J. Stewart, 67 Bromfield St., Boston, Mass.

Cincinnati.

CARNATIONS SUFFERED FROM DROUGHT — BUSINESS FAIR AT THE STORES BUT DULL AT THE MARKET.—FIRST CHRYSANTHEMUMS —VISITORS.

One of the dryest spells experienced this season is now upon us. All outdoor stock has suffered greatly, especially carnations, and they do not average as well as last year. There was a fair demand for choice cut flowers owing to the Jewish New Year, which was appropriately celebrated Sunday and Monday with ceremonies at the various temples.

Our store men report fair business the past week, but the market florists complain very much. The sixth street market continues to be flooded with outside stock such as gladioluses, tuberoses, asters, etc. It is not safe to give quotations on this kind of stock. Roses and carnations sell fairly well. Messrs. George & Allen are bringing in new valley, which is excellent for this time of the season. Their Am. Beauties, as well as teas, are very fine and promising.

Mr. E. G. Hill came in with some chrysanthemums last week, the first of the season. They were rather small and soft yet, and a few days more growth would benefit them. Mr. S. M. Harbison, of Danville, Ky., was a caller. Mr. Aug. Kohlbrand, of Chicago, has been visiting his parents here of late. H. SCHWARZ.

BENTON HARBOR, MICH.—The Twin City Floral Co. of this city has filed articles of incorporation. The capital stock is $5,000, all paid in. The stockholders are James H. Brumby 100 shares, Harry S. Gentle 399 shares, Samuel Gentle 1 share.

LYNN, MASS.—The Houghton Horticultural Society held its 21st annual exhibition at Odd Fellows' Hall on Tuesday and Wednesday, September 28 and 29. The exhibition was eminently successful and was followed on Thursday evening by the annual festival, at which provision was made for 500 guests.

Her Father is a Florist.

Her lips would for carnations stand,
Her brow is like the lily,
Her cheeks are blooming roses, and
Her ears would knock pinks silly.
Yet 'tis but nature's symmetry
That all these gifts I've chorused
Belong to her, because, you see,
Her father is a florist. —*Ex.*

Proposals for Seeds.

The following adv. appears in the daily press:

PROPOSALS FOR SEEDS—DEPARTMENT of Agriculture, Office of the Secretary, Washington, D. C., September 27, 1897.—In accordance with the appropriation act of April 23, 1897, which authorizes the purchase and distribution of valuable seeds, trees, bulbs, plants, vines and cuttings by the U. S. Department of Agriculture during fiscal year ending June 30, 1898, the department is now prepared to receive from responsible dealers in, and growers of, seeds, proposals for supplying field, flower and vegetable seeds and such other articles as are enumerated above; the seeds to be delivered in bulk in the city of Washington, D. C., in such quantities and varieties as the secretary may elect free of all freight or transportation charges. Proposals must state the name of each variety of seed offered and the price per pound or bushel in each and every case. Proposals are requested for different choice varieties of the following named seeds: Beet, Cabbage, Carrot, Celery, Cucumber, Egg Plant, Lettuce, Cantaloupe, Water Melon, Onion, Parsnip, Radish, Rutabaga, Squash, Tomato, Turnip, Beans (garden), Peas (garden) Corn (sweet), Tobacco, Australian Salt Bush, Cotton, Corn (field), Cow Peas, Canada Field Peas, Vicia Villosa, Alsike Clover, Alfalfa, Bermuda Grass, Lawn Grass, Mangel Wurzel, Kidney Vetch and choice varieties of Flower. Proposals must be addressed to the Secretary of Agriculture at Washington, D. C., and received at the department not later than October 5, 1897. JAMES WILSON, Secretary.

BOSTON.—W. W. Rawson & Co. have begun to move into their new quarters at 12 and 13 Faneuil Hall Square, and expect to be in full running order by October 15.

MILFORD, CONN.—A stock company with a capital of $10,000 has been formed, to be known as the Everett B. Clark Company and to be located in the town of Orange for the business of seed growing.

VISITED CHICAGO: Geo. A. Crocker, of Crocker Seed Co., Minneapolis.

COLUMBUS, O.—The annual meeting of the American Association of Farmers' Institute managers will be held here October 27 and 28. The program has been issued and copies may be had by applying to the secretary, Mr. F. W. Taylor, Lincoln, Neb.

Rochester, N. Y.

TRADE SATISFACTORY.—CARNATIONS RATHER SCARCE.—ROSES OVERABUNDANT.—NO SEVERE FROST YET.

The trade in cut flowers has been quite satisfactory for the past week considering the time of the year. Most people are now returning from the watering places and summer resorts and consequently more flowers are used. Small weddings in and around town are frequent and they always create more or less demand. The decorations for fall openings in our principal drygoods stores were as extensive and elaborate as ever before and although the proprietors are not willing to pay the highest prices on such occasions, the florists can well afford to furnish plants, flowers and the necessary labor at a lower figure during the duller season of this month than they could at any other time.

Carnations are still rather scarce in the market, roses not over-abundant. Asters are past their best; last week an immense quantity was used up in one way or another and now good flowers are scarce. Dahlias are plenty yet, for we have had no severe frost so far, though we may look for it any night. The violets which are offered here and there in the stores have improved but do not show their full size as yet. Anemones and other out door stuff are very plenty but the long continued dry weather has injured the quality.

Plant trade is about like last week's; the principal call is for the smaller sized palms which retail at from $1 to $2.50 or $3. Very few larger plants have been sold this fall but hopes are entertained that later on there will be a demand for the higher priced specimens. K.

Knoxville, Tenn.

Business has been remarkably good all through the summer and the yellow fever scare has not lessened it in the least. C. W. Crouch has been very busy for some time improving his plant. He has pulled down and rebuilt 3 rose houses 100x18, 1 fern house 70x20, built a new palm house 100x18, propagating house 100x10, violet house 100x10, two greenhouses 100x18, and expects to add two more before the winter.

Messrs. Richardson & Co. have retired from business and have disposed of their glass, boiler and pipes to Mr. Crouch. W.

LENOX, MASS.—At the next meeting of the Lenox Horticultural Society, Mr. J. F. Huss will read a paper on ferns. There will be an exhibition of ferns, orchids and miscellaneous plants and flowers. For October 16, there will be an exhibition of roses, vegetables, fruit, etc., and Mr. E. Jenkins will read a paper on roses.

HARTFORD, CONN.—The September exhibition of the Conn. Horticultural Society was held at Good Will Hall last week. Plants, fruits, flowers and vegetables were shown in more than usual quantity and the displays were very fine. W. B. May, T. J. McRonald, Mrs. A. Trask, Robert Patchet and J. Albison were the principal contributors of flowers and plants.

ROSES. Extra fine stock, clean and healthy.

GEO. HANCOCK & SON, Grand Haven, Mich.

Pekin, Ill.

"There is no doubt about it," remarked Mr. Geo. A. Kuhl to your correspondent during a recent visit to his place, "that a revival of business has set in which promises a gradual and steady improvement." Situated in the very midst of the agricultural district and being a man of a penetrative turn of mind and of sound business judgment, Mr. Kuhl's words are certainly significant.

That Mr. Kuhl entertains the most sanguine hopes as to the future outlook is further attested by the extensive improvements that have been going on at his own place during the past three months. His entire plant has been thoroughly overhauled and remodeled and four additional houses, each 22x58, have been recently built. All told, Mr. Kuhl has 19 houses, covering over 50,000 square feet. A stroll through Mr. Kuhl's greenhouses was a treat long to be remembered, for never have I beheld stock at this season of the year in as fine condition. The ten houses of roses, comprising the best standard varieties, are doing splendidly, the stock looking clean, healthy and vigorous. His carnations are likewise in the pink of condition, while the chrysanthemums promise to excel any of his previous efforts.

The benches in the carnation houses are 6 feet wide, the bottoms of tiling on iron supports. They were evidently made to last.

Mr. Kuhl has recently returned from a pleasant trip to Mackinaw Island.

HOMO.

Greenhouse Building.

Stoughton, Mass., Frank Howell, one small carnation house.

Receiver's Sale!

THE ENTIRE STOCK OF PLANTS OF

PITCHER & MANDA, at Short Hills, N. J.

Will be offered for sale without reserve on **October 4th, 5th, 6th and 7th,** next. The stock consists of over **100,000 PALMS IN SPLENDID CONDITION,** in such standard varieties as **Areca Baueri, Areca lutescens, Cocos Weddeliana, Kentia Belmoreana, Kentia Forsteriana, Latania borbonica, Phœnix reclinata, Livistona rotundifolia, etc., etc. ALSO the finest stock of Adiantum Farleyense ever seen in this country,** and a general assortment of other **Ferns,** as well as a very fine lot of **Ornamental Foliage Plants** containing many choice things not to be found elsewhere.

Together with all the greenhouses, packing sheds, etc., and all the real estate, which will be sold in four distinct parcels as follows:

No. 1. Contains about 10½ acres, on which are located all the greenhouses, about 80,000 feet of glass, all in excellent condition; a good dwelling house, containing eight rooms; stable, store rooms, packing sheds, several hundred sash and frames, etc., etc. This is a specially favorable opportunity to purchase a well established Florist and Nursery business at a greatly reduced price, within three minutes' walk of the railroad station, and eighteen miles from New York City.

No. 2. Contains about 3 acres, with a good dwelling house on it, within 500 feet of the railroad station.

No. 3. Contains about 6½ acres, now used as an Herbaceous Nursery, and is well stocked with the largest and best collection of these plants in the country. Close to railroad station.

No. 4. Contains about 62 acres, well adapted for an excellent Nursery, Farm, or to cut up for building lots. This is situated on the main road between Short Hills and Summit, and one mile from each station.

☞For Catalogue containing full particulars write to

R. KILBOURN, Clinton, N. Y.

Louisville, Ky.

F. Walker & Co. had quite a large decoration last week for one of the largest dry goods houses in the city. The building was effectively decorated from the basement to the 4th floor with goldenrod, palms and flowers, for which F. Walker & Co. deserve great credit.

The Louisville florists have been doing quite a large business in cut flower work the past week for the different openings of dry goods and millinery stores. Since the cool weather business has been very good.

Mr. Paul Berkowitz, of Bayersdorfer & Co., was in the city a few days ago and says that trade is very good.

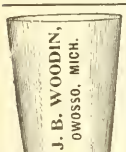
Mr. Julius Buser has added to his large plant two new houses which are full of Beauties, Meteors and carnations. His entire stock is looking fine.

Mr. Louis Kirch has a fine lot of carnations this year, much larger and better than ever before. He expects to realize quite a good bit on his stock this fall and winter. Mr. Kirch says he thinks business will be good from now on as the weather is in the growers favor.

All the florists are kept busy now and the dull season is about over.

FRED HAUPT, Sec'y Ky. S. of F.

Des Moines, Ia.



Trade is some better at this writing than for the past month, but not up to normal yet.

Our state fair was held last week. The display of plants and cut flowers was good considering the dry season. The premiums are not large and outside florists did not exhibit.

The annual picnic of the Des Moines Florists' Club was held September 23 at Union Park, and although late in the season the weather was fine, mosquitos also. Twenty-four sat down to the supper, which was so bountiful that some wanted to come back next afternoon on condition that the ladies would provide as bountiful a feast. Several firms were not represented at all.

Carnations are nearly all housed and looking fairly well. 'Mums are late, but promise good results. J. T. D. F.

POUGHKEEPSIE, N. Y.—The great Dutchess county exhibition will be held at the Armory in Poughkeepsie on November 3, 4 and 5. A very large number of special premiums have been contributed, a list of which may be obtained of the secretary, W. G. Gomersall, Fishkill-on-Hudson.

The Right Cypress for Greenhouse Material.

Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we can not afford to jeopardize. We send out the best only.

OBITUARY.

WILLIAM A. STILES, one of the park commissioners of New York City, and formerly managing editor of *Garden and Forest*, died October 6 in Jersey City, N. J., of cancer in the stomach.

Mr. Stiles was 60 years of age and a bachelor.

GENEVA, N. Y.—The large safe in the office of the W. & T. Smith Nursery Co. was blown open on Thursday last by burglars. Forty dollars was the amount of the plunder taken.

Rose Notes.

There are few if any positions in a rose growing establishment so hard to fill satisfactorily as that of night fireman. He should be a combination of mechanic, florist and fireman, and should be the essence of faithfulness, honor and trustworthiness, and above all a sober man; if not quite up to the standard as a mechanic, etc., we may get along fairly well provided he has good sense, and is sober and trustworthy, but the latter qualifications are absolutely essential. A poor grower may spoil a house or two of rosss through his negligence or incapacity, which is bad enough, but a fireman addicted to intemperance, or one that is not faithful to duty may fall asleep at his post, and going out in the morning we may find the work of months destroyed. At least two such cases have come under my observation and I always feel very happy if I have a fireman who can be trusted implicitly.

There are several devices that have been tried more or less for checking the fireman and minimizing the risk in the event of neglect on his part. One of the best that I have seen is the watchman's clock, a very ingenious piece of mechanism that he carries with him when making his rounds. In the center of the clock and exposed to view only when the clock is opened (a difficult feat except with the proper key) is a kind of roller which revolves once in twelve hours. To prepare it for use a narrow strip of paper the proper size is wound round the roller and made to adhere to it, the paper is lined horizontally and vertically, 12 vertical lines to indicate the hours, and the horizontal ones to correspond in number with the number of greenhouses. It is fitted with as many keys as there are greenhouses, all dissimilar, and these are chained to a post close to the thermometer, one in each house; the watchman making his rounds takes the houses in rotation and after looking at the thermometer inserts the key and gives it one turn, and so on through all the houses. The turning of the key punches a hole in the strip of paper on the line corresponding to the number of the greenhouse and in the proper hour column so that when the clock is opened in the morning we see at a glance how many times, and the hour at which each house was visited. I know from experience that he is a very smart man who can skip his work and escape being given away by the watchman's clock.

Another tell tale is the thermostat and electric bell, a simple and comparatively inexpensive arrangement operated by a small battery. The thermostats, one in each house, can be set at any temperature to suit the plants and in case the temperature of any of the houses goes beyond the maximum or minimum at which the thermostat is set the alarm goes off and will keep on ringing until the conditions are changed or the current is switched off. With this system working properly cooking or freezing is entirely out of the question.

Another and more simple test of the faithfulness and veracity of the fireman can be made by having a few self-registering thermometers secreted here and there among the bushes, shifting them every day and when we are compelled to complain of the uneven temperature it will be very easy to furnish the proof. Of couse a thoroughly reliable and conscientious man is worth infinitely more than any or all of these devices, and with such a one they will not be necessary, but most of us will be compelled to admit that we have no great superabundance of faithfulness, and we sometimes find the least at the critical moment where we expected to discover the most.

It is a mooted question how large a place must be in order to afford a regular fireman. I think that any concern boasting 25,000 square feet of glass may not simply incur the expense but will actually save money by having a night man; there will be a considerable saving of fuel, and the greenhouse men being relieved from night duty will do much better work during the day; but above all the uniform temperature as a result of continual watchfulness must help materially to improve the stock and quality of the bloom.

It is well to have at least two thermometers in each house and in very long structures one to every hundred running feet; they should be encased in neat wooden boxes to shield them from the sun and to secure a correct indication of the actual temperature. For the benefit of the fireman whose memory need not be taxed unnecessarily, and the man in charge during the day whose memory will be refreshed wonderfully by it, it is well to mark plainly on a piece of card board and have the latter in a conspicuous position near the thermometer the temperature required during the night, the mean day temperature in cloudy weather, and the minimum and maximum of heat desirable when the sun shines.

ROB'T SIMPSON.

FISHKILL, N. Y.—J. G. Burrow has sold his business to Trowbridge & Holmes, who will continue it.

Some Flatbush Carnation Growers.

The Flatbush carnationists are all through with their planting and the interior of the houses already begins to look very attractive, especially in the earlier planted houses, which are now densely crowded with buds. The plants have done splendidly in almost every case, and there is no doubt that the reputation of this section for fine carnations will be fully sustained in the coming season. Lizzie McGowan is still the favorite white judging from the overwhelming proportion in which it is planted. A good many Harrison's White are seen. As compared with Scott this white sport appears to be a much later bloomer. Scott is now thickly set with buds, while Harrison's White planted at same time and given similar treatment shows only an occasional spike. The peculiar characteristic of Scott in coming semi-double early in the season is noted also in its white relative. Eugene Dailledouze remarks that the earlier Scott is planted the more single flowers it will throw.

Dailledouze Bros. have had a fine new iron frame house erected this season by Lord & Burnham. It is 200 feet long with glass front and back bevelled and butted up against the roof glass. Scott is the variety most largely planted at this establishment. There is a full bench of Graham's Victor. They like it very much and find it equally popular with the store men. Of Minnie Cook there is almost an entire house in fine shape. One good feature noted by Mr. Dailledouze regarding this variety is that, as with Helen Keller, everybody cannot grow it. A few Ivory have been planted for a further trial. This variety was not quite satisfactory last season. Flora Hill has been producing some very fine, large blooms and proves to be an excellent keeper. The only dark variety grown here is a seedling which is giving at this early date a fine crop of flowers. Hector is the favorite scarlet. C. A. Dana, Mayor Pingree and other recent introductions, as well as a large number of seedlings, are all being given a thorough test.

Waning popularity and falling prices for chrysanthemums have had their effect here as elsewhere and Dailledouze Bros. have planted one-third less than last year. Bergmann is now being cut and the flowers are very large. A handsome promising yellow is Mrs. Trainor L. Parks, the stock of which is controlled by Messrs. Dailledouze and Ernst Asmus. It has a grand habit and blooms a little ahead of mid-season. Major Bonaffon shows up well, as it always does. The only drawback to this superb variety lies in its brittle foliage, which breaks badly in shipping.

McGowan looks as well if not better than ever before at Suydam's. Here is also seen a pretty sport from McGowan of peachblow color, a lovely flower. Equally interesting is a deep colored sport from Scott, nearly as dark as Tidal Wave. This is planted in considerable quantity and seems to take well with the New York retailers. Harrison's white has made big healthy looking plants with Mr. Suydam but very few flowers as yet. It may be more satisfactory later on. Sebic is grown as the best crimson here. A house of McGowan planted July 1 is now in heavy crop.

Two new additions to the ranks of the carnation growers are W. W. and C. Kouwenhoven who up to this season have been forcing vegetables but have been compelled by the low returns to make some other use of the houses and have turned them into carnations. At C. Kouwenhoven's there are three houses of carnations and one of mignonette. Finer carnations it would be hard to find, and this is usually the case when carnations are given a chance at the fine old rich soil that has been used for lettuce and cucumber forcing. One house of Scotts that was planted Easter week, the sashes having been taken off all summer, is a beautiful sight at present. McGowan, Daybreak and Portia also look well. W. W. Kouwenhoven grows the same varieties and they are equally promising.

Over at Woodhaven McGowan has found another congenial spot at Reimels' where in a soil composed entirely of sand and manure it seems to revel. The soil is so light that the plants cannot be staked, as the stakes will not hold up right. One half of the stock of the dark Scotts seen at Suydam's is held by Mr. Reimels, and it looks equally well.

Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 2, 9, 16, 23 and November 6, 13, 20, 27. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than Tuesday of the week the blooms are to be shown. Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

BOSTON.—A. H. Fewkes, Horticultural Hall.

NEW YORK.—Eugene Dailledouze, care of Dr. F. M. Hexamer, Madison Square Garden.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, corner 4th and Walnut streets.

CHICAGO.—W. N. Rudd, room 202, 185 Dearborn street.

SILVER CUP.

The Chrysanthemum Society's silver cup to be offered annually will be awarded to the best 6 varieties, 6 blooms each (36 blooms). The first cup will be competed for October 21. Competitors should forward their blooms, express prepaid, to Dr. F. M. Hexamer, Madison Square Garden, New York City. Open to all; no entry fee. Those desiring further particulars address ELMER D. SMITH, Sec'y,
Adrian, Mich.

Gloxinias.

Please tell us how to grow gloxinias in the greenhouse. We could grow them before we went into business, but can't succeed now. They start nicely and bud, then leaves and buds drop and they rest a while, then start up and repeat the same process again. We are careful not to wet the foliage in watering. W. H. G.

The treatment of the gloxinia has often been written up in the FLORIST. It is simply to start in February, March or April; till they form leaves they need but little water, and as they grow in size they need a higher temperature, for they are a truly tropical plant. They can be started in a temperature of 55° to 60°, but will grow and flower better in their normal temperature of 75° or higher. When leaves are well developed they want plenty of water, and if allowed to suffer for want of it will soon show it.

The amount of light or sunshine that a gloxinia needs is perhaps the most particular part of their culture. If we used the style of shading that is generally used in Europe, viz., a rolling cloth of some kind which would shade when the sun was shining brightly, and when not there would be no shade; it would be right for gloxinias. A dark whitewashed house is not the place for a gloxinia, neither is a house where the full rays of the sun are unobstructed. A rather coarse soil that will let water pass freely through is best and you are perfectly right in not letting the leaves get wet, especially on a dull day.

I have seen evidence this summer of what I have often stated, that the gloxinia is one of the very best summer flowering house plants, the dry air of a room and the perfect light of a north window suiting it better than a greenhouse.

WM. SCOTT.

Floral Arrangement at the Hamburg Exposition.

While at Hamburg our correspondent secured a number of photographs of the leading exhibits in the way of floral arrangements. While many of the arrangements are open to criticism from our standpoint, some are really good and all will undoubtedly be of interest. Others will appear in succeeding issues.

AN EFFECT IN RED.

This arrangement impressed Mr. Berterman very favorably, and he thought the red effect very beautiful. The basket is of birch bark and the flowers are anthuriums, amaryllises, and red carnations. Croton leaves and red berries are also used, and the vase finished with a bow of dark red ribbon.

BRIDAL OUTFITS.

The head wreaths were of German myrtle with either orange blossoms (artificial) or myrtle blooms. The hand bouquets were of roses (badly wired) and valley, some with eucharis and bougainvillea. Most of them rather clumsy from our standpoint.

Miscellaneous Seasonable Hints.

POTTING SOIL.

Before you get the fall rains which must come don't neglect to put away in the dry your winter and spring supply of potting soil. We do forget it or neglect it sometimes and the months of March and April find us running round willing to give a good many dollars for a few loads of good soil. That taken in wet in the fall and stored in a shed will take all winter to dry, so get in that most necessary of all your materials, good soil, when it is dry and in a proper condition to handle.

LIFTING ROOTS AND BULBS.

There is no need of lifting such roots as cannas, caladiums and gladioluses directly

An effect in red.

FLORAL ARRANGEMENTS AT THE HAMBURG EXPOSITION.

their tops are cut with the frost, but don't let the frost get near the root. It seems almost certain that gladiolus bulbs will sometimes survive our winters if buried by accident a foot or so below the surface, but for all that they won't stand a degree of frost when dug up and exposed. So don't leave them to dry in the frosty nights as I have seen done and many thousand fine bulbs ruined. Where you can keep potatoes will do for gladiolus. Those that have no better place to store cannas and caladiums can put them under a rose house bench, but not on the moist ground; place them in flats or on boards. Caladiums will winter finely in this place, and so will the cannas, but don't let the drip of the bench fall on them; it must be kept off in some way. The drip will most assuredly ruin a large proportion of your canna roots.

HERBACEOUS PLANTS.

It is a most proper time now to do any planting or transplanting of herbaceous plants. Such plants as pæonies, phloxes, pyrethrums, in fact all the well-known plants of this class will move now with perfect safety and you will have less time to do it in the spring. The plants I have mentioned are considered perennial, and so they are in a measure, but many of them will after a few years begin to go back in quality of flower and vigor of plant unless they are lifted, divided and given fresh and rich soil. There is no time that you can give your herbaceous plants a deep well manured piece of ground so well as when first planting.

CHRYSANTHEMUMS.

Those who think chrysanthemums pay at low prices can hardly have realized the great amount of time and labor that at this time must be spent on them; the work seems endless, but it will soon be over.

The later varieties will now get the last disbudding, and some varieties more than others send out a great many lateral shoots which must be kept pinched off if the best results are looked for. When growing strongly and forming buds the chrysanthemums will take plenty of water. When they begin to show color less is needed, and when well out will bear to be decidedly on the dry side.

Two weeks ago I mentioned that the rust had been cured or stopped on a bench of 'mums last year by the use of the liquid Bordeaux mixture. A month ago a bench of Golden Wedding was attacked by the rust and would, I feel sure, have ruined the lot if left alone. They have been syringed twice a week with the ammoniacal mixture, which has the essential quality of the Bordeaux, viz.: sulphate of copper, and the rust *is stopped*. It has not spread either on the individual plant or on the whole bench. Another year I would certainly use it as a preventive.

The black fly keeps at work right up to time of flowering, and as it is then impossible to use the extract you must give three good doses of tobacco smoke, which will lay the black fly dead at your feet, and I have never found the smoke to hurt either leaf or flower of the chrysanthemum.

AZALEAS.

When your azaleas arrive, which will be soon, don't forget to soak the ball in a tub of water for a minute or two. You never can get the dry ball thoroughly wet by watering. Don't be afraid to pare away some of the ball if too large, and pack the new soil firmly round the roots.

CARNATIONS FOR BEDDING.

If your trade calls for carnation plants for the borders in spring time, and it is very natural and proper that your customers should want them, don't sell them a worn-out plant that has been forced and flowering all winter, but go out to your carnation field now and lift up a few hundred of those that you left when you planted. Small stocky plants are better for this purpose than the larger. Pinch off all flowering shoots, pot firmly in 4½ or 5-inch pots and plunge in a cold frame. They will winter finely and will be entirely satisfactory to your customer and a good paying price is paid for them. $2.50 and $3 a dozen will pay handsomely, for they have taken up no valuable bench room, only a little watching during winter. W. SCOTT.

A Windmill.

Will W. S. kindly tell us what success he has with the "Aermoter" in winter. Also what he would consider a reasonable height for a tank. We have two acres of ground and about 16,000 feet of glass. Our water bill amounts to about $100 per year. S. N. Co.

I am very pleased to give any information I possess about the "Aermoter" windmill and its performance because it has proved such a boon to me. My mill is 60 feet high to center of wheel. The wheel is 8 feet in diameter. The height of the wheel is simply a matter of location; if tall buildings or trees are surrounding it you must be above them. The tower and wheel is made entirely of galvanized steel and needs no painting although a painting may not hurt it. The well from which this mill draws water is for 18 feet a dug well and till a very dry time came did me all right, but when a dry time came with increased want of water I ran short of water; then I drilled down another 32 feet and a 5-inch pipe followed the drill. At the depth mentioned we struck a supply of water that has never yet given out.

There is not the slightest trouble about winter. The upper valve of the pump is 5 feet below the surface of the ground and of course no frost touches it; from there the pipe leads off below the frost line into the greenhouse and then rises to the surface and continues along to the shed and up to the tank, which in my case holds 150 barrels. I cannot speak too highly of the Chicago Aermoter.

Such a mill as I have cost $60; the pump and putting up cost nearly $40 more, but it is a comfort and you will save lots of money if you buy one and cease paying that hundred dollars a year.

WM. SCOTT.

The Hamburg Exposition.

A few words about Wilhelmshohe, near Cassel, Emperor William's summer residence, before continuing about the Hamburg exhibition. Wilhelmshohe is a beautiful spot, created by some landscape architect of long ago, and nature has so assisted the original plan that it is worth a trip to enjoy. No tourist should miss it. It is one of the most lovely places in Germany. Besides the wonderful old pines, lindens, oaks, etc., the collection of deciduous and evergreen trees and shrubs is unlimited. The extensive mountain side is interspersed with rockeries, fountains, waterfalls, temples, retreats, imitation ruins, etc. The bedding near the castle is very artistic and beautiful. The conservatories are well known for the splendid rare plants they possess. Since 1866, when Kurhessen was added to Prussia, Cassel and Wilhelmshohe have improved wonderfully; new wide streets with substantial houses and fine gardens are being laid out around them. It is a health resort. While attending church services in the castle chapel the writer had a good opportunity to see the imperial couple and visitors attending divine service. The chapel holds only about 150 persons, and the privilege was accorded the writer to be present because it was the church of his younger days.

On the way to Hamburg I stopped long enough in Frankfurt o. M. to visit the horticultural exhibition there, which also is kept up all summer, but it is principally a rose display, and the roses were not at their best and the balance was rather neglected; however, some very nice things could be seen. One group of plants in a bed attracted the writer's attention. The group contained Solanums lacinatum, marginatum, cyananthum, robustum, atropurpureum, pyracanthemum, Warscewiczii and De Noteri; also Nicotiana colossea and Wigandia carascana. It was a very showy and striking large group.

A visit to the general market halls did not reveal anything of interest. There are many flower stalls where were blooming pot plants of poor quality, also wreaths, bouquets, and cut flowers, the quality of which was not inviting.

Arriving in Hamburg on August 26, I was ready for duty as judge for the special fall exhibit, which began the next day. The judges' tribunal consisted of twenty sections, five to each section; to each section was given an intelligent guide. Among the judges was Prof. Bailey, of Ithaca, N. Y. I was very glad to meet at least one from America, but this was all; why no more stayed over to see this beautiful show I cannot comprehend; many French, Danish, English and from all European countries, both florists and amateurs, were present. In the writer's section were a French baron from Paris, a Danish florist, a florist from Saxony, one from Brunswick and one American—International indeed.

The first day's work was light, on laurel trees and other specialties, but the next day's judging on floral work was long and tedious. There were so many competitors and only three prizes, with the privilege to give some special prizes, which we did, but of course several dissatisfied competitors have already filed their disapproval, which is the case in each section, and which was expected. To get these protests straightened out, answered, etc., is work for the section presidents and the exhibition committee. At 1 p. m. each day a breakfast was served to all, but what a lunch! a great lay-out with wine, cigars, etc. On the 28th a ride was given the awarding committees through the principal streets and on small steamers through the harbor, which was very interesting and enjoyable, again stopping for lunch on the way with the proper accompaniments. After a drive to the Botanical Gardens the gathering parted.

In the evening the banquet was held in the banquet hall of the main building. The lighting was perfect, the menu good and substantial, the wines excellent, music very good, but the table decorations very scant and poor. The acoustics of the hall were very bad; the speakers could be heard only twenty feet away. Speech after speech followed in German, French, English, Dutch, Danish, etc. Prof. Bailey was, however, not present to talk for our country. After the banquet the members scattered to view the main display below. At 11 p. m. the people were still surging through the main building and through the grounds. With the wonderful illumination of the bridges and buildings, it was a picture long to be remembered. Many friendships were formed, and I am sorry that our great country was so poorly represented.

I have gathered much information on many things and shall write more in my next letter. There are many beautiful things in the floral work and also much rubbish, but in plants everything is A1.

W. B.

New York.

BUSINESS DULL.—A FINE ROSE ESTABLISHMENT.—FLUSHING INDUSTRIES.—SUCCESS OF OLD ROSES AT J. H. TAYLOR'S.—A NEW BEGONIA.—FLATBUSH BOWLERS.—BOTANICAL GARDEN GETS ITS APPROPRIATION.—ANOTHER ORCHID SALE.—DEATH OF CLEMENCE WOCKER, JR.

The improvement noted last week did not last as well as it might, the coming of warm sunny weather again and consequent increase of cut having the usual effect on prices and buyers. Many expressed a wish that a Jewish New Years would come every Monday throughout the season as that occasion proved to be the best day the city flower trade has seen for many moons. Violets show the effects of the summery temperature and the double ones now coming it are pretty poor. Chrysanthemums are on the increase daily with prices downward tending. American Beauty is also coming in freely and with like results. MacDonald & McManus have have had a nice lot of cattleyas in their window on West 30th street each day the past week.

One of the most pretentious of the new establishments in the vicinity of New York is the fine range of rose houses recently completed by Hitchings & Co. for Mr. Thorne at Flushing. There are two houses of 150 feet each, two of 136 each and one of 317 feet in length. Two of Hitchings' new No. 57 heaters do the business for the whole range. Thomas Williams, formerly with S. C. Nash, is in charge. Meteor, Bride and Bridesmaid are grown exclusively, but a few plants of Beauty and Carnot set out as an experiment look so well that both these varieties are likely to be planted in quantity next year, by which time Mr. Thorne expects to have added another 300 foot house.

Flushing looks very pretty in its September dress, in fact it is one of the most attractive of New York's suburbs, and it is a good rose country as well. The John Henderson place, which in past years was so famous for its roses, is now handicapped in the race by its old style houses which can no longer compete with those of modern construction. There are, however, some fine houses of Brides, Bridesmaids, Cusins and Morgans that would be hard to beat for quality, and carnations and chrysanthemums, which are grown in limited quantity are equal to the best.

Over at Bayside, Mr. Taylor's new candidate, Dean Hole, which is a sport from Testout, is being given a chance to prove its value as a commercial rose for the first time and this winter's experience with it will decide its fate. But few blooms are seen on it yet. They are very pretty and seem to hold their form much better than does the parent variety and it is quite fragrant. Mr. Taylor has found his experiments in carrying old roses over from year to year so satisfactory that this season finds him with no young roses on the place excepting one house of Beauties. He has five hundred running feet of houses devoted to Beauty one house being in its third year. This house, at present, is fine and with its long, strong stems, seems to dispute the accuracy of Mr. Simpson's recently published views that good stems cannot be had from old Beauties whereat Mr. Taylor is duly jubilant. The famous house of old Brides now in its eighth year is still fresh and blooming and it looks as though the plants might outlive the house. Mr. Smith, the foreman, agrees with his employer as to the carried over stock and asserts that "the old fellows did the best."

Mr. F. H. P. Imbert, of Wood Ridge, has an interesting novelty in a lot of tuberous begonias of a new type, the petals having tufted excrescences projecting from them which give a peculiar appearance to the bloom. The strain originated with a French house and is controlled for this season by Vilmorin-Andrieux & Co., who are said to have refused to sell any for American use, but Mr. Imbert, who was in France last spring, found a way to procure them. Mr. Imbert is building a palm house which, added to his original house, will make a very fine conservatory. His collection of begonias and caladiums is quite extensive.

The Flatbush Bowling Club is steadily devoting each Thursday evening to practice, and refreshed by the cool fall weather the boys are beginning to pile up the big scores. Last week Alfred Zeller managed to snatch two "pots" from right under Riley's nose. The latter accepted the situation gracefully just as though he meant it. There is talk of appointing a sergeant at arms to hold within bounds the antics of those two youthful urchins Huidmuller and Schmutz. D. Y. Mellis has been very sick for some weeks and is just now convalescent. It will be some time before he will be able to join his associates at the bowling alleys.

The friends of the Botanical Garden have at last been granted that half million dollars, and are supremely happy. The hearing at the Mayor's office last week before the Board of Estimate and Apportionment brought out little opposition, and the views of the Board of Managers of the Botanical Garden were sustained.

Sander will again have a large consignment of orchids to be sold October 15 by Cleary & Co. A fine illustrated catalogue is now circulating and it shows a very tempting array of novelties and standard kinds.

Clemence Wocker, Jr., died on Monday,

Boston.

MEETING OF THE G. AND F. CLUB.—IMPROVEMENTS AT W. W. EDGAR'S.—ANNUAL DINNER OF THE CUT FLOWER GROWERS' ASSOCIATION.—LOCAL NOTES.

The first meeting for the season of the Gardeners' and Florists' Club was held on Tuesday evening, October 5. There were less than a score of members present. F. W. Fletcher read a paper on the Horticultural Press. He gave a brief history of horticultural journalism from the date of the establishment of the American Gardeners' Magazine and Register in Boston to the present day. He noted that interest in horticulture and the progress in horticultural literature had been contemporary, but the many periodicals that had started under the guidance of expert horticulturists only to find an early grave showed that ability in horticulture and able management in journalism are not always to be found together. The press has more than kept pace with horticultural progress excepting in the matter of profits and the man who has become rich in conducting a horticultural paper is yet to be found.

Lawrence Cotter, always invincible at statistics, took the floor after the essayist had finished and corrected him on some of his dates and other historical matter and asserted that there are plenty of men who have found the field of horticultural journalism a profitable one and gave a long list of such, beginning with Wm. Robinson of the London *Garden*, who began work at 7 shillings a week and is now a millionaire. Warren Ewell and W. J. Stewart also took part in the discussion.

Adjournment being then suggested Kenneth Finlayson objected and adroitly precipitated a discussion on the question of budded and own-root roses for forcing, and baked soil as a preventive of insects, in which James Wheeler, Lawrence Cotter, William Donald, Mr. Finlayson and others participated. Mr. Wheeler was the attorney for the budded rose system and told of astonishing results obtained from plants on Manetti as compared with those on own roots, both in quantity and quality of product. Mr. Donald said he had tried multiflora as a stock for grafting but found it unsatisfactory as to both foliage and bloom. Warren Ewell brought down great applause by announcing that he proposed to try grafting with his tulips in hopes of getting more bloom.

Mr. Edgar has two large houses of mignonette from one of which he is cutting large quantities of flowers equal to fine winter stock. This is the earliest on record here. Prices realized are low, however, as the garden supply is not yet killed off. Only one house partially filled with carnations now remains and the space once devoted to this specialty is now stocked with small ferns. Bergmann chrysanthemum is just in and is good but Yellow Queen is a failure, the buds having been stung and ruined by insects. Lager looks well; also Reiman, Maud Dean, Ivory and Bonnaffon. Mr. Edgar has erected large storage buildings for azaleas this season and this is undoubtedly the best equipped Easter plant establishment in this neighborhood now.

The Cut Flower Growers' Association held its annual dinner, election, etc., on Saturday evening, October 2, at Young's Hotel. There were about forty gentlemen present including the representatives of the three trade papers who were the invited guests. The occasion was a very happy one, the agreeable information in the treasurer's annual report of a dividend of ten dollars per share adding to the pleasant good nature which prevailed. A dinner without speeches would be only half a dinner and so a number of brief speeches were made. W. J. Stewart for the AMERICAN FLORIST and F. W. Fletcher for the *New England Florist* were first called upon and each congratulated the Association on its evident prosperity. Mr. Stewart spoke of the good results obtained from organization and instanced the present enjoyable occasion as an example of the benefits of organization supplemented by friendly personal intercourse. Mr. Fletcher alluded to the Association as a triumph of co-operation and questioned whether the idea might not be carried still farther in the purchase of supplies and mutual self-protection. His suggestion was the theme upon which most of the other speakers dwelt, the matter of mutual fire insurance taking especial prominence. W. H. Knapp, W. H. Elliott and others told of the difficulties met with in effecting insurance with regular companies, and with the exception of E. M. Pierce, who said he didn't believe in insurance, all seemed to favor the idea of a mutual organization. F. R. Mathieson spoke in approval of the scheme proposed by the S. A. F. committee. The annual election resulted as follows: President, W. C. Stickel; vice-president, E. N. Pierce; secretary and treasurer, Geo. Cartwright; directors, L. W. Mann, W. W. Edgar, John Walsh, Peter Fisher, E. Sutermeister and Wm. Nicholson.

James Galvin, who has been in the employ of N. F. McCarthy & Co. for a long time is about to start in business in the same line for his own account. Location not yet decided on.

Louis Stearns, assistant gardener at the Bussey Institution, has been promoted to be head gardener.

Col. T. L. Livermore has been appointed on the Metropolitan Park Commission by Governor Wolcott.

Philadelphia.

CLUB MEETING —LARGE ATTENDANCE — DOLLAR WHEAT AND FLOWERS —ELECTION OF OFFICERS —BUSINESS NOT SO BRISK.—STOCK IMPROVING.—MORE ROOM FOR MR. PENNOCK.—ANOTHER NEW STORE.—BUSINESS CHANGE.

The October meeting of the Florists' Club held last Tuesday evening was almost if not quite a record breaker in point of attendance, at least for an occasion when there was no out-of-town talent on the boards. There were over seventy members present and great interest was taken in the proceedings. Mr. Harris's paper was a brilliant and thoughtful document and was well read by Robert Craig. "Will dollar wheat help the florists the coming season?" was the title of the paper and Mr. Harris said that as far as dollar wheat made dollars more plentiful, so far would it benefit not only the florists but everybody, his theory being that an increase in the volume makes money cheaper, and thereby quickens its pace, as when money is scarce it is hoarded away but freely spent when plentiful. There was not much discussion as President Burton said the paper is now open for discussion, but no politics allowed. Mr. Burton's term of office expired with this meeting but he was parliamentary to the last and no one seemed to be skillful enough to handle the question without getting a silver tinge to their oratory that would have been immediately called down, so a resolution of thanks to Mr. Harris was soon passed and the paper given to the publication committee.

The election of officers for the ensuing year had considerable to do with the large attendance. There were a number of gentlemen nominated at the last meeting and nearly all took occasion before the voting commenced to decline, but few seeming to desire the honor and at the same time cares of the office. Wm. K. Harris received the majority of the votes cast and arrived at the club room from New York just in time to hear the announcement of the vote. The result was received with much enthusiasm and against the protest of the gentleman himself, who protested and finally accepted.

John Westcott was elected vice president, Thomas Cartledge, treasurer by ballot of the secretary, and Edwin Lonsdale, secretary. Speeches were made by the newly elected officers who all promised to perform their duties to the best of their ability, just like real politicians. The question for discussion next month is a timely topic, Mr. Carey being asked to write a paper on the best twelve varieties of chrysanthemums and state why he thinks so.

Business is a little quiet, the advance of the last week or two seeming to have spent itself for the time. Stock is plentiful although there is no piling up as yet. Stock of all kinds is improving; every few days there seems to be a change for the better. Some quite good Brides, Maids, and Meteors are now coming in while Beauties of all grades are better than a week ago.

Carnations are much improved and the now ready varieties are increasing, in fact they have been thought good enough to bring $1.25 per hundred, this price being asked for a few of the best. The early 'mums have arrived. Jacob Becker sent in a few Montmort and J. Heacock cut a few Bergmann, very fine of this kind. Next week will no doubt bring in quite a lot of the standard early kinds.

S. S. Pennock has been in his new building hardly long enough to know all the nooks and corners when he finds out that what he thought was a barn, is already too small for his increasing business. He has purchased the adjoining property and will soon tear it down and erect a building on lines similar to his present structure which when completed will increase his space about fifty per cent.

There is another cut flower establishment in town. Wm. Thompson, who has been for the last sixteen years with Robt. Crawford, has opened a store on Thirteenth street below Walnut. William is a hustler and we wish him success.

The retail business of the LaRoche & Stahl flower Co. limited, is to be conducted in the future by Mr. B. Stahl for his own account. Mr. Stahl has had charge of the retail department from the first and now that he has entered possession will no doubt meet with the success that his efforts deserve. The greenhouse department at Collingdale is to be run under the name of A. J. LaRoche. K.

Washington, D C.

TO JUDGE AT NASHVILLE.—VISITOR.—A NEW FLORISTS' CLUB LIKELY — BUSINESS CHANGES.—BUILDING —NEW ROSES —MR. SMITH TO JUDGE AT HAGERSTOWN.—GOVERNMENT COMPETITION.

Mr. J. H. Small, Jr., left the city recently night for Nashville, having been appointed one of the judges of the horticultural department at the Tennessee Exposition. The other judges are P. J. Berckmans, of Augusta, Ga., and Wm. Falconer, superintendent Schenley park, Pittsburg. Mr. Gardiner G. Hubbard of this city, is chairman of the jury of awards.

Mr. Robert Cameron of the Cambridge Botanic Garden spent several days recently in looking through the horticultural establishments of this city. It being his first visit to the Nation's Capital, he did not have time to take in all the sights, but spent all his time among the gardens. He promises us another visit in the near future.

The question of organizing a florists' club in the city is being talked of. The old organizations, known as the "National Gardeners' Club" and the "Florists' Club of Washington," have both gone the way of all the earth years ago. The former was organized during the year of the visit to this city of the Society of American Florists. The Washington Florists' Club was organized several years prior to that date.

John D. Davidson has removed from 1032 to 1002 Connecticut avenue, N. W. Smith & Putnum of 1710 Penn avenue, N. W., have retired from business. Their store has been leased by Davidson & Walker for a term of years.

Mr. J. L. Loose has opened a branch store at 1032 Connecticut avenue N. W., formerly occupied by John D. Davidson.

C. Strauss & Co. have added a palm house to their already extensive range of houses. The house is mainly for cool palms; it is filled at present with kentias in 6 and 8-inch pots. Pink and white chrysanthemums have been in flower with them for more than a week. The new rose Mrs. Garrett is looking very promising. The wood is quite spiny, this being the only objection the critics have to it thus far. Mme. Abel Chatenay, of which they have many thousands benched this season, is looking unusually fine. It promises to be an abundant cropper. The buds are small as yet, and no one can judge its future. Some think it will take the place of La France, which, by the way, is always in great demand here. I have seen no buds of the Chatenay which in my opinion equal the La France. We will have more to say about this rose when it is at its best, which will undoubtedly be before the season is over.

Violets made their appearance more than a week ago, but one would scarcely recognize them as the popular flower, they were so very small and almost without odor.

Mr. William R. Smith will go to Hagerstown, Md., to act as expert judge for the department of floriculture at the state fair, to be held October 12, 13, 14 and 15.

Colonel Bingham, who is in charge of the public buildings and grounds, was lately interviewed on the subject of free distribution of the surplus flowers grown for the "White House" decorations. He claims that the matter has been greatly exaggerated, and that they give more flowers to the hospitals and to the societies who collect flowers for the sick guilds than to private parties. Col. Bingham expressed to the reporter a wish to see some of the florists who object to his methods, claiming that he could soon convince them he was not a competitor in their business. He says he is willing to discontinue the custom of sending out flowers whenever he is ordered to do so by a superior officer. He claims he is not violating the law quoted by the florists. He said: "When cut flowers are sent out to senators and representatives in congress, they only send them in small quantities, not sufficient to decorate their residences. In fact we do not raise the kind of flowers that are most in demand for table or decorative purposes. We do not grow roses to any great extent, nor are our roses of such unusual beauty as to be in great demand. The members of congress do not get these cut flowers more than once a month and it appears to me that distributing them in this manner is much better than throwing them away where they will do nobody good."

Pittsburg.

BUSINESS OUTLOOK. — CLUB MEETING.— MR. BADER TELLS OF HIS EUROPEAN TRIP.—SMALL FIRE.—FINE FLOWERS.—VISITORS.

The trade situation remains practically the same as last week with a very encouraging outlook for the month of October. Several of the florists have orders for fine decorations, etc., already booked and as this month will see "society" resume the social entertainments, with general business conditions improved, the florists anticipate a much better and larger business than last winter.

The Florists' Club held its regular meeting on the evening of September 23, giving their president, Mr. John Bader, a very hearty greeting, he having just returned from a trip to Europe. Mr. Bader gave a very interesting though short account of where he went and what he saw. He went directly to Ghent, Belgium, after arriving in England, visiting more particularly the establishments of the large growers of azaleas, palms, dracænas, araucarias, tuberous begonias and half hardy stuff. He spoke very highly of their methods of cultivation and the excellent quality of the plants. Then he went to Holland to the bulb growers and is of the opinion that the excellence

of bulbs there outside of climate and soil is owing principally to the thoroughness of the care and attention given them, especially as regards watering; that with the same mode of treatment in this country we would be much more successful in that line of floriculture.

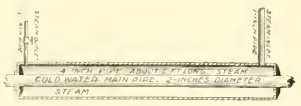
At Bruges, Belgium, he visited several establishments, including one consisting of about 70 houses covering a space of 10 acres; these are devoted to the growing of palms in large quantities. At this place is also located the largest grower of bay trees in the world; there are five avenues each 4,000 feet long, planted on both sides with bay trees, some of them 150 years old. Sander, of St. Albans, has a very large place here devoted mainly to palms. At Stuttgart Mr. Bader greatly enjoyed his visit to Wm. Pfitzer, who is acknowledged to be one of the best, and many think the best hybridizer and grower in Germany or Europe of cannas, gladioli and dahlias. In France he went to Nancy, visiting M. Lemoine, another great hybridizer. His begonias and gladioli were very fine. At M. Crozy's place he saw larger and finer flowered tuberous begonias than ever before and many good new varieties of Rex begonias, also geraniums, in set of eight different colors same style as the "New Life" geranium; these are all new ones. At Versailles he saw azaleas, billberglas, and some remarkable hydrangeas of the Otaksa monstrosa variety, over 6,000 of them, and will be in bloom from November to Christmas. The blooms are extra large. These plants are not rested but have been outside in pots all the time possible.

In the London district Mr. Bader visited Messrs. Ware's place, Kew Gardens and Covent Garden Market, where he was particularly well pleased with the great display of flowers and vegetables. He spoke in great praise of the establishment of Mr. Rochfort, who has 30 acres of glass in which he cultivates grapes, tomatoes, palms and ferns in quantities; regarding the grapes Mr. Bader was very enthusiastic. The talk was received with thanks and after it the club partook of a light lunch provided by the entertainment committee. Mr. Bader purchased many new plants while abroad and thinks some of them at least will suit the fancy of many growers and consumers.

About half past eleven that same night a fire broke out in the room where Messrs. Langhans & Co. store their extra materials, resulting in a loss of over $100. The firemen soon got it under control, or else Gustave and E. C. Ludwig would also have suffered as their storage rooms adjoin on both sides. No cause for the fire can be found, but that of spontaneous combustion.

Mr. Gus. Ludwig displayed some very good stock last week, consisting of American Beauty, La France, Bride, Bridesmaid roses and some extra fine tuberoses; they were grown at Oakwood Rose Gardens, Oil City, Pa., of which Mr. H. B. Beatty is secretary.

Mr. Martin Reukauf, representing Messrs. H. Bayersdorfer & Co., Philadelphia, and Mr. Evans, of Richmond, Ind., were visitors. Both report trade looking up.



Mr. F. Burki, Bellevue, is cutting 'mums quite heavily now. The very early white Mrs. Fitzwigram took the lead with Bergmann a good second in point of time. Glory of Pacific, pink and Merry Monarch, white, have proved very good varieties with him and sell very readily.

Mr. Robert Faulk, sales agent for Messrs. Hartman Bros., of Allegheny, reports business very fair. They have large quantities of fine chrysanthemums and are developing a large wholesale trade as well as keeping up the retail branch.

Mr. Nelson, representing F. R. Pierson Co., of Tarrytown, N. Y., was a visitor this week. REGIA.

Tempering Water.

Noticing several inquiries in the FLORIST about methods of tempering water, I send a sketch of my plan, which is simple, inexpensive and efficient.

A piece of ordinary 4-inch pipe about 6 feet long is put on the water main and both ends plugged up to form a steam jacket. Steam is admitted to one end through a 1-inch pipe and escapes at the other end through a ½-inch pipe. With two using water from this main the temperature runs 65° to 70°.

Montreal. JOS. BENNETT.

St. Louis.

IMPROVEMENT IN TRADE.—ROSES IN DEMAND.—OTHER FLOWERS.—DECORATION FOR VEILED PROPHETS' BALL.—THE CHRYSANTHEMUM SHOW.—TOTAL PRIZES OF $2,000.—SKETCH FOR NEW PARK.—BOWLING.

Trade this week has been fair and continually shows signs of improvement, but the weather is very warm and dry. Rain is needed very badly.

There is a good demand for all kinds of roses and especially long Beauties and Meteors. Kaiserin, Brides and Bridesmaid are among the good sellers. The "Veiled Prophets' Ball" sent the price up on all good stock. Beauties were first in demand, but there were not enough on hand to go around. Prices for firsts were $15 to $25, seconds $10 and $12. Meteors $3 to $5, Kaiserins $2 to $5, Brides and Maids $3 to $5 and Perles and Woottons $2 to $4.

Carnations from now on will be fine. Many growers are now sending in first-class flowers. Daybreaks, Scott and Flora Hill are good; prices from $1.50 to $2. Cosmos is now coming in better and sells for 50 and 75 cents per hundred. Some violets are being received but they are still small and pale, the weather being too dry for them, but they seem to sell any way. Some good valley came in this week and brought $4. Double and single tuberose stalks are selling well; double bring $6 and single $5 per 100 stalks. Smilax is selling well; good long strings brought last week $18, smaller ones $12.50 and $15. Maidenhair and asparagus also sold well.

The decorations at the Veiled Prophets' Ball were elaborate. The large fountain in the center of the hall was banked up with palms and foliage plants, the base of the fountain being banked up with flat layers made up of roses and carnations. Taken as a whole the effect was fine and it was much admired by all. This was the work of the Jordan Floral Co. The flowers used by the majority attending were Beauties and Meteors, mostly carried, although many were worn.

Walter Mott, representing H. A. Dreer, Philadelphia, spent a few days among the trade last week.

The thirty-seventh annual fair of the St. Louis Agricultural and Mechanical Association opened Monday, October 4. They are offering about $500 in premiums for plants and flowers; a great many of our florists have entered for the prizes.

"And still they come." The special prizes for the chrysanthemum show now amount to $1,500 including the Shaw prizes, the club offering all seconds and thirds, which will make the total prizes amount to over $2,000.

The committee reports that everything is running smoothly now since the question has been settled "Where are you going to give the show." The program will be in the hands of the printer on October 14, and all florists who are on the list for special prizes are requested to send in their list not later than October 12. The committee meets every Friday night at Beneke's store, 1220 Olive street. All correspondence should be sent to Emil Schray, secretary, 4101 Pennsylvania avenue.

Park Commissioner Ridgely submitted to the city hall commission several sketches for the new City Hall Park. The sketches submitted were much admired. In them he had mapped out the grass plats and flower beds placed and the shrubbery growing along the line of walks. The commission examined the sketches with admiration but did nothing outside of requesting the park commissioner to furnish estimates on the cost of construction.

The Bowling Club rolled on the new regulation alleys again Monday night but the scores were not so good as last Monday. E. Schray rolled high in three games, 491; Kuehn second, 469; and C. Beyer third, 459. The highest single game was rolled by Al. Bauer, 193; but this is very good rolling I think on regulation alleys. We will be found rolling at the same place next Monday at 8 p. m. All are invited to take a hand. J. J. B.

Cleveland.

BOWLING CLUB ORGANIZED.—ARRANGEMENT OF MEETING NIGHTS.—BUSINESS ABOUT AS USUAL.—NEW STORE.

The first meeting of the Bowling Club adjunct to the Florists' Club was held at Progress Hall on Detroit street, Monday evening, October 4. The club was organized and officered, S. N. Pentecost being elected president, A. H. Graham secretary, and H. A. Hart treasurer. William Stadie will officiate as captain of our team. Another will be appointed later. There was plenty of enthusiasm, an excellent list of members showing up for the first meeting, with a goodly number still coming. The quarters are excellent, comfortable and convenient in every way, and the alleys unsurpassed, so the bowling sharps say. It should be understood that the florists have possession every Monday night, that the bowlers will meet for their specialty on alternate Monday evenings, the florists using the rooms in connection for the transaction of business on the other Mondays and adjourning afterward if so disposed and members of the bowling club for a turn at bowling. This arrangement brings a florist's meeting on Monday evening, October 11. The following Monday goes to the bowlers and so on.

After the organization was effected everybody adjourned to the alleys where the balance of the evening was spent. H. Kunze and William Stadie speedily demonstrated that they were 'way up in the

game. A. H. Graham also showed that he was a reliable man who could be depended upon to make a poodle every time he came to bat. (That doesn't sound right but we can't be bothered by technicalities just now).

Business jogs along in the usual way, no great amount developing, but no flowers wasting. Chrysanthemums are appearing in small quantities with nearly everybody, mostly Bergmann, Marquis de Montmort and a few Glory of the Pacific.

Messrs. Smith & Fetters, both formerly with Gasser, at this writing are to open in a day or two. It is expected that their store on Euclid avenue will show up in great style.

C. Erhardt expects to move down on to Euclid avenue shortly.

The weather continues exceedingly dry and some of the florists who do not have city water facilities are having a hard time of it. A.

Chicago.

DECIDED IMPROVEMENT IN BUSINESS.—LARGE INCREASE OVER LAST YEAR—PRICES BETTER.—QUALITY IMPROVING—CHRYSANTHEMUMS.—VARIOUS ITEMS.

All the wholesalers report a decided improvement in business and talk very cheerfully. Some had a comfortable increase in their trade of last month over September a year ago. Kennicott Bros. Co. found on comparing the figures that their business for September this year was fully 25%, larger than in September, '96, and October has started in equally well. Others did not give figures, but all had noticed a marked improvement. The outlook seems very cheering, and indications are that the long promised and long deferred good times have at last arrived.

Prices of roses and carnations average much better for the same grade of stock, which is partly owing to better demand, but doubtless also somewhat due to a shorter supply. In spite of the most favorable weather the cut still remains rather light, more particularly in the rose line. Carnations were somewhat easier the latter part of the week, the cut increasing considerably and the quality improving. In fancies, in addition to those mentioned last week, we note a few very fine Mayor Pingree, also very fair Helen Keller and Flora Hill.

Chrysanthemums are coming in more freely. Mme. Bergmann appears in good shape, but some are rather short-stemmed. Next week we may expect some really good stock. Mrs. Robinson will be in among others, also Yellow Queen, Merry Monarch, etc.

Some extra fine Carnot roses with stiff stems nearly two feet long were seen at Bassett & Washburn's. The supply is not nearly adequate to fill the demand.

F. A. Chapman, formerly foreman for Poehlmann Bros., has taken a similar position with L. A. Noe, Madison, N. J.

As the result of the long drought there have been numerous prairie fires around the city. One of these fires threatened Vaughan's greenhouses at Western Spring last Wednesday, but no serious damage was done.

Visitors in town: Jos. Bock and son, of Burlington, Ia.

Indianapolis.

CLUB MEETING—STATE FAIR EXHIBITION.—BUSINESS CHANGES—THE PARKS—CHRYSANTHEMUM SHOW.

At the September meeting of the Indianapolis Florists' Club the executive committee of the State Society reported very discourteous treatment at the hands o state agricultural society regarding the premium list for the state fair. The state fair people after having apparently accepted the revised premium list suggested by the florists made radical changes, and still printed at the head of the list a line reading "This list is indorsed by the Society of Indiana Florists" when it was radically different from what they had indorsed. As a result the members decided not to exhibit and requested all florists to refrain from exhibiting. Two were found though that could not resist the temptation to step in and avail themselves of the opportunity to get easy premiums even though small.

Cornelli & Kelley have formed a partnership and have opened a store and conservatory in the north part of the city. The store is at 230 16th street and the greenhouses on N. Alabama street. All mail intended for Ed. Cornelli and Cornelli & Kelley should be addressed to 230 E. 16th street.

Garfield Park greenhouses are putting in two 80-horse power boilers. In the spring it is contemplated to add an electric plant and probably two more plant houses. About 50,000 bulbs are being planted this fall. The Main Park question is still before the supreme court awaiting settlement.

Insane Hospital authorities are putting up their substantial new conservatory, a very much needed improvement. The Deaf and Dumb Institution Improvement has simmered down to simple repairs of the old houses.

Silas Rothermel, Brightwood, sold out to Weishaar Bros. They will continue business there and give up their place south of the city.

Chrysanthemums are looking well in this neighborhood in spite of the extremely dry weather with no sign of rain in sight.

Chrysanthemum show committees are hard at work, and this year's show will be changed in many ways. The resources are much larger and the premium list much more varied. W. B.

Toronto.

DRY WEATHER CONTINUES.—TRADE SHOWS SOME IMPROVEMENT.—AMATEUR HORTICULTURIST DEFINED—MR HOUSTON LOSES VALUABLE PLANTS BY FIRE.

The fine dry weather still continues and with the exception of geraniums and a few other bedding plants outdoor flowers are about over. The geranium beds in the parks are flowering very profusely. Leaves are falling off the trees more from drought than from what little frost there has been. The cut flower trade shows some slight improvement generally and the season may be said to have fairly begun. Chrysanthemums will probably be in this week.

An amateur horticulturist as defined by the directors of the Horticultural Society is "one who does not depend or has not depended in any way for his living on any occupation connected with horticulture, and any person residing with or on the premises of one who so depends or has depended for his living on any occupation connected with horticulture is debarred from exhibiting." And there is a regulation in the society's prize list that "all exhibits must have been in the possession of the exhibitor at least two months."

Mr. Wm. Houston, of the Central Prison, is mourning for the loss of all his best palms and orchids and many other plants. A fire occurred there last Monday in one of the workshops close to the greenhouses, and the supply of water being short it quickly communicated to the potting shed and thence to the palm house, which contained some very fine specimens and which would shortly have been removed to the new conservatory at Parliament buildings. It will grieve everyone who knew this collection of plants to hear of its loss, and Mr. Houston will have the sincere sympathy of the whole trade around here. It is very hard to see the fruits of all one's care and attention for years go up in smoke in less time than it takes to write this paragraph. It is next thing to losing one's children. E.

Buffalo.

PROLONGED DROUGHT.—CHRYSANTHEMUMS ARE HERE.—NO APPLES TO BARREL.—VISIT TO DARIEN.—CARNATIONS AT CORFU.—FINE EARLY 'MUMS.

A dry wind is blowing and the leaves are falling and the grass is browning; very much so. This prolonged drought may not affect the florist much, but with the farmer and market gardener and "ornamental horticulturist" it is getting serious. Our parks and cemeteries and resident streets have a seedy look which is not very usual with us.

Chrysanthemums are here and are exceedingly welcome. We can't help how much the poor rose grower may lament the advent of the 'mum, they are just what we want now, for excepting roses other flowers are decidedly scarce. Mrs. Bergmann and Yellow Monarch are the two earliest locally grown. It is too early to say how they will sell, but the start in looks good. There are few if any $9 per dozen 'mums sold in Buffalo, but at $2 and $3 a dozen they will I believe go as well as ever and perhaps better than last year for there is a better feeling all round.

We have no apples to barrel this year and consequently have no $30 to pay for barrels, and won't have the pleasant sight of seeing 60 barrels of rotten apples carted out of the cellar next spring. We shall also miss the hard cider, but there are substitutes for that.

While among the orchards I found time to visit Messrs. Harman & Burr of Darien. They have two houses filled entirely with their very promising white seedling carnation "Genesee." There is certainly some excellent points about this variety; it is pure white, a fine grower and the best lifter of any variety I have yet seen handled; that can be accounted for by its abundance of long fine white roots. Harmon & Burr have found that sticking to a specialty pays best, so now their entire attention is devoted to violets and carnations.

Of the Corfu men T. A. Webb is the earliest with his carnations and is now picking a fine lot—Daybreak, Portia, Alaska, Scott and his own seedling scarlet. Mrs. Giddings has her five houses well filled with excellent clean stock, all carnations of the standard variety.

Mr. David Scott, of Fredonia, was in town this week with some grand samples of early chrysanthemums, Mrs. Bergmann being unusually fine. W. S.

Cincinnati.

COOLER WEATHER BRINGS IMPROVEMENT IN BUSINESS—PRICES ADVANCING—VIOLETS.—CHRYSANTHEMUMS—VISITOR.

We have been favored with cooler weather the past week, and a decided improvement could be noticed in business. Cut flowers have been more in demand, but plant trade has not shown any increase as yet. Funeral work is quite

FRIDAY, OCT. 15th. **FRIDAY, OCT. 15th.**

The plants are in grand condition, and are from the well known Importers and Growers

F. SANDER & CO., St. Albans, England and Bruges, Belgium.

The above will be sold at AUCTION by **CLEARY & CO., 60 Vesey Street, NEW YORK CITY,**

ON FRIDAY NEXT, OCTOBER 15th.

brisk and an occasional opening of some large business house is helping to accelerate trade. Critchell's Sons and Sunderbruch's Sons each have a contract for supplying flowers this week for the opening of Browning, King & Co. and The Fair. Julius Peterson has booked a swell wedding which calls for 800 long-stemmed American Beauties for the latter part of this week. In his show windows a plentiful supply of Princess of Wales violets can be seen. They are certainly the best in town.

Carnations have advanced from 75 cents to $1 per 100 this week. Violets are being asked for by the trade since Peterson has had a sign in his window "Fresh violets," but they are yet very irregular in supply. Chrysanthemums Marquis de Montmort, Bergmann and Lady Fitzwigram are with us and wholesale at from 10 to 15.

Mr. John Evans, of Richmond, Ind., was a caller this week. H. SCHWARZ.

ASSIGNMENT OF BRIGGS BROS. & CO.

On October 1 Briggs Bros. & Co., seedsmen and florists, assigned all their property over to Henry B. Hathaway and to Flour City National Bank. A chattel mortgage for $30,000 was filed in the county clerk's office on that day to secure the payment of promissory notes given by the firm to said bank and H. B. Hathaway. The liabilities are variously estimated at from $40,000 to $60,000; assets are uncertain. There is no real estate owned by the company and the property covered by the mortgage is specified as follows: All of the seeds, bulbs and plants in the east Main street store; all the seed cases and contents now in the warehouse of the firm on Church street or in storage at the various freight houses in the city; all machinery, cuts, dies, implements, fixtures and office furniture in the warehouse and store; all the greenhouses and growing plants or other property contained therein together with all the horses and wagons.

It is, however, the understanding as expressed in the mortgage, that in case the promissory notes are paid in full when due, the sale and assignment is without effect. It is said that other creditors have commenced suits against the firm; these creditors are mostly European houses, but as the two parties named above now hold all of the personal property, the other creditors will likely realize but very little on their claims, for the outstanding accounts have been assigned previously to the same parties.

The firm was composed of Chas. S. Briggs, Wm. S. Briggs and Ira W. Briggs; it is one of the oldest in the city. It has changed names five or six times in the last sixty years, but its personality has changed but very little. The firm claims that the government free seed distribution had a good deal to do with the failure.

K.

Government Seed Distribution.

WASHINGTON, D. C., Oct. 1.—The Agricultural department has been compelled to forego its decision to distribute this year's seed from Washington, because of a decision by Controller Tracewell of the Treasury that such distribution would be a violation of the law by which the appropriation was made. This decision was rendered today in response to a letter from Secretary Wilson.

In his reply Mr. Tracewell says that the appropriation for the last year was in the same language as that for the present fiscal year, excepting as to the amount appropriated, and he calls attention to the fact that Attorney General Harmon rendered a decision to the effect that the appropriation of last year authorized the Secretary of Agriculture to purchase seeds, already put up in packages and labeled for distribution. Mr. Tracewell holds in view of this decision that while the Secretary can determine the form in which the contractors shall deliver the seeds he cannot purchase the seeds and employ persons to put them up or contract with some one to do that work.

"It must not be forgotten," he adds, "that Congress has used the very plainest language in providing $130,000 for the purchase and distribution of seeds, bulbs, etc., and has attached to the appropriation the specific requirement that not less than $110,000 shall be used in the purchase of valuable seeds. Congress thus fixed a minimum amount, and did not intend that a discretion should be exercised by the Secretary of Agriculture. The whole act is mandatory in form, and the use of one-half of this sum in payment for personal service in distributing seeds would not be a compliance with the specific order of ot Congress."

"The head of a department," the Controller adds, "ordinarily has some discretion in the use of appropriation for his department. The appropriations for seeds seems to be drawn for the very purpose of preventing a construction which would admit of the exercise of any discretion.—*Chicago Tribune.*

MR. EUG. SCHAETTEL, representing Messrs. Vilmorin, Andrieux & Co., Paris, will arrive in New York per S. S. La Bretagne on October 10. His address will be care Mr. Aug. Rhotert, 26 Barclay street, New York, as usual.

HARTFORD, CONN.—Mr. D. S. Chamberlin has taken his two sons F. D. and A. S. into partnership, and the seed business will hereafter be conducted under the firm name of S. D. Chamberlin & Sons.

J. L. SCHILLER and C. B. Knickman have organized as the N. J. Seed Company with headquarters at Rutherford, N. J.

Omaha, Neb.

NEBRASKA FLORISTS ORGANIZE.—OFFICERS ELECTED. — TWENTY-THREE CHARTER MEMBERS.—PREPARING FOR THE CONVENTION OF '98.

Twenty-three of the florists of Omaha and neighboring cities met in the city hall September 30, and formed the Nebraska Florists' Society. W. R. Adams, superintendent of parks, as chairman called the meeting to order.

Officers were elected as follows: A. Donaghue, president; W. F. Wilcox, vice-president; Jacob Hess, treasurer; E. C. Erfling, secretary; trustees: L. C. Chapin, Benj. Hass, Geo. Swoboda.

Twenty-three were enrolled as charter members as follows: W. R. Adams, Jos. Chalmers, J. Y. Craig, R. H. Davy, A. Delaney, A. Donaghue, A. Donaghue, Jr., Chas. Edderer, E. C. Erfling, Paul Fioth, J. H. Hodgkinson, Lewis Henderson, Jacob Hess, Benj. Hass, Paul Paulson, Geo. Swoboda, Robt. Unger, of Omaha; W. F. Wilcox, Jos. McPherson, of Council Bluffs; L. C. Chapin, F. W. Taylor, of Lincoln; W. J. Hesser, of Plattsmouth; David Nicol, of Fremont.

This society has for its principal object the preparation for the reception of the Society of American Florists in '98, and the interests of the trade in the Trans-Miss. Exposition. All business relative to these subjects was laid over till the next meeting, October 14.

JNO. E. DE WALT, Box 82, Carlisle, P..

Kansas City, Mo.

THE CHRYSANTHEMUM SHOW—ENTHUSIASTIC AMATEURS.—QUEEN FLORA TO RECEIVE—A TOUR OF THE GROWERS' HOUSES—SOME CAPITAL PLANTS.

A very pleasant evening was spent on Saturday last, when after the business of the day was over several of the craft interested in floriculture met to partake of a supper, to which your scribe had the honor of an invite. The forthcoming chrysanthemum show was the chief topic of conversation, and it was refreshing to see such enthusiasm displayed by the amateur element, ably represented by Messrs. Schwartz and Roberts.

It was suggested as an additional drawing card to extend an invitation to one who is considered by a recent popular vote to be the most beautiful woman in Kansas. The idea is that this lady shall receive under a floral bower costumed as Queen Flora and present favors in the shape of pot plants to the children and flowers to the adult patrons. This will doubtless prove a happy conception; the young bucks especially will fairly tumble over each other in their desire to have a boutonniere pinned in the lapels of their coats.

The show will be given as usual in the armory and under the direction of Mr. Ripley, an enthusiastic amateur who has done much to make the success accomplished in the past. Upon adjournment it was decided to make a tour on the day following to the intending exhibitors and see what condition their stocks were in. This was accordingly done. The plants of Messrs. Brown & Son, Jas. Payne, A. Barbe and R. Jarrett do them credit. Probst Floral Co. (Sam'l Murray, manager) will beat their record of former years with a splendid lot of plants. Those grown for exhibition are in 12 and 14-inch pots, while for store sales a big lot of 5 and 6-inch stock is being carried. The principal kinds are Mrs. E. G. Hill, Mrs. H. Robinson, Miss Wanamaker, Ivory, Jerome Jones, Major Bonnaffon, Eugene Dailledouze, H. L. Sunderbruch. Lincoln will be ready at Thanksgiving. Mr. Murray is not anxious to get very early blooms. Roses are in good demand now.

Wm. Sharp, the able foreman, was administering the stimulator so necessary at this period in the life of autumn's queen, and is justly proud of the capital stock under his care. The general order and cleanliness of the place was strongly impressed upon us. I understand Mr. Sharp intends making a tour of Mexico shortly and will return with a collection of cacti if he survives the perils of the trip. He is studying up the language of the country in his spare moments.

Arthur Newell will be prominent in the cut flower and design section of the show.

V. M. C.

GREENFIELD, IND.—Mr. B. W. Cline, who has been doing a greenhouse business at 151 W. Main street, has entered into partnership with J. W. Myer, of The Myer Plant Nursery. The new firm will be known as the Greenfield Floral Co. and will do a general florist business, with a store at 53 West Main street.

Syracuse, N. Y.

FROSTS FINISH OUTSIDE FLOWERS.—TRADE KEEPS IMPROVING.— CHRYSANTHEMUMS LATE.—GOOD VIOLETS AND CARNATIONS.

We have had three successive frosts, which have finished up outdoor flowers for this season, and consequently flowers, especially white stuff for funeral work, are extremely scarce. Roses and carnations are beginning to come in in larger quantities, still the home supply is not anywhere equal to the demand, as trade still keeps on improving in a very satisfactory manner.

Chrysanthemums are a little later this year than usual; it seems it will be quite another week before Bergmann, Merry Monarch and Marion Henderson will be fit to cut. There are a few violets to be seen, and although they are not up to the standard of size and color at present they sell very quickly. Quite a number of weddings occurred the past week where plants and flowers were extensively used. The McCarthy-Murphy wedding was a very elaborate affair.

There is every reason to believe Henry Burt will be the Syracuse violet king this year. A house that he has had planted all summer with the sash removed are the best plants the writer has ever seen at any time of the year. His carnations also that he planted the beginning of August where the glass had been removed are looking exceedingly well and producing fine flowers. He points with especial pride to Mr. May's new variety Maud Dean, which has done splendidly with him and is certainly a grand thing.

ALPHA.

Warning.

From letters received from Waukegan and other towns near Chicago some fellow has been swindling florists by pretending to represent us (and probably other firms) and selling them a bill of plants, etc., for fall delivery, such as carnations, roses, etc., and then borrowing or obtaining money on account. In one or two cases he claimed to be a member of the firm. Please state in the FLORIST that we have no traveling agents nor have we visited these parties personally.

This is probably the same swindler mentioned in the FLORIST last spring. Florists should pay no money to strangers at least till the goods are in sight.

Dubuque, Ia. W. A. HARKETT.

DUBUQUE, IA.—Wm. Springborn, the florist, committed suicide October 4, by shooting himself in the head with a shot gun. He left no explanatory note and his relatives and friends know of no cause for the act except recent ill health. Mr. Springborn was 63 years of age and a bachelor. He was a native of Germany but had been a resident of this city for about 27 years and had many friends here. He owned the ground on which his greenhouses stand and was considered quite well off.

MILWAUKEE, WIS.—The preliminary premium list for the seventh annual flower show of the Milwaukee Florists' Club, to be held in November, has been issued, and copies may be had on application to the manager, Mr. A. Klokner, 930 Grand avenue.

BULLETIN No. 81 of the Ohio Agricultural Experiment Station, Wooster, O. is devoted to "The San Jose Scale in Ohio." The information given is very complete and the bulletin is freely illustrated. It can be had free on application by any resident of Ohio.

TRADE IMPROVING —CHRYSANTHEMUMS.—STOCK OF BETTER QUALITY.—A NEW ROSE.—VARIOUS ITEMS.

Trade is steadily improving. Chrysanthemums are now coming into the market in all their glory and considering the very warm weather the quality is excellent. Some very fine Ivory and Mrs. E. G. Hill can be seen, also a few Bonaffons. White and yellow chrysanthemums are bringing from 50 cents to $1 per dozen. Mrs. E. G. Hill brings 75 cents per dozen with rather limited supply. The demand for chrysanthemums is just as good as it ever was showing that their popularity is not at all on the wane. The Chinese growers as usual are sending in small lots of chrysanthemums of an inferior grade which in time find their way onto the street. There is satisfaction in knowing that they never bring in any selected flowers that can command high prices.

Roses are also improving rapidly in quantity with a very fair demand for good stock. Carnations are rather scarce particularly Scott and white varieties. Violets are becoming more plentiful and are of excellent quality. The fragrance at present is as good, if not better than at any other period of the year.

Matroia & Canepa have opened a flower store at 31 Geary street.

Mr. Sidney Clack has a new rose, a sport from the Bride, consisting of a beautiful blending of pink on a white ground, which he considers very valuable.

Mr. M. Lynch is having his new greenhouses heated by hot water and is also having the old houses painted and reglazed.

Mr. John Carbone, well known as a chrysanthemum grower, is beginning to send in some very good flowers which are commanding the highest prices. His chief sorts for cut flower work are Queen, Bonaffon, Dailledouze and a few others.

METEOR.

THE Herendeen Mfg. Co., Geneva, N. Y., has issued "A treatise on greenhouse heating in connection with the Furman boiler." It is neatly printed, freely illustrated and contains among other matter some very useful tables showing amount of radiating surface necessary to heat a given amount of glass exposure to various temperatures in zero weather. It can be had free on application.

SUSSEX, N. B.—The *Weekly Record* of September 10 publishes an interesting description of the establishment of Mr. H. E. Goold, from which we learn that Mr. Goold has made extensive additions and improvements this year, including a new three-quarter-span house, potting sheds, store houses and new boiler and piping. In six years Mr. Goold's place has grown from one small house to the present fine plant containing 10,000 feet of glass. Mr. Goold's stock is in fine shape and he has recently added to his record as a prize taker at the exhibitions.

POUGHKEEPSIE, N. Y.—An interesting paper was read by Mr. Wm. Russell at the meeting of the Dutchess County Horticultural Society on the afternoon of Oct. 6. The subject was: "My experience with greenhouse grapes grown outside."

Rose Notes.

This week I wish to address my remarks, which may be rather pointed, principally to the young men who are doing the actual work in our rose houses. It is important that they understand the very close relation that exists, by virtue of their position, between themselves, and poor, medium, or very fine roses. A clever grower may perhaps produce choice stock with the assistance of only inferior men, but he will succeed very much better, and with far less worry, if his employes are intelligent and thorough in all their work. I suppose a majority of the young men who by choice enter the rose growers' ranks, do so with the expectation that sooner or later they will rise to the position of foreman, or perhaps employer. Let me remind such that they have entered a school from which they will not graduate with honor except by an immense amount of study, without putting forth all the effort of which they are capable, and not without suffering many a heartache and disappointment. There is no royal road to success in rose growing, it comes only as a result of intelligent, methodical, and painstaking effort. The watchword of every successful grower is "Observe." He must watch, study, mark well the result of every experiment, ponder the relation between cause and effect; make sure that the impressions made are lasting; once interested to this extent work ceases to be a drudgery and becomes rather a fascinating pastime.

At this period where we are, as it were between seasons, we cannot give too much attention to the details of growing, the two most important of which are ventilating and watering. It is the custom on some medium large places to have one man do all the watering, another the ventilating, and still another the cutting of the flowers, but I do not consider this the ideal plan from any point of view; it has a tendency to reduce the men to mere machines; at certain hours of the day each man has more work than he can attend to properly, while at others he is idle; besides it divides responsibility and makes it difficult to fix the blame for any mistakes that may be made. If the flowers are not cut on time and go to waste the blame is shifted from the cutter to the man who manipulates the ventilators, and when a dose of mildew or black spot must be accounted for we are assured the house was chilled, and thus we continually have a conflict. Is it not much better for all to allow each or a certain number of men to take entire charge of as much glass as they are capable of managing properly (always, of course, subject to the supervision of foreman or employer); this plan is, I think calculated to develop the best there is in a man.

In regard to ventilating. A lazy man will not answer very well, he will want to save steps and make just as few rounds as possible; result, the plants will be too warm at 7:30 a. m., too cool at 8-30, too warm at 10, and too cool at 11, the same conditions prevailing in the afternoon, and he will wonder why they are all the time full of mildew. The natural and sensible thing is to begin to raise the sashes as soon as the temperature begins to rise in the house (say at 65° for all but Meteor) but not so high as to change the course of the mercury, when 70° is reached increase the amount of air, at 75° again increase, fixing 80° as the maximum. As the temperature falls the sashes should close in the same gradual way. I think the reason this work is not done thoroughly is on account of the labor it involves. A thermometer hanging in the sun is of no use, it should be incased in a neat wooden box and set in amongst the plants.

Watering. What do we understand by watering? Is it to simply take the hose at a certain hour every day and give the plants, something, for which I have no name: between a watering and a syringe? It is related of a florist of my acquaintance that in making his daily round with the hose he invariably came to a certain broad hard-leafed plant, the only one of its kind, at the same hour each day, and when his fellow workmen heard the water fall upon the leaves of this plant they knew just how far the day had progressed. Shall we water and syringe our roses in this automatic fashion? In order to have the watering done well the employer should furnish good hose and an adequate water pressure, after which whatever blame there is must attach to the workman. In the first place we need to discriminate between watering and syringing; because a house is well syringed it is not necessarily well watered, it may be desirable to syringe when it is obviously unwise to water, and vice versa; a make-believe syringe or a make-believe watering should not be tolerated, let us do it thoroughly or not at all. It is not necessary to water and syringe once every 24 hours, water only as the soil requires it, and at this season it should not be necessary to syringe oftener than four times a week.

Before starting out with the hose, which should be as early in the day as the temperature will permit (any point over 65° is always safe), we should go over all the benches, examine the soil and ascertain its exact state as regards moist-

ure, then as we come to the dry places we can water, passing over the remainder with a syringe only. It is seldom wise to syringe in the absence of sunshine. It doesn't speak well for a man's thoroughness and capability when the plants in the back rows, corners, and out of the way places are allowed to become breeding places for red spider. It doesn't make us feel any better to be told he hadn't discovered it; we can hardly help coming to the conclusion that the man either doesn't know how to syringe or else won't put himself to the necessary trouble. A bad dose of red spider makes trouble all round, it weakens the plant in the first place by robbing it of much of its foliage, and the extra syringing needed to remove the pest is almost certain to make the soil too wet and interfere with the root action. It is well to take the hose into the center paths and direct the water upon the plants from that point at least twice a week, and of course hose bibbs are needed there in addition to those in the other paths. Again let me say it is impossible to attach too much importance to the two items, watering and ventilating. ROB'T SIMPSON.

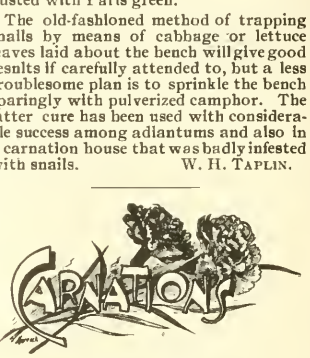
Grasshoppers on Roses.

I send a part of a rose stem with a disease that I have noticed for several years. It gives me practically no trouble, but I would like to know the name, cause and remedy. W. A. CHALFANT.
Missouri.

The stem was so completely dried up when I received it that it is difficult to tell what the trouble really is; I think, however, the brown places where the bark has been removed are the result of the bites of a grasshopper. I have often seen fine strong, fully matured bottom shoots cut almost through in half a dozen places. The only remedy is to catch them early in the morning when they are cold and sleepy. If W. A. C. is not satisfied with the conclusion arrived at I shall be pleased to have him send me a larger specimen wrapped in damp moss to keep it fresh, and I will report in the FLORIST later.
ROB'T SIMPSON.

Not Scale.

We enclose branch of Meteor rose planted in house five weeks ago. It is affected with some kind of scale or egg new to us, the only one we can find in the houses. Please tell us all you know about it. HAWKEYE.
Iowa.



This is not scale; it is a cluster of eggs deposited by a grasshopper. This insect quite frequently chooses the stem of a rose as a nest for its larvæ, and has a peculiar habit of gumming them fast to the bark, where they remain until hatched out in the sun. It is just as well to cut off the shoots and destroy them, but if they remain they can do no serious injury.
ROB'T SIMPSON.

Sow Bugs and Snails.

What is the best method of keeping sow bugs and snails from adiantums on the bench? M. A.

The most effectual method to get rid of sow bugs or wood lice is by means of traps formed from potatoes cut in half longitudinally and a portion of the contents scooped out. These may be laid about the bench with the concave side down, forming a most attractive harbor for the bugs, and should be examined at least twice a day, when the bugs can be shaken out into a convenient vessel containing a small quantity of kerosene. This trap is still more effective if lightly dusted with Paris green.

The old-fashioned method of trapping snails by means of cabbage or lettuce leaves laid about the bench will give good results if carefully attended to, but a less troublesome plan is to sprinkle the bench sparingly with pulverized camphor. The latter cure has been used with considerable success among adiantums and also in a carnation house that was badly infested with snails. W. H. TAPLIN.

Carnation Notes.

The principle of a support once clearly understood the construction of the same may vary as the fancy and ingenuity of the constructor may lead him, but there is one serious obstacle in the way, and that is the cost. It is easy enough to plan an ideal support but the cost of its construction may make it an impossibility for general use. Adaptability must be combined with cheapness, and easy and quick adjustment, if a support is to become popular.

Of the wire ring supports that have come to my notice Mr. Horan's has some good points. It is easily adjusted and stands firm, otherwise I do not see any improvements, and the price it is sold at does not quite harmonize with the length of the purse the average florist possesses. True the service of these wire supports is not for only one season; they can be used again and again, and I admit they are well adapted for varieties with a bushy, short body, where support is needed only for the flower stems, but that these varieties are not always the most desirable I have mentioned before; and even varieties with such a habit, under the forced culture under glass often grow to a size for which the support is wholly inadequate, not to speak of the varieties with a spreading habit that generally grow to larger dimensions. We do not want to select the varieties to fit our supports we have on hand, we want to grow the varieties that are wanted in the market and bring the best prices irrespective of habit, and fit our supports to their habit. So in my opinion the cheapest and best support is the one that can be used advantageously for all types.

Looking at the matter from this standpoint I have not yet found anything better than what we use and what is known as the Dorner system. It is far from me to assert that this method is perfect, but it has been so far very satisfactory to me, especially in point of being adaptable to all varieties, and the quickness with which it can be adjusted. In regard to cost, we are still using the wire netting we began with and the wire above the netting is now being used for the fourth year, and it is good for as many years more. All we have had to buy was the cheap cotton twine that we use in the construction of the support for the flower stems. As to the results of our method, I believe we grow as good flowers as any. Our method has often been described in this paper, and I hardly think it necessary to repeat it again. FRED. DORNER.

Housing Carnations.

In housing carnations in the fall, should they be lifted with a ball of earth or should the soil be checked off the plants when moved from field to house?
Texas. O. O.

This depends altogether on circumstances. If the soil is heavy and compact so it will not break it is advisable to plant with a ball, as the breaking of all the hard soil will break too many roots. If the soil is sandy and loose, with the most careful lifting the ball will be broken; the ground may adhere to some extent, but the roots are loose and have to establish themselves again as well as when bedded in fresh soil. So under such circumstances it is better to shake the worn out soil off and give the plants the benefit of the fresh, more nutritious soil. If plants were planted out from pots there would always remain a little ball, and this insures more fine roots near the plant. If one has to transplant many thousands of plants, and probably has to bring them a distance, it is always cumbersome work to plant with a ball. FRED. DORNER.

Decorated Bicycle.

The accompanying engraving is from a photograph of the first prize ladies' bicycle at the floral fete in Saratoga, N. Y., September 7. It was trimmed in purple and white by Mr. Wm. H. Stoneman, of Albany, and was ridden by Mrs. F. H. Smith, of Saratoga. The flowers were asters, ferns and smilax being also used. The placing of same is plainly shown in the engraving.

Orchids, Their Collecting and Culture.

BY JOHN E. LAGER.

[Read before the New York Gardeners' Society October 9.]

Orchids, taking the word in a broad sense, are found nearly all over the world, but the homes of the most beautiful ones are, as we know, the tropics, where specially the epiphytes flourish in all their beauty and where they are found, if not in great quantities, at least in luxuriance.

The number of these plants has been greatly diminished the last few years, great quantities have been torn from their native homes and sent to various countries, but what has done more in South America to reduce their numbers are the continually increasing plantations. Great zones of forests have been cut down lately and extensive coffee plantations have taken their places. The cattleya region has suffered the most, it being the right elevation and temperature for the coffee tree, but other orchids have felt the change as well, such as the most useful odontoglots, etc.

Guided by the success I had on my first trip a few years ago, I last year made for the same old place, there only to find, not orchids, but the forests gone and coffee trees planted by the thousands. Orchid collecting being my sole object, I was

THE FIRST PRIZE LADIES' BICYCLE AT THE SARATOGA FLORAL FETE, SEPT. 7.

greatly disappointed, but there was only one remedy, and that was to push further in to uncivilized parts far from habitations; and I must say I was fortunately rewarded by finding a most beautiful lot of cattleyas, that, to judge by their appearance, had up to that date escaped the greed of the orchid hunter.

The South American Andes, as compared to other parts of the world, are, without the least doubt, the richest in useful species, as long as we keep to the Andes proper, which are marvelous in the number of species they contain. Almost every foot ascended from the foothills, new features of the vegetation are presented, one locally varying greatly from another. This variation ceases immediately at the foothills, below which extensive valleys and river basins take the place of the rugged Cordilleras. The vegetation at these lower levels becomes at once more uniform, and plants found in the Magdalena and Cauca valleys of Colombia will, to the surprise of the traveler, appear repeatedly all through the Orinoco and Amazon valleys also. Some orchids are also very erratic as to their abodes; Miltonia vexillaria appears in the state of Antioquia, Colombia, and then travels along the central Cordillera, a plant here and there, until all of a sudden we find it re-established in Equador and Peru. Cattleya superba is another, appearing in spots in Colombia, Venezuela, and Brazil, and especially in the immense territories and low virgin forests embraced between the Orinoco, the Amazon, and Rio Negro systems.

Few people here imagine, when seeing beautiful orchids in flower, how much trouble, work and hardship have to be endured in securing them. Inconveniences of all descriptions are experienced at once upon setting foot on South American soil. Here begins a series of the slow tedious transportations peculiar to these countries, ascending rivers sometimes by steamers, then by canoes, and traversing great stretches of land on mule and horseback, involving a lot of time and much expense before the longed-for orchid region is reached. Yet there is always a certain charm attached to this mode of traveling. I enjoyed nothing more than to traverse one of the chains of the Cordilleras, starting out at 3 or 4 o'clock in early morning in the bright moonlight, in order to avoid the heat of the valleys. Before the summit is reached the journey is hard, tiresome and monotonous and on roads or trails used by the Indians before the Spaniards, and which the latter used for three centuries without improvements or alteration. Leaving the tropical heat below, little by little, the air gradually changes and becomes fresh and pure, and the rich aroma which the varied vegetation exhales is rapidly inhaled by the lungs in delicious draughts. At last the summit is reached; the road is less hard for man and beast, and finally a most beautiful and varied panorama is offered to our view of immense extensions of mountains rising one above the other, and in all possible shapes and angles, with deep declivities, narrow valleys and roaring rivers. This beautiful scenery recompenses the traveler for the monotonous and tiresome ascent and stimulates him on towards new expected triumphs in his explorations.

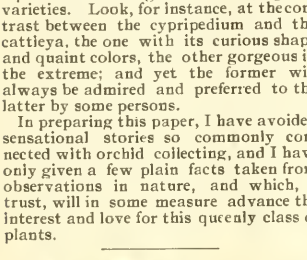
Many persons imagine orchid gathering is an easy task and they generally think that the plants grow on the trees by the ton, and, consequently, it is the easiest thing in the world to pull them off, put them in cases and ship them home. On paper and from a point of imagination, this is all very fine; but in reality such persons would find themselves greatly disappointed. To begin with, these plants never occur in quantities even where most plentiful; only a few to a tree; while the greater part of the trees have none at all on them.

Material for packing cases is another serious item to obtain, so serious indeed, that often it is worse than getting the plants. Dry goods boxes are often bought long distances from the field of operations, taken apart, done up in bundles and transported on muleback to the place of packing. Sometimes this is impracticable, when other measures have to be resorted to, such as making crates out of bamboo and stakes, etc. Frequently the plants have to be packed in bags, strapped on to the mules and taken across narrow trails between rocks, stones and trees, wading rivers, etc., often to find the plants ground to pieces when the packing place is reached.

Another monstrous enemy will at times cross the collector's path in the shape of low water in the rivers. In this latter case he is left helpless until a freshet rushes down from the mountains. At the beginning of this year I came very near losing 100 cases of plants, already packed and piled up in tents on the river bank.

For three long weeks I laid there impatiently waiting for a chance to move them. This, of course, is not the rule, but will happen when least expected. Difficulties of this nature and many more are principally what makes orchid collecting both slow and expensive. Those huge snake and tiger stories of which, no doubt, you have heard, I have found in actual experience to be greatly exaggerated in connection with orchid collecting. Some persons have asked me. "Why don't you go down there and collect choice varieties only?" Yes, I would probably do so were it only possible, but owing to the peculiar conditions of the country, it is utterly impracticable. Now and then a good thing is found, not always through the skill of the collector, but more through chance.

Supposing that cattleyas are collected during their flowering season, owing to so many inconveiences, only a limited number of flowers is seen after they are gathered. A great number is torn off from the plants in felling the trees, and if a few are left they are liable to go also after carrying the plants in a bag for a few days. Then, in refusing plants out of flower, the men would soon refuse to collect, and without them the collector would have to leave the field without plants, probably a wiser man for the next trip.



Studying these plants in their native homes, the true conditions under which they grow, in order to derive some practical knowledge as to their culture and

lessen the sensational absurdities and mysteries in which this beautiful class of plants have been enshrouded until not very long back, we are gradually discovering the mysteries in their treatment, which after all that has been said, written, and done, are only imaginary, and we can now note what a change has taken place the past few years in the cultivation of orchids. The water-can, with its sometimes tepid water, has given way to the hose; and the clumsy blinds have been replaced by some simple form of whitewash. The material for potting or fixing up is more sparingly used and less labor is spent on its preparation. Air is admitted in larger quantities, and the old system of closing up at a certain time has outlived its usefulness. In short, these plants are now treated on a more common-sense basis. These few things, simple as they may appear at first sight, have been strong levers in making orchids more popular in this country.

The cut flower business in the larger cities has done much to spread the popularity of these plants. In their seasons quantities of cut blooms may now be seen in the florists' windows and eventually find their way to the homes of the rich; and really what is more beautiful than a display of gorgeous cattleyas with their delicate shades of pink and white vying each other in beauty.

Orchids in general furnish a great deal of recreation to the amateur and to those who love and study them, and although some of these flowers are to all appearances far from beautiful, they still possess a something that will enable them to hold a place even among the most gorgeous varieties. Look, for instance, at the contrast between the cypripedium and the cattleya, the one with its curious shape and quaint colors, the other gorgeous in the extreme; and yet the former will always be admired and preferred to the latter by some persons.

In preparing this paper, I have avoided sensational stories so commonly connected with orchid collecting, and I have only given a few plain facts taken from observations in nature, and which, I trust, will in some measure advance the interest and love for this queenly class of plants.

Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 16. 23 and November 6, 13, 20, 27. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than Tuesday of the week the blooms are to be shown. Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

BOSTON.—A. H. Fewkes, Horticultural Hall.

NEW YORK.—Eugene Dailledouze, care of Dr. F. M. Hexamer, Madison Square Garden.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, corner 4th and Walnut streets.

CHICAGO.—W. N. Rudd, room 202, 185 Dearborn street.

SILVER CUP.

The Chrysanthemum Society's silver cup to be offered annually will be awarded to the best 6 varieties, 6 blooms each (36 blooms). The first cup will be competed for October 21. Competitors should forward their blooms, express prepaid, to Dr. F. M. Hexamer, Madison Square Garden, New York City. Open to all; no entry fee. Those desiring further particulars address ELMER D. SMITH, Sec'y, Adrian, Mich.

The silver cup offered this season by the Chrysanthemum Society of America, and to be competed for as above noted, is now on exhibition in the window of the Whitney Mfg. Co., silversmiths, corner of Broadway and 18th street, New York City, and will remain there till the day of the show.

Coming Exhibitions.

[*Secretaries are requested to supply any deficiencies in this list.*]

BOSTON, Nov. 2-5. Chrysanthemum show Massachusetts Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

INDIANAPOLIS, Nov. 2-6. Chrysanthemum show and floral festival State Florists' Association of Indiana. R. A. McKeand, Sec'y. Garfield Park, Indianapolis.

GERMANTOWN, PA., Nov. 3-4. Fruit and flower show Germantown Hort. Society.

POUGHKEEPSIE, N. Y., Nov. 3-5. Fall exhibition Dutchess County Hort. Society. W. G. Gomersall, Sec'y, Fishkill-on-Hudson, N. Y.

FT. WAYNE, IND, Nov. 3-5. Flower show Northern Indiana Hort. Society. J. L. Hanna, Sec'y, 402 Broadway.

NEW BEDFORD, MASS., Nov. 4-6. Chrysanthemum show New Bedford Gardeners' and Florists' Club. A. J. Fish, Sec'y, 279 Palmer St.

ANDOVER, MASS., Nov. 5-6. Chrysanthemum show Florists and Gardeners of Andover.

SYRACUSE, N. Y., Nov. 9-11. Chrysanthemum show Central New York Hort. Society. D. Campbell, Sec'y, Thornden, Syracuse, N. Y.

MONTREAL, Nov. 9-11. Chrysanthemum show Montreal Gardeners' and Florists' Club. Secretary, 12 Brandon avenue.

PHILADELPHIA, Nov. 9-13. Chrysanthemum show Pennsylvania Hort. Society. David Rust, Sec'y, Horticultural Hall, Sta. A.

CHICAGO, Nov. 9-13. Fall exhibition Horticultural Society of Chicago. W. N. Rudd, Ass't Sec'y, room 202, 185 Dearborn St.

MILWAUKEE, WIS., Nov. 9-13. Chrysanthemum show Milwaukee Florists' Club. A. Klokner, manager, 930 Grand Ave.

GRAND RAPIDS, MICH., Nov. 10-12. Chrysanthemum show Grand Rapids Florists' Club. N. B. Stowe, Sec'y, Grandville, Mich.

WACO, TEX., Nov. 10-12. Chrysanthemum show Waco Floral Society. Mrs. M. B. Davis, Sec'y.

SPRINGFIELD, MASS., Nov. 10-12. Chrysanthemum show Hampden County Hort. Society. W. F. Gale, Sec'y, 331 Main street.

TORONTO, Nov. 10-13. Chrysanthemum show Toronto Gardeners' and Florists' Association. E. H. Carter, Sec'y, Riverdale Park, Toronto.

LOUISVILLE, KY., Nov. 10-13. Chrysanthemum show Kentucky Society of Florists. F. C. Haupt, Sec'y, 241 W. Jefferson St.

ST. LOUIS, Nov. 10-14. Chrysanthemum show St. Louis Florists' Club. Emil Schray, Sec'y, 4101 Pennsylvania Ave.

PROVIDENCE, R. I., Nov. 11-13. Chrysanthemum show Rhode Island Hort. Society. C. W. Smith, Sec'y, 61 Westminster street.

NEW YORK, Nov. 12-13. Exhibition New York Gardeners' Society. J. H. Troy, manager, 365 Fifth avenue.

CLEVELAND, Nov. 16-19. Chrysanthemum show Cleveland Florists' Club. G. A. Tilton, Sec'y, 85 Woodland Ave.

The Parma Violet.

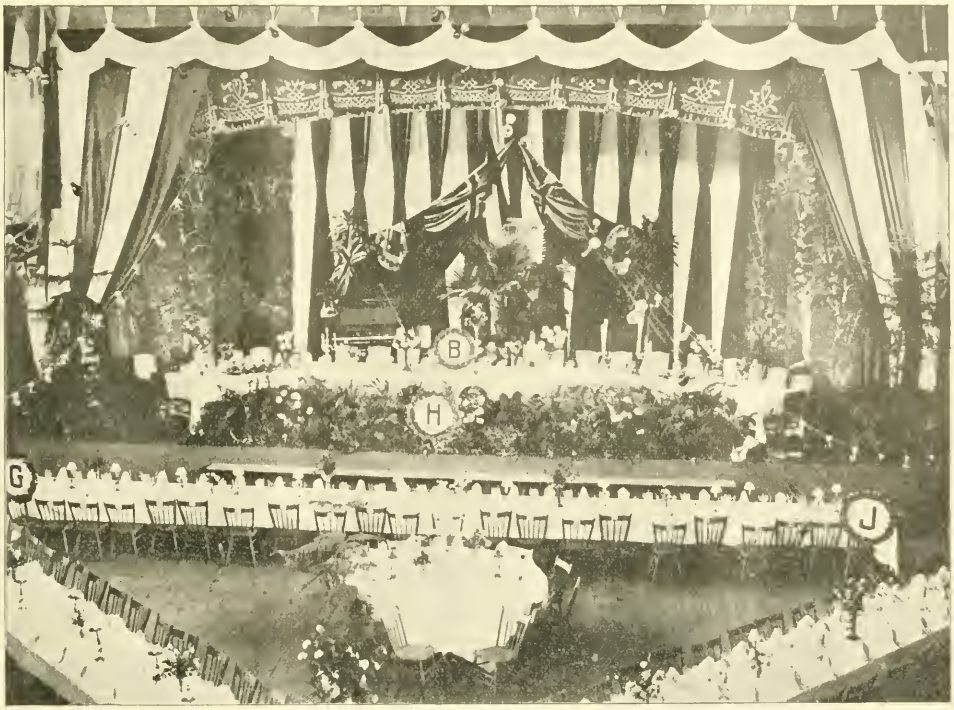
Replying to the inquiry about the "Palma" violet, would say there is no violet by that name. Parma is probably what is meant, as I have seen this violet frequently misnamed.

Violets are classified in two sections in Europe. The first section is called the Northern or Russian and the second is the Southern or Parma violet of the French and Germans, and the Neapolitan of the English speaking peopies. The botanical name is Viola Parmensis odorata. They are called Parma violets on account of their growing spontaneously in the duchy of Parma, Italy. It was the only variety we had been growing in this country under the name Neapolitan violet before the advent of Marie Louise. Swanley White, R. Garrett, Mme. Millet, Excelsior and numerous other varieties are sports from Parmensis, consequently they are all Parma or Neapolitan violets.

Baltimore. JOHN COOK.

Toronto.

A HANDSOME DECORATION.—KILLING WOOD LICE.—MR. DUNLOP'S ROSES.—MEETING OF HORT. SOCIETY.—BULBS.—CHRYSANTHEMUMS SELLING WELL.



The following is a description of the decorations at the Horticultural Pavilion on the occasion of the banquet given by the Board of Trade in honor of Sir Wilfred Laurier, Premier of the Dominion. The decorations were probably more elaborate than have ever been attempted here before and elicited the highest commendation from every one who saw them. Mr. Charles Tidy (assisted by his brother Mr. W. Tidy and Mr. George Manton) was the artist.

Never has the Pavilion appeared attired in such radiant raiment as that in which it shone last night. The entire roof was canopied with red, white and blue, a huge circular rosette occupying the center, with broad panels of red leading to the center of the walls just below the upper line of windows. Between the panels of white was gracefully draped, at each corner, a lozenge of blue stood out in striking contrast to the white ground. From the middle of the central ornament a rope of tinted blue fabric depended, and from its end lines of wires bearing colored electric lights were led to the four corners of the building. The galleries were so profusely decorated that scarcely an inch of the woodwork remained visible. Below the canopy the walls were adorned with tastefully disposed fabrics of blue and white, over which large English ensigns were draped to pillars supporting the roof, while at intervals pairs of large tricolors projected forth their folds, being gracefully drawn back to the base of the staves. At the south gallery the red ensigns took the place of tricolors. The front of the first gallery was entirely covered with dark material, of an Oriental design, over which flags were arranged after the same manner as those adorning the upper part of the walls. The pillars were covered alternately with red, white and blue; a most artistic effect being produced by a profusion of autumn foliage, beneath which the covering material was almost hidden.

The tables, which were arranged after the pattern adopted at the banquet to the British Association, were perfect bowers of blooms and ferns. Great masses of roses, yellow, crimson, and pink, set in handsome vases, were placed at intervals, and between them the snowy damask was half covered with smilax and asparagus, amid which glowed the rich colors of numerous roses and carnations. Shaded candles and handsome lamps threw a soft light on the tables, which, thus adorned, and loaded with rich plate and glass, presented a most artistic appearance. Above the tables were hung small, circular discs, bearing letters for the guidance of the guests, and wreathed with autumn leaves. Round the spaces between the outer walls and the supporting pillars were strung colored electric globes, which added greatly to the beauty of the scene.

But of all the many beautiful features of the decorations the most beautiful was the stage, on which was set the guest table. The upper part of the proscenium was of white, with strips of blue bunting running vertically, and caught together hour-glass fashion in the center, while below was a festoon of red. The curtains from each side were of heavy blue and white, arranged in graceful folds. The back of the stage was adorned with the same blue and white design as the proscenium, in the centre being the Dominion coat-of-arms, flanked by two British flags, while a huge palm stood immediately behind the centre of the table, and above it was a panel of red, white and blue, bearing, outlined in colored globes, the initials of the Premier. The floral decorations of the guest table were exquisite, and consisted of large pink chrysanthemums and roses, with smilax and asparagus.

The most beautiful effect of all was that produced by the great bank of flowers which reached from the front of the stage to the level of the guest table, and consisted of palms, ferns, and chrysanthemums, while through the dark foliage which formed the background to the rich color of the blooms gleamed many electric lights of various colors. In the center of the Maltese cross formed by the central tables stood a tall pedestal, bearing a mighty palm, which was half visible in a shower of asparagus fern.

DECORATIONS AT THE BANQUET OF THE TORONTO BOARD OF TRADE.

The photograph of the stage end of the Pavilion was taken before Mr. Tidy had finished his work owing to the waning light.

In walking through his houses with a lantern in his hand the other night, Mr. J. H. Dunlop spied a cluster of wood lice on the floor; looking down at them more closely he found that they were greedily devouring some sulphur that had been spilt there. Being a thoughtful man and able to put two and two together he put sulphur and Paris green together with the result that many wood lice formerly enjoying the best of health are now cold, clammy corpses. They are getting all the food of this kind they can possibly desire now.

Mr. Dunlop has quite a stock of his improved Sunset but it is not now in crop, the few blooms to be seen, however, show that it is worthier of the name of Sunset than the original. White Bougere is in full crop and is a sight to behold. Carnots are looking strong and thrifty, Whitney likewise.

Mr. Houston lost the AMERICAN FLORIST from the first number, Nicholson's Dictionary of Gardening and other valuable horticultural works by the fire last week.

The regular meeting of the horticultural Society last Tuesday was very well attended and during the reading of the paper given by Mr. Hermann Simmers on "Bulbs, their indoor and outdoor culture;" every one appeared to be taking notes. No better man than Mr. Simmers could have been asked to give a paper on this subject; he is thoroughly practical and told the audience just what they wanted to know. Next meeting "Chrysanthemums" and "Wintering plants and roots" will be the subjects.

Chrysanthemums are coming in in quantity now and of very good quality and at present are going off at pretty good prices. We shall hear of nothing else now I suppose until after the show.

E.

Boston.

RECEPTION AND BANQUET TO JACKSON DAWSON. — A NOTABLE GATHERING.—BUSINESS QUIET —BULB DEMAND ACTIVE. —VISIT TO FRED MATHISON —A NEW WHOLESALER.—GALVIN'S OPENING.

The reception to Jackson Dawson at Horticultural Hall, although most informal and participated in by his intimate associates only, brought together forty of the leading gardeners and florists of the neighborhood and was in every way a splendid success. Representatives of three states were among the number and letters of congratulation were received from a score more. The long dining table was prettily decorated with flowers and green and the surroundings were home-like and eminently fitting for the occasion.

The event of the evening was Mr. Dawson's narration of some of his experiences on his recent European trip. The extent of territory and variety of places visited in the few weeks at his disposal seemed almost incredible, and it was truthfully remarked that there are few men would see as much, fewer still who could remember it all or describe it in such an interesting and instructive manner. He recalled the fact that he was a boy of but five years when he came here and it had been the dream of his life to return and see what they were doing on the other side of the Atlantic.

England, he said, appeared to him like one vast park. He missed our great forests and craggy hills but he was charmed by the way beautiful evergreens and other things grew there which we cannot touch in this climate. He noted that with the exception of those from California and similar localities our American shrubs did not seem to thrive at Kew. His story of his visits to the great commercial places in London and its environs was deeply interesting. The Hamburg exhibition did not come up to his expectations but he admitted that his visit was at a most unfavorable season. The floral design work seen there was inferior from an American standpoint.

Nowhere in Europe did he find any greenhouses to compare with our modern commercial houses nor any roses or tree carnations such as American markets afford. The hardy carnations in England, however, were grand. The fine old-fashioned gardens of Edinboro pleased him especially and at Perth the magnificent old specimen trees were a sight to behold. The surroundings of Cork and the Dublin parks were also among his pleasantest recollections and the absence of "Keep off the grass" signs was favorably commented upon.

Mr. Dawson talked for more than an hour and in addition to his horticultural reminiscences he related much that was entertaining regarding the Blarney Stone, the Queen's Jubilee and many historical

spots, not forgetting the Irish Sea which gave him his first and only touch of seasickness. He spoke in highest praise and appreciation of the great kindness which he received everywhere.

Many interesting remarks followed from the gentlemen present, the speakers being severally introduced by W. J. Stewart. John Galvin spoke most eloquently of the pleasure Mr. Dawson's talk had given him and in response to unanimous demand sang as he only can sing it, his great song, "Maloney don't know that McCarthy is dead." Judge Hoitt followed with a splendid address, speaking of the superiority of our own Arnold Arboretum and deplored the fact that it is not appreciated by the public as it should be. F. L. Harris' reminiscences of the Isle of Guernsey, Warren Ewell's graphic portrayal of how he would have managed the Irish Sea trouble, Carl Blomberg's words of hearty welcome, and Kenneth Finlayson's reference to Jackson Dawson as the Robert Burns of horticulture, were among the bright gems of the evening. M. H. Norton said he felt proud that Boston had such a worthy representative to send to Europe. Robert Farquhar, Lawrence Cotter and P. Welch all endorsed from personal observation, much of what Mr. Dawson had told of transatlantic horticultural progress. Messrs. Wm. Appleton and Jas. P. Dillon brought congratulations from Providence, Messrs. Pettigrew, Nicholson, Sander, Rose, Donald, E. M. Wood, J. A. Galvin and others added pleasant testimony and H. P. Kelsey, formerly of North Carolina, told how all through the south, Jackson Dawson is well known.

The cut flower trade is rather weak at present with supply somewhat in excess of the demand. Roses are much improved in quality. Chrysanthemums are rapidly increasing in number and improving in quality with prices lower. Few violets are seen in this market yet, those that are received being of fair quality for the season.

Dealers report a big sale for Von Sion narcissus. Roman hyacinths in special sizes are short and Dutch hyacinths are good property.

The garden committee of the Mass. Horticultural Society with a large number of other florists visited F. R. Mathison on Tuesday and were royally entertained by that gentleman.

Jas. A. Galvin will open a wholesale flower and supply store at 31 Hawley street.

Thos. F. Galvin expects to open his new Back Bay establishment on October 20.

New York.

CUT FLOWER TRADE LACKS ACTIVITY.—MEETING OF FLORISTS' CLUB.—PLANS FOR MEDAL AWARDS.—FIRE INSURANCE COMMITTEE TO MEET ON MONDAY, 18TH INST.—DEATH OF W. C. WILSON.—MEETING OF GARDENERS' SOCIETY.—PAPER BY MR LAGER.—PLANS FOR EXHIBITION AT NEW HOTEL ASTORIA.—DEATH OF DAUGHTER OF GEO. SYKES.—INSTITUTE FAIR.

The current week has been very discouraging to the cut flower dealers, so far. Summery weather has brought in an increased cut of roses and carnations, and chrysanthemums are already so abundant as to become unwieldy. Buyers have now begun to get critical, demand perfect flowers and refusing all that do not quite meet their exacting requirements, the price in the mean time tending rapidly downward. Good blooms do not bring on an average more than from one dollar to one and a half per dozen. While not to be compared to the heavy exhibition blooms offered later in the season these are really fine flowers, heavily foliaged and thick stemmed and with a good assortment of colors. American Beauty roses are much more plentiful than at any previous time this season, quality fair. Of the newer roses such as Morgan, Testout, Siebrecht and Carnot but few are seen, the great bulk of the rose stock consisting of Bride, Bridesmaid and Meteor. Carnations have declined nearly fifty per cent in price. Violets run poor, as a rule, one dollar per hundred being outside price for the few nice ones that are received, the ordinary grades bringing only half this figure. Cosmos is now abundant and sells well at 25 to 50 cents per hundred.

The meeting of the New York Florists' Club on Monday evening was not attended by a large number of members but it was one of the liveliest sessions of the year, the question of the disposition of that gold medal furnishing material for much vigorous discussion, and the various motions and parliamentary tangles giving President Henshaw about all he could manage. The final result of two hours' hot argument was the endorsement of the plan proposed in Mr. Manda's motion that the medal be given to "the exhibitor making the most points at one year's consecutive meetings of the club," and a vote instructing the exhibition committee to prepare and present at the next meeting a scale of points to be used in judging exhibits in the medal competition. D. Appleton & Co. requested that the club send them a photograph of its exhibit in the floricultural department of the World's Fair for use in illustrating a volume now being prepared on that subject and an affirmative vote was given. Mr. Esler announced that a meeting of the Fire Insurance Committee of the S. A. F. would be held in New York on Monday, October 18, and that if the trade wants to accomplish anything in this direction all proposed applications for insurance should be in the committee's hands by that date. A vote was passed appropriating a silver medal to be competed for at the November meeting of the club, twenty-five blooms of chrysanthemums in not less than five varieties being the object specified.

The veteran florist and plantsman, Wm. C. Wilson, died at Astoria, Long Island, on Saturday, October 9, after a painful sickness of several weeks. Mr. Wilson has been employed for some time past in the greenhouses of Herman Dreyer but failing health, the infirmities of age and the strain of misfortune prevented much activity. His end was peculiarly sad, for he died in poverty and most of the friends of his prosperous years had either died or forsaken him. A quarter of a century ago Wm. C. Wilson was known all over the country as one of the most promlnent growers of the day. His immense establishment at Astoria and his retail flower store on 14th street, New York City gave employment to many hands, and from those ranks have come many of the active florists of the present day. A kinder hearted man than Mr. Wilson is seldom found. His great weakness was his implicit, child like trust in his fellow man, and to this characteristic more than anything else was due the business reverses and consequent train of misfortunes which darkened and saddened the last few years of the poor old man's life. His funeral took place on Tuesday afternoon.

The New York Gardeners' Society held a meeting on Saturday evening, October 9, at which a large audience listened to an interesting lecture on orchid collecting by John E. Lager. Preliminary schedules for the coming exhibition were distributed. The show will be held in the hall of the new palatial hotel "The Astoria," on November 12–13, and the list of patronesses includes the names of fifty of New York's most noted society ladies. John Shore is chairman of the exhibition committee, J. I. Donlan, secretary and J. H. Troy, 365 Fifth avenue, is manager.

Miss Edith, daughter of George Sykes, died at Jersey City on October 6, after an illness of but twenty-four hours duration and just as an operation was going to be performed for peritonitis. The funeral services took place on Friday at 8 p. m.

The Institute Fair at Madison Square Garden is still in progress. There are groups of good plants from F. R. Pierson Co., J. M. Keller and J. E. Brown. A dish of Parker Earle strawberries from G. N. French is very tempting. A number of exhibitors make showy displays of garden flowers.

Edward Mitchell has been appointed park commissioner to fill out the unexpired term of the late W. A. Stiles, that is, till January 1, 1898.

Mrs. Ball has bought out the business of Miss Rose Harris at 1146 Broadway.

Visitors in town: J. F. Colwell of Buffalo Botanic Garden, A. M. Murdock, Pittsburg, Pa.; Samuel Goldring, Albany, N. Y.

Cleveland.

RAIN AT LAST.—CHRYSANTHEMUMS RELIEVE SHORTAGE.—NEW STORE OF SMITH & FETTERS.—CLUB MEETING.—DOWLERS ROLL NEXT MONDAY.

The long spell of dry weather has at last been broken by a very good rain. Many florists through lack of this have so far either only housed part of their carnations or have postponed the entire matter till now. Planting, however, will now be finished entirely except in a few cases where a crop of chrysanthemums must first be cleared away.

The latter are now coming in in fair quantities and greatly help in easing the demand for other flowers, which have heretofore been rather short in supply and not in any variety.

Smith & Fetters, formerly with J. M. Gasser, opened their new store on Euclid avenue last Thursday, October 7, with great eclat and the front door key. Many remembrances and congratulations were received by the new firm, not alone from the local fraternity, but from many out of town sources.

The store is beautiful in both finish and color, the latter being confined to white and gold, the ceiling being finished in a beautiful shade of green. The counters are marble topped and arranged about the walls. A pretty feature is an alcove tastily furnished and decorated for the convenience of patrons. The rear portion of the store room, separated from the front by a large and elaborate cooler, and used for working purposes, is so situated that goods can be received from the rear without intruding upon the sales space. The firm reports a very satisfactory business so far.

Chas. Erhardt, who had intended to move down in Euclid avenue, has determined to stay for the present at least in the quarters he has occupied for several years.

The first regular meeting of the club was held in the new location in Progress

Hall Monday evening, October 11. There was a good attendance and considerable business was transacted. A committee was appointed to make arrangements for the music for the chrysanthemum show in November. Next Monday evening, October 18, is bowlers' night. A.

Chicago.

CLUB MEETING.—PROGRAM FOR THE SEASON.—ELECTION NEXT MEETING.—FIRE INSURANCE.—NEW CHRYSANTHEMUM.—CARNATION ARGYLE.—CHRYSANTHEMUM SHOW.—HEAT HAS DEPRESSING EFFECT ON MARKET AND STOCK.—VISITORS.

At the meeting of the Florists' Club last Thursday evening a vigorous program for the winter season was inaugurated and much business disposed of. A committee consisting of Messrs. Edgar Sanders, C. W. Johnson and Joseph Reeve was appointed to prepare a program of essays and subjects for discussion for each of the meetings this winter. This will be acted upon at the next meeting and the program published, enabling each member to look ahead and arrange to certainly attend meetings at which subjects of special interest to him are to be touched upon. The president was instructed to appoint at his leisure a committee of five to act with the American Carnation Society in preparing for the reception of the society at the time of its convention to be held in this city next February.

The work of the S. A. F. fire insurance committee was discussed, but the owners of glass present did not seem to be very enthusiastic over mutual fire insurance. When the success of the Hail Association was cited it brought out from one speaker the remark that a hail storm could not be manufactured to order. Of course the inference was plain. There seemed so little faith in mutual fire insurance, though all agreed that the rates made by the regular companies were too high, that the discussion finally resulted in the appointment of a committee to visit the underwriters of this city and see if some benefit could not be secured by pooling the business of the members. It was thought that if a line of business amounting to a considerable sum was offered providing proper concessions were made, the agents would consider the matter of sufficient importance to take action. The time seemed a peculiarly favorable one to open the subject, as a rate war has been inaugurated and is apt to spread.

Amendments to the by-laws providing that in future the membership fee of $2 shall also pay the dues for the first six months, and that members who have been dropped for non-payment of dues be readmitted on the same terms as new members, were read, and action on same will be taken at the next meeting, at which will also be held the annual election of officers. Another attraction for next meeting will be a paper on the growing of chrysanthemums, by Mr. G. Stollery.

There were displayed at the meeting a half dozen magnificent blooms of Mr. W. N. Rudd's new light bronze chrysanthemum Mrs. Arthur Caton, a seedling grown by his foreman, Mr. C. W. Johnson. The color is very attractive, the incurved flowers of very large size for so early in the season, and stem and foliage were superb, the latter coming up very close to the flower. Stollery Bros. displayed a vase of their fine new pink carnation Argyle, a cross between McGowan and Tidal Wave. It is an excellent variety from every point of view and is sure to be popular when disseminated. The fragrance is peculiarly spicy and this is not the least of its attractions.

At the adjourned session two games were rolled. The old hands were found to be badly out of practice, while a dark horse, in the person of Mr. Hills, made the banner score of the evening, 205.

The judges for the chrysanthemum show have been selected, and are as follows: A. H. Fewkes, Newton Highlands, Mass.; E. A. Kimball, Chicago; Prof. L. R. Taft, Agricultural College, Mich. Mr. W. N. Rudd will be superintendent of the exhibition as in past years. Until a few days ago there was some doubt as to his being able to give it time this year, but the matter is now happily settled and the show will have the benefit of Mr. Rudd's ability and experience. Indications are excellent for an exhibition that will be an advance on any previous one. Arrangements are nearly perfected with a leading art club to give an exhibition in connection with the chrysanthemum show. Flowers, art and music is unquestionably a happy combination.

Bassett & Washburn are cutting some fine blooms from a house of their early white chrysanthemum Kate Washburn. Both flower, stem and foliage are very good.

The sudden change in temperature, from regulation fall weather to August heat, has had a somewhat depressing effect on the market. This is more especially true in regard to roses, considerable of the cut being nearly open. Kaiserin and Meteor requiring a higher temperature, did not suffer so much as Brides and Maids. Good teas are still held, however, at from $2 to $4. Chrysanthemums are selling at from one-half to two-thirds the price of former years. Instead of selling at from $3 to $4 a dozen, they only bring $1.50 to $2 for the largest, with medium flowers going at $1 and smaller flowers 75 cents.

Carnations are not of such good quality as last week, with demand about the same, prices 75 cents to $1 with a few fancies bringing $1.50.

Among recent visitors were Mr. Geo. Souster and wife of Elgin, Ill.

Philadelphia.

BETTER DEMAND ALL ROUND.—PRICES NOT MUCH CHANGED.—'MUMS FAIRLY ABUNDANT.—WHEN GREEK MEETS COLOR.—FLOOD OF COSMOS.

There is an appreciable increase in the volume of business and a much better demand for stock of all kinds. Good Beauties are selling very well and at advancing prices. The quality of all kinds of flowers is steadily improving, roses particularly being much better than a week ago. Prices are not much changed, but for extra stock a dollar or two more per hundred is asked. Two fifty to three dollars is now asked for the select Beauties per dozen. Choice teas bring $5 to $6 per 100; the majority of the stock, however, goes for $4. Carnations are much more plentiful and have improved in price; $1.25 is now asked for good flowers, a few specials bringing $1.50. White seem to be the most plentiful and sell at from 75 cents to $1.

The 'mums are now fairly abundant. Montmort is about done, being crowded out by better kinds. Glory of the Pacific is to be seen in good shape. Merry Monarch and Bergmann can be had in several grades, and Whilldin and Marion Henderson make a good golden contrast. Good flowers seem to be selling in the stores rather freely, and it looks as if the usual quantity will be needed to fill the demand this fall. Wholesale prices are from $1 to $2.50 per dozen, according to quality. A few potted chrysanthemums are about, mostly Bergmann and Glory of the Pacific.

There is a new fakir in town; a gentleman of the Greek persuasion has set up a case on Thirteenth street adjoining Chestnut, and has his best smile burnished up for business. It is not now when "Greek meets Greek," but when Greek meets color, for that is what this gentleman will have to contend with, nearly all of our sidewalk merchants being of African extraction, and not a few hustlers as well.

Cosmos has fairly flooded the market; it is to be seen everywhere and is of the finest quality, the season being very favorable for its blooming. Some of the growers are receiving a lot of Japanese longiflorums, which have arrived in fine condition and appear to be fine bulbs.

W. K. Harris is putting up small baskets of potting soil, nicely labeled, for sale in the stores. It is in convenient form and sells in limited quantities.

Hardy ivies are scarce, nobody seeming to have much of a stock on hand. Good plants generally sell well at this season, and some good grower should make a specialty of this plant. K.

Cincinnati.

SUNSHINE INCREASES SUPPLY.—MARKET TRADE DULL.—FIRST MONTHLY EXHIBITION.—CERTIFICATES AWARDED.—CLUB MEETING.

Bright sunshine the past week had a marked effect on the flower supply, and especially so on roses. Had it not been for several large fall openings, there would surely have been a glut in the market. The Sixth Street Flower Market was exceptionally dull last Saturday; there was absolutely nothing selling.

The first fall and monthly show was held October 9 at the club room. The display was not so large as the average but was satisfactory to begin with. The most conspicuous plant was a Nephrolepsis Bostoniensis from the City Greenhouses; the plant measured fully four feet in diameter and the fronds were five to six feet long; also two specimen plants of dendrobium and cattleya from the same greenhouses were very much admired. Three blooms of Yellow Queen chrysanthemum exhibited by the Hoffmeister Floral Co. were exceedingly fine for so early in the season. Mr. Gustave Adrian showed a white seedling carnation. Every one seemed to predict for it a grand future; it is a cross between Daybreak and Albertini, has that strong growth of Albertini and the free blooming habit of Daybreak; more will be heard from it this winter.

The judges awarded the following certificates: C. C. Murphy, Harrison's White carnation; George & Allen, lily of the valley; Sunderbruch's Sons, Daybreak, Morgan and Perle roses; Gustave Adrian seedling carnation; Theo. Bock, of Hamilton, Glory of the Pacific and Elvena chrysanthemums; Hoffmeister Floral Co.; Yellow Queen chrysanthemum, Am. Beauty, Brides, Bridesmaids and Meteor roses, and carnations Flora Hill, Scott and Alaska; City Greenhouses, Nephrolepsis Bostoniensis, Adiantums cuneatum and Farleyense, Dendrobium formosum, Cattleya labiata, Cannas Paul Marquant, Florence Vaughan and Queen Charlotte; John Freis, Ficus elastica; Chas. Pfeiffer, Cycas revoluta.

In the evening the regular monthly meeting was held and called to order by President Gillett. The meeting was poorly

attended, only eight members being present. It is to be hoped that our November meeting will be a record breaker, and Mr. Giesy, to whom was granted an extension of time to see the boys, will work hard to bring them together. Mr. Alb. Sunderbruch was elected a member.

H. SCHWARZ.

St. Louis.

TRADE STILL IMPROVING —PLENTY OF STOCK.—PRICES.—THE ANNUAL FAIR.—NEW ESTABLISHMENT.—DEATH OF MRS EGGELING.—TREE TO PLANT IN CITY HALL PARK.—MR JUENGEL BUILDS AN OFFICE.—BOWLING.

Trade in the cut flower line improves each week and there is plenty of stock to go around. A pleasant smile from everybody at the commission houses is an indication that business is good.

Chrysanthemums are coming in better each day. Mme. Bergmann, Kate Brown and Gloriosum were the first to come and found ready sale. Local growers are complaining that their stock is a little backward owing to the very warm and dry weather. Roses are in fair demand. Long Beauties have the call, price 15 to 25 cents each; shorts 5 and 8 cents. Meteors, Kaiserin, Brides and Carnots come next in demand, firsts bringing 5 and 6 cents, seconds 2 and 3. Bridesmaid, Perle and Wootton are plentiful and do not sell well. Bridesmaid is especially abundant; there seems to be an overproduction of this rose.

Carnations are plentiful now and some of them are very fine. The price has dropped to $1 per 100 for the very best. Rose Queen, Flora Hill, Scott and Daybreak are the best; the reds that come in are very small and poor. Violets are better; the small single sell well at 25 cents per 100. Some Californias are in, but very few, and bring 40 cents; the very dry weather has kept them back somewhat, but by next week we will have plenty again.

Cosmos is selling well this week and is also coming in better and with longer stems; price the same, 50 cents per 100. Valley is scarce and there is quite a good demand for it at $4 per 100. Smilax was plentiful a week ago, but now it seems scarce, and there is quite a demand for it, selling as high as 18 cents per string.

At the thirty-seventh annual fair held last week by the St. Louis Agricultural and Mechanical Association, C. Young & Sons Co. captured all the firsts on plants, Ellison & Tesson all the firsts on cut roses and table designs, C. Young & Sons Co. second. For the best funeral design C. Young & Sons Co. were first and Ellison & Tesson second. Mr. Max Herzog, of Gratiot Station, acted as judge. The fair was the most successful held in years.

The Maplewood Floral establishment at the junction of old and new Manchester roads have built two new houses, 72x20 and 50x20. Mr. W. Strezing and Wm. Bouche are the proprietors of this new place. Mr. Bouche had charge of the Missouri exhibit at the World's Fair.

Mrs. Matilda D. Eggeling, wife of the late E. G. Eggeling, the well-known Superintendent of Public Parks, died at her home, 1653 South Grand avenue. Mrs. Eggeling was in the cut flower business at the above number. The business will be continued by her son.

The park commission is puzz'ed as to the kind of tree to be used in the new City Hall Park. Mayor Ziegenheim favors soft maples but the objection is made to this that every storm breaks these trees and injures their symmetry. The elm has a furry leaf and catches the dust, therefore it is not available. Oak can not grow where there are paths and granitoid, as all its roots lie close to the surface, and so the park department is puzzled and wants suggestions from outside.

Chas. A. Juengel, of 1833 Linn street, has built an addition to his greenhouses in the shape of a handsome office. Charlie reports that he is now in good shape for a good season's trade.

The bowlers took advantage of the cool night and a full attendance was on hand. The boys rolled some great games. The three highest games were rolled by John W. Kunz, 579; C. Beyer second, 563; and Bencke third, 528. The high single score was by C. Beyer, 248; Kunz second, 216; and Weber and Helwig a tie for third place with 192 each. The last game we had five men on each side. Kunz's side rolled 876 and Beneke's side rolled 873. This is good rolling on regulation alleys. I am glad to note that Cleveland has fallen into line with a bowling club with regular weekly rolls, also Flatbush keeps it up; boys, the others will follow.

Pittsburg.

BUSINESS IMPROVEMENT CONTINUES. — CHRYSANTHEMUM PRICES LOW. — CLUB MEETING.—TALK OF FLOWER SHOW —A HANDSOME DECORATION.—A SILVER WEDDING.

Business continues to show a little improvement from week to week. Several of the florists are fortunate enough to be able to report a busy week, mainly decorations and funeral work, with good orders for decorations this month already booked. The Horse Show which closed on Monday gave quite an impetus to trade as not only were the private boxes handsomely decorated, it being an essentially fashionable event, but the many social functions growing out of it, demanding the use of flowers and plants kept the florists tolerably busy.

Chrysanthemums are coming into market in good quantities now, but prices are very low for so early, 75 cents and up per dozen, wholesale, was the figure in the early part of the week. Dahlias are also on the market and find ready sale at fair prices. Cosmos, outdoor grown, is being offered of good quality and is a good seller. Messrs. Randolph & McClements are cutting very good chrysanthemums this week and report business brisk. They had several very extra decorations for the week with good orders ahead for the month.

Messrs. Elliott & Ulam also find trade very good. They are getting in from their greenhouses chrysanthemums that are A1 in quality as well as other stock. They report good orders for the month already booked and everything indicates a good fall business.

The Florists' Club have a meeting booked for the evening of the 14th, when the subject of holding a flower show will be discussed; judging from several expression of opinions, there will not be any held here. The park conservatories give too good ones all the time to hope for patronage enough to justify the florists in going to the expense and labor incident to getting up a flower show, is the consensus of opinions I have listened to.

Mr. Gus. Ludwig reports business improving. One of his recent dinner decorations was very handsome. The large dining room, finished in white was very beautifully decorated with autumn leaves ceiling and walls, the columns with asparagus and smilax, the table with flowers. The room is immense and the effect was grand.

Mr. C. Blind, a florist on Perrysville Road, will celebrate his silver wedding on the evening of the 14th; quite a large delegation of his brother florists will be in attendance and wish him many happy returns.

REGIA.

Worcester, Mass.

BUSINESS CONTINUES TO IMPROVE —FLOWERS PLENTIFUL —QUALITY IMPROVING — 'MUMS IN QUANTITY —GOOD WEDDING ORDERS.

Business continues to improve slowly, and with the advent of cold weather will probably settle down to something like the regular thing. Flowers are plentiful and improving in quality every day. Carnations are good, exceptionally so for this season of the year; though no disbudded blooms are coming in yet, we are getting good Daybreak, Scott, Alaska and Rose Queen, and a few fine Victors.

Chrysanthemums we have now in quantity. Mrs. Bergmann and Glory of the Pacific are very fine and were ready to cut October 5. A great improvement in the quality of roses is noticed and we will probably have an adequate supply, now that 'mums are in.

We are getting quite a lot of wedding trade, which seems to indicate that the people in general are anticipating better times. The first large wedding of the season, the Morgan-Sawyer wedding, brought out an elaborate decoration by Lange. Pink and white 'mums were used in quantity (Mrs. Bergmann and Glory of the Pacific being the varieties), and palms and Asparagus plumosus festooning were used lavishly; floral arches over the aisles were one of the prettiest features.

No violets are coming in to amount to anything. The weather has been too warm as yet to bloom violets. We have had but one black frost up to the present time, and the thermometer has stood at 60° all day (October 11) and it looks as if we were going to get a much needed rain.

A. H. L.

Washington, D C.

Mr. J. R. Freeman, representing the florists, called on Col. Bingham, Superintendent Public Buildings and Grounds, recently, stating their side of the controversy mentioned in the FLORIST a few weeks ago. Col. Bingham is reported to have listened attentively to all Mr. Freeman had to say and agreed with him on several propositions, but stated that he could not do otherwise than follow the custom of his predecessor. They are reported as having had a very pleasant conversation and Col. Bingham said that he had no feeling whatever in the matter, and was perfectly willing to discontinue the practice should he be ordered to do so by a superior officer.

At the next meeting of the florists measures will be decided upon to further the efforts to prevent Col. Bingham from giving away any cut flowers to senators or representatives in congress and other public men. The florists claim that although it is a custom that has long been followed, it is illegal and interferes with their business.

REYNOLDS.

DALTON, MASS.—J. R. Shields, formerly of Boston, is now in charge of Mrs. J. B. Crane's place. A fine range of conservatories is being erected here.

Florists' Fire Insurance.

The outlook for Florists' Mutual Insurance is much more encouraging this week than last. About $400,000 of business in all has been promised the committee, and if reports continue to come in as they have in the past few days, the association will be organized within six weeks. The cities are becoming interested and the matter is to be presented at the various Florists' Clubs, many prominent florists are pledging their hearty support.

Because the old-fashioned tumble down greenhouse was dangerous, the fire insurance companies had just cause to charge high rates, but upon well built greenhouses of modern construction the present rates are far too high. Florists are paying from two to five times as much insurance upon their greenhouses as on their dwellings and stables, while the risk upon the former, if constructed upon modern principles is little if any greater than on the latter. Relief is now in sight for the florists if they want it.

There is good reason to believe that a mutual association, conservatively managed and accepting no hazardous risks, can give perfect protection at one half existing rates.

Fire Insurance.

EDITOR AMERICAN FLORIST: With your permission I would like to answer the following pertinent question in your columns: "Why is it that fire insurance requires the guarantee of so much more business than did the Hail Association upon its organization?"

The Hail Association was fortunate enough to secure an amendment to the general insurance laws of New Jersey, which amendment did not require them to have any specific amount on deposit when commencing business.

With fire insurance there is no state where organization can be effected without at least $20,000 spot cash, consequently if florists want a fire insurance association of their own they have got to put down the "soap." JOHN G. ESLER.

Water Lily Blooms.

Mr. Tricker's answer to our query does not help us much. Last summer one of our prominent citizens died in Washington and among the floral designs was one containing water lilies. The lilies were apparently as fresh as when first put into the design and remained wide open while the roses and other flowers were very much wilted. Won't the Washington florists tell us how the water lily blooms were kept open? J.

HUNTINGDON, PA.—Howard L. Mitten was married at Hamilton, O., to Miss Nora M. Morton on October 6.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

The Government Seed Order.

The government circular asking for bids on about 13 million packets of seeds has been the item of absorbing interest to the seed trade this week and a great amount of figuring has been done. The short time for preparing bids, about 8 days, has made quick work necessary and occasioned lively wiring and wire pulling. Fires have broken out in some congested localities but it is hardly believed that the same were occasioned by the overheated wires on the seed business.

The list contains this time rather more rare field seeds than before though still much too large a percentage of common varieties to benefit the seed trade by free distribution of the same. The flower seed list comprises about five per cent. of the order.

Rochester, N. Y.

Since writing last, another judgment for $2,373.63 was filed in the county clerk's office against Briggs Bros. & Co. In favor of R. J. Goodman Sons, New York custom agents. The New York firm held two notes against the seedsmen, one for $1,127.25 and the second for $1,101.48, both dated November 17, 1896 and due September 1, 1897. K.

THE NEW JERSEY SEED CO. has been succeeded by J. L. Schiller. The new firm is composed of J. L. Schiller and C. B. Knickman and has located at 404 E 34th street, New York City.

Rochester, N. Y.

TRADE CONTINUES ENCOURAGING —GOOD ROSES AND CARNATIONS SCARCE —EARLY CHRYSANTHEMUM. — PLANT TRADE INCREASING.

Trade continues to be rather encouraging. The better class of flowers are not overplenty, carnations especially continue scarce and first-class roses the same; there is plenty of second quality of the latter in the market but they move slowly. Chrysanthemums are coming now. Schlegel & Sons are the first in the city with their Florence Teall; it is a good sized white flower on stiff stem, resembling Bergmann but is earlier; they have been first with this variety for the last three years and they grow it well. Violets are still small; we had a few very warm days during the past week which seriously interfered with their size. Asters are getting scarce, excepting inferior stock.

The bulk of September trade this year compares very favorably with that of last year for the same month; so say several of our storemen.

Sharp frosts have damaged most of the outdoor stuff to such an extent that but little of it is of much value for the florist, though some second or third quality asters, dahlias, tuberoses, etc., are in the market yet. Gladiolus, anemones, montbretias, sweet peas and a lot of hardy stuff is still in good condition. Prices for the better class of flowers have not advanced materially, notwithstanding the increasing demand, but an upward tendency is noticeable on all well grown indoor stuff. Chrysanthemums are coming in more freely every day, Florence Teall, Mme. F. Bergmann, Merry Monarch, Marquis de Montmort are getting quite plenty; the yellows are scarce. No fancy prices are realized, but a few have been sold at from $2 to $3 per dozen. The quality of roses has improved lately and there is now a fair supply of them in the market. Carnations are not so scarce as they were a week ago, but violets are still small and rather rare. Smilax and adiantums are to be seen in quantity on very short notice, while but very little asparagus is in view this fall.

In the plant line, some well flowered cyclamens are offered and a few potted chrysanthemums can be seen in the store windows. The demand for ferns and palms is fairly good only; large plants do not sell readily this fall, it is the cheaper or smaller grades which go off first. Fern dishes are as much in vogue as ever and as a variety of small ferns are grown here in large quantities by several firms, no difficulty is experienced in satisfying the most fastidious customer. K.

CHAMPAIGN, ILL.—The Illinois University is building one new palm house 25x60 and 18 feet high, and one 50x20, in addition to the four houses now in use; cost of above to be $5,000; contract let to Lord & Burnham Co. R. Utenweiler is in charge of greenhouses and grounds.

AN UNUSUALLY favorable opportunity to secure an established business at a moderate price is offered enterprising men of small capital through the advertisement of Mr. C. S. Loder, 271 Broadway, New York, which appeared last week. Failing health of the owner is the only reason for selling. It will pay to investigate this.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—As fern grower or propagator. Address FARLEYENSE, care Am. Florist.

NOTABLE HORICULTURAL FLOATS — NO CHANGE IN BUSINESS CONDITIONS.

The parade of the semi-centennial, or golden jubilee, as it was termed, of this city, which occurred October 12, was a very large and fine affair. The Central New York Horticultural Society's float was one of the best in line, being prettily decorated with evergreens, smilax, asparagus and flowers. In the front was an enormous golden cornucopia containing fine peaches and other choice round fruits, while the sides were banked with fine examples of other fruits, such as grapes, etc. In the center was a pyramid of exotic plants, at each end being a beautiful young lady appropriately dressed for the occasion, representing Pomona and Flora. The rear was filled with chrysanthemums, roses and baskets of flowers. A bench was presided over by John Huller, who it must be said acquitted himself in a very able manner as a workman, potting plants, propagating and so forth. A large placard announcing the coming chrysanthemum show was conspicuously displayed and was no doubt a good advertising medium, being viewed by many thousand people.

L. E. Marquisee had two floats in line, a large floral harp standing six feet high in one of them attracting much attention, the outline of which was splendidly kept. As the floats moved along geranium cuttings were potted and given away, and it is needless to say H. Bellamy had to keep up a Peter Henderson gait to supply the demand.

The condition of the flower market remains unchanged from last week.

ALPHA.

Cumminsville, O.

With characteristic push has Fred. S. Walz risen from the floods and frosts which did their best to extinguish him late in the spring; in this he acknowledges the efforts of some local craftsmen to assist in placing him again upon terra firma. To see the capital stock of chrysanthemums, though planted late, is very encouraging. He is as usual testing some promising seedlings; one is a white cross between Niveus and Queen, of medium height, stocky growth, foliage good; a yellow seedling on the order of Viviand Morel, an early bloomer, coming into second crop for Christmas and continuous until Easter, a capital variety to keep over; a yellow Mrs. H. Robinson, growth identical in every way with parent. Bertha Flight is a late creamy white but little known but well worth growing.

V. M. C.

GEO. HANCOCK & SON, Grand Haven, Mich

When you write an advertiser please state that you saw the adv. in the FLORIST.

Saginaw, Mich.

Evidently the florists of this beautiful and enterprising city are fully determined to keep pace with the advent of better times, for improvements of various kinds and the building of additional houses seem to be the order of the day. A house covering 100x20, especially adapted for American Beauties, is a recent addition to Mr. Chas. Frueh's already extensive plant. The construction of all his houses, their general adaptability and manner of equipment mark them as models of their kind. Another recent improvement worthy of mention is the equipment of each of his 19 houses with modern ventilating apparatus.

Grohman Bros., the enterprising young florists, have spruced up things in fine shape. In addition to overhauling their entire plant, they have added a violet house covering 100x8, and have replaced their old boiler by one of a more modern design and of greater capacity. Grohman Bros. propose to do some hustling during the coming season, or to put it in their own words, "to make hay while the sun shines."

Wm. Roethke & Son were by no means slow in equipping their plant with many modern improvements. Their two new boilers, each of 125 horse-power, recently put in position, attracted my special attention and a few lines of description may be of interest. The boilers are of the high pressure sort, with flues and shells of the highest grade of steel and possessing all the desirable features of an ideal water tube boiler. Each has three series of banks of flues, three water shells and a steam drum. The flues are straight and somewhat staggered. The immense weight of the boilers necessitated supporting them on iron columns, independent of the brick foundation. This was also done with a view of allowing full opportunity for expansion and contraction. Its construction is such as to give perfect circulation and to ensure efficient steam generation. Every tube has a separate outlet, and owing to the arrangement of the tubes and baffle plates, there is a large draught area, which insures complete combustion of gases and to some extent economy in fuel. Another feature worthy of mention is the fact of the boilers being practically self-cleaning, all impurities being deposited where they can be easily blown off with surface blower. There are numerous doors in the masonry and a man hole in each shell, so that, if necessary, all parts of the boiler can become easily accessible.

Taken all in all, Messrs. Roethke & Son's plant, covering about 50,000 feet, underwent many extensive as well as expensive improvements.

A visit to Mr. J. B. Goetz's place is one of those treats which your correspondent never misses. As usual, I found Mr. Goetz quite busy and in the best of humor. Things, though still somewhat slow, are moving along nevertheless, while the outlook is decidedly encouraging. As a grower of roses and carnations, Mr. Goetz is pre-eminently successful, his young stock looking fine, healthy and well grown. Nor are his violets to be found fault with, the young plants showing up in fine shape and free from spots and disease.

Mr. Goetz is experimenting on a house of cyclamens and dracænas and from present indications both will command a ready market. HOMO.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

LUCAS PAINT
THE BEST FOR
PRESERVING & BEAUTIFYING
NO WATER NO BENZINE
BUT PURE OIL AND
PERMANENT PIGMENT

Northampton, Mass.

The season may be said to have fairly opened and all are looking forward to a good winter. There has been a fair demand for roses and carnations during the last week with supply ample.

Carnations are looking very well considering the wet summer and give promise of good crops to come. 'Mums are looking better than in any previous season and have been planted in larger quantity.

There has been considerable call for palms, ferns and rubbers of the smaller sizes and good clean stock has been picked up quite rapidly.

A visit to the private place of Mr. E. H. R. Lyman, where Donald McGregor holds sway, found everything in first-class shape as usual. Some tuberous begonias of Donald's own strain were grand and show what careful selection and hybridizing can accomplish. November 4, 5 and 6 are the dates set for the third chrysanthemum exhibition of the Hortlcultural Society which bids fair to surpass all previous efforts. G. W. THORNILEY.

Greenhouse Building.

GREENHOUSE WOODWORK.

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

NOTWITHSTANDING the exceptionally warm weather in October, the fact remains that November 10 should find with the most of our readers plants, roots and similar stock housed and well protected against freezing.

Rose Notes.

Hybrids that are expected to be in bloom at Christmas will require to be kept moving right along; failures at this season are generally the result of a setback of some kind after the eyes are started and everything appeared to be very promising. A few years ago when hybrids were forced very extensively for the holidays, and sometimes earlier, it often happened that many of the earliest houses were a partial if not complete failure, and that too regardless of the strength of the plants or the condition of the wood. The forcing process is comparatively easy in the beginning, but after the young shoots are about an inch long is the time we are liable to get into trouble, if everything is not favorable when that stage of their growth is reached they become stunted, stop growing, and do what we may it is impossible to start them again at all satisfactorily, and if any flowers are developed they will be short-stemmed, small, and lacking in character. To avoid this condition of things we must increase the night temperature immediately the eyes have all pushed, from 50° to 53°, and a week later to 56° and later possibly to 58°, with a corresponding increase during the day, maintaining at the same time a moist atmosphere and an adequate supply of moisture at the root.

There will be less risk from blindness as a result of too rapid growth than from being stunted by too slow a process. If they have not been mulched a dressing of good rich material may be applied to advantage, and a dose of weak manure water once a week will also assist them.

After the setting of buds commences the soil should never show much tendency to dryness, an abundance of moisture at the root afterwards is very essential to fine long-stemmed blooms.

ROB'T SIMPSON.

Summer Blooming Roses.

From J. W. M., Kansas, comes the following: "We have a bench of roses planted in June that we depend upon for the winter, we have also a solid bed of two-year-old plants that have bloomed finely all summer and are now in splendid condition; query, which would be best, throw them out this fall and use the space for something else or keep them over for next season, and if we discard them now what plan should we follow in order to have flowers next summer while the small winter blooming plants are becoming established? How many years would it be profitable to run a solid bed of roses?"

To answer the above intelligently it would be necessary to know if the bench of winter blooming plants and the solid bed are in the same house, and if they are in different houses whether the solid bed takes up the whole house so that the conditions may be made to suit the roses without taking anything else into consideration. If there is only one house I imagine the wisest plan would be to run the solid bed along through the winter as long as it is profitable or until April 1, then replace with young stock. To be certain of having good blooms next summer the plants would need to rest this winter, which would be impracticable if not impossible in a good growing atmosphere. If they have a house and can be treated any way you wish I would advise blooming them until after the holidays, then gradually lowering the temperature to a degree or two above the freezing point, withholding water at the same time, until about April 1, when they may be pruned pretty thoroughly and started up slowly, beginning at 50° by night. Summer roses in solid beds, provided they are properly constructed, with ample drainage, may be grown year after year and retain their health and vigor almost indefinitely.

ROB'T SIMPSON.

Mulching Carnations.

Do our carnations need a mulch? We planted them in the benches September 24, they are making a splendid growth and are all in bud and bloom. The roots are running along on top of the soil. Does that indicate that they are in need of a mulch of some kind? If they do, what shall we use and in what proportion?

C. A. M.

When the roots come to the surface it is always a sign that a mulch of some light nutritious material will be beneficial to the plants. They come to the surface in quest of food, which is always more readily dissolved where the soil is nearest and directly under the influence of light and air; it is to some extent a sign that the plant is in a condition to assimilate more ready food than the soil contains at

the time. But we only see them come to the surface when deeply shaded or during the darkness of night, I may say they come to absorb, to eat what light and sunshine has cooked for them; when exposed to light and sunshine they will soon perish; they are out of their element. Now what is more suggestive than to cover the soil with a light nutritious material, that will not exclude the air, but shade the soil and protect these roots, and at the same time furnish food. It will also keep the soil in a more evenly moist condition, it prevents the drying out and parching of the soil, allows the roots to come more in contact with the air, without getting injured or destroyed.

It is a rule with us to mulch the plants as soon as the first crop of weeds is destroyed. Now I would not advise to stir the soil deeply in doing this, a sharp little hoe is the best instrument to use, we only scrape the surface deep enough to destroy the young weeds, and after this we put on the mulch.

As a mulch I prefer well rotted cow manure; any other stable manure will answer, only it should be well decomposed. Of this we take three parts manure and one part soil, mix it thoroughly and make it quite fine. With this can be mixed anything in which we think the soil may be deficient, as wood ashes, air slacked lime, bone meal or horn shavings and lay it about one inch deep over the soil, taking care not to pile it close up around the plants, but rather leave the stems free. After this we give the bench a good sprinkling of the copper solution. This is the only time we now use any fungicide, and I have found it at this time a preventive, and even a check to stem-rot. FRED. DORNER.

American Carnation Society.

THE AMERICAN CARNATION SOCIETY, FELLOW MEMBERS: The amendments to the constitution and the proposition for change in the method of judging seedlings will be brought up for your consideration in Chicago. Please give them your careful attention, and if unable to be in Chicago, write your secretary any changes you may think of.

Our by laws are in proceedings of 1891 and 1892. If you do not have them, and your dues are paid to date, they will be forwarded on application to your secretary. ALBERT M. HERR, Secretary.

Lancaster, Pa., October 12.

GENTLEMEN OF THE AMERICAN CARNATION SOCIETY:—With the approval of the society the following instructions will be issued to the judges at our next exhibition in Chicago.

Instructions to Judges.—A full written report is requested. A vigorous and literal construction of all published rules and requirements is desired, and all plants and flowers are to be judged on their merits as shown, except as otherwise especially ordered. In case flowers or plants shipped from a distance have been so badly damaged by rough handling in transit as to render their consideration an injustice to the exhibitor, they shall not be considered and it shall be so noted in the report.

In applying the scales of points it is to be understood that the points allowed do not indicate absolute but only relative quality. In judging any class under the seedling scale of points the seedlings shall be compared with the best specimens of the best similar varieties in commerce, whether such commercial varieties are on exhibition or not. If the best colored seedling is better in color than the best similar colored commercial variety it shall receive the full number of points allowed for color, but if the commercial variety is of better color than the seedling it shall receive a proportionally less number of points. If any seedling shall have a distinctly new and desirable shade of color it shall receive the full number of points for color. In considering the stem, the seedling shall be compared with that variety in commerce considered by the judges to have the best stem and so on through the scale.

In judging the scale for general competition only those varieties in competition shall be compared, the exhibit showing the best color to receive the full number of points for color; that showing the best stem the full number of points for stem and so on through the scale.

Signed, W. N. RUDD, President.
Attest, ALBERT M. HERR, Secretary.

A proposition for change in the method of judging seedlings. In the seedling scale when used for final certificate insert 10 points for "Reports of Growers" and reduce other points to correspond (especially calyx, which is too high as no variety can have a good form without a fair calyx). To secure points under this head the exhibitor to name not later than June 1, preceding the exhibition, not less than three growers (greater number to be considered favorably by the judges) preferably in widely separated parts of the country, to whom he proposes to send stock of the variety for trial, these growers to report direct to the Secretary not later than February 8, nor earlier than February 1 following.

All reports on a variety to be thrown out unless each grower nominated sends in a report or satisfactory reasons (which the secretary shall lay before the judges in writing) shall be given for failure to do so. The reports shall be examined by the judges after they have finished judging the exhibits as shown, they to take into account the character and quality of the growers reporting as well as the nature of the reports. The seedling having the most satisfactory reports to receive the full 10 points and the others proportionally less. If from the reports (considered from all points) it shall appear to the judges that the variety is unworthy, the previous scoring shall be cancelled and the judges shall enter in their report "Rejected on account of unfavorable reports" This action however, shall not be taken unless the reports are distinctly and uniformly unfavorable. Reports to be made on a printed form prepared by the executive committee and approved by the society.

Exhibitors failing to have varieties tested as above to forfeit the whole ten points. Failing to receive reports after the exhibitor has announced the names of those who are to make the test, unless satisfactory reasons are given in writing the secretary shall withdraw the variety from consideration by the judges and it shall be so announced and published.

Signed, W. N. RUDD, President.
Attest, ALBERT M. HERR, Secretary.

Amendments to Constitution of American Carnation Society.

Art. III sec. II, After first word insert the word "Reputable." Art. IV, Sec. I After the word year add "and until their successors are elected and qualified." Art. VI. Before 'a meeting of the executive, etc., insert following, "A special meeting of the society may be called by the president with the consent of the executive committee or they shall be called on the written demand of not less than 15 members of the society. Notice of such meeting shall be mailed to each member not less than ten days previous to the date fixed for holding the meeting and no subjects shall be acted upon except such as are mentioned in the call. Voting at a special meeting by authorized proxy shall be allowed."

Art. VII, strike out word annually in last line, and add the following, "At the first session of the society at which there is an exhibition the president shall after consultation with the Ex. Com. nominate six members known to be present for judges. The meeting thereupon shall either accept or reject the nominations or call for the nominations of additional members. When nominations shall have been made by the president and accepted by the meeting nominations shall be closed and the meeting shall proceed to vote for three judges by ballot. The three nominees receiving the highest number of votes shall be the judges to pass on all exhibits at the exhibition of the meeting at which they are elected and shall award all premiums and certificates. All protests against the decision of the judges shall be filed in writing with the Ex. Com. promptly. In case of protest by a member of this society or an exhibitor the Ex. Com. shall examine into the matter carefully and if they consider an error has been made shall report to the society with suggestions as to its correction, otherwise they shall confirm the action of the judges. In all cases of protest no premium shall be paid or certificate delivered until the judges' action is confirmed by the Ex. committee or the protest has been settled by the society as the case may be."

By laws.—Sec. I, Insert after absence the words "or disability." Sec. II, Cancel and substitute the following: "The secretary shall keep a true and correct account of the proceedings of the society and shall conduct its correspondence. He shall have charge of its books, papers, reports and other property except as otherwise provided by by-laws. He shall make an annual report." Sec. III add, "He shall give bond in such amount and such sureties as may be from time to time required by the Ex. Com." Sec. VII, Strike out words after receiving such notice

Amend constitution, Article VII, by adding following If any person shall be convicted of dishonest practices in connection with any exhibition of this society he shall be forever debarred from exhibiting before the society or receiving from it any certificate, premium or award. If a member he shall also be publicly expelled from the society." Signed, W. N. RUDD, President.
Attest, ALBERT M. HERR, Secretary.

Coming Exhibitions.

[Secretaries are requested to supply any deficiencies in this list.]

BOSTON, Nov. 2-5. Chrysanthemum show Massachusetts Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

PROVIDENCE, R. I., Nov. 11-13. Chrysanthemum show Rhode Island Hort. Society. C. W. Smith, Sec'y, 61 Westminster street.

NEW YORK, Nov. 12-13. Exhibition New York Gardeners' Society. J. H. Troy, manager, 365 Fifth avenue.

CLEVELAND, Nov. 16-19. Chrysanthemum show Cleveland Florists' Club. G. A. Tilton, Sec'y, 85 Woodland Ave.

Chrysanthemum Society of America.

The committees judging new seedlings will be in session October 23 and November 6, 13, 20, 27. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than Tuesday of the week the blooms are to be shown. Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

BOSTON.—A. H. Fewkes, Horticultural Hall.

FLORAL ARRANGEMENTS AT THE HAMBURG EXPOSITION. No. 3.

NEW YORK.—Eugene Dailledouze, care of Dr. F. M. Hexamer, Madison Square Garden.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, corner 4th and Walnut streets.

CHICAGO —W. N. Rudd, room 202, 185 Dearborn street.

Those desiring further particulars address ELMER D. SMITH, Sec'y, Adrian, Mich.

WORK OF THE COMMITTEES.

At the committee meetings on October 16 new chrysanthemums were passed upon as follows:

NEW YORK.—Mrs. Arthur Caton, exhibited by W. N. Rudd, Mt. Greenwood, Ill. Jap. Light mahogany color, scored 55 points. Ben Nevis, exhibited by Wm. Anderson, Mamaroneck, N. Y. Jap. Ref. Creamy white, striped pink, scored 80 points.

CINCINNATI —Boundless Snow, exhibited by E. G. Hill & Co. for H. Yoshiike, Oakland, Cal. Jap. White. Scored 87 points. Mrs. Arthur Caton, exhibited by W. N. Rudd. Bronze. Scored 75 points.

PHILADELPHIA —Mrs. Arthur Caton, exhibited by W. N. Rudd. Jap. Ref. Bronze. Scored: Commercial, 88; exhibition, 91.

BOSTON —Mrs. Arthur Caton, exhibited by W. N. Rudd. Japanese. Reddish orange, reflex orange yellow. Scored 75 points. ELMER D. SMITH, Sec'y.

Judging Seedling Chrysanthemums.

Saturday last, October 16, was the first date on which new chrysanthemums were exhibited in the Quaker City under the auspices of the Chrysanthemum Society of America this year. The new candidate came all the way from Chicago and arrived in good shape. Mr. W. N. Rudd was the exhibitor. "Mrs. Arthur J. Caton" is its name, bronze its color, and Japanese its type. By the way, I have often wondered why some varieties are called Chinese and others Japanese, because from what I can learn each type is found growing in both countries indiscriminately; but whether in the back ages each of the now recognized respective types were indigenous only to the countries after which they are denominated I could never get any satisfaction. This new variety is said to be a cross between Yellow Queen and Mrs. E. G. Hill, both early varieties. It is good in form, quite full with stout stem, ample foliage, and fair in size. Its color as a commercial variety is against it, as there is only a very limited number of bronze colored chrysanthemums needed generally. Whether it was awarded a certificate or not correspondents are not permitted to say, for that information, according to what passed at the meeting of the Chrysanthemum Society of America held in Providence last August, must come officially through the Secretary of the Society, Elmer D. Smith, Adrian, Michigan.

An incident happened at the Providence meeting worthy of record here, and that is, it was stated that the Philadelphia committee are criticised more or less severely for awarding a first class certificate to Wm. Simpson, whereupon Eugene Dailledouze spoke up and said that he saw it in such condition last fall that it would have been worthy a certificate from any committee, and so it goes.

I can recall a statement made by a Boston judge (and it goes without saying they are all good judges in Boston) that no set of judges or committees of awards can foretell how a variety will behave in after years—they can only judge of it as it appears when brought before them. It was instanced that the variety Harry May received the award over Mrs. Jerome Jones on one occasion. The former is gradually going out of cultivation, whereas the late Mr. Gane's seedling still holds its own as one of the very best varieties ever raised. If all chrysanthemums had the great constitution possessed by Mrs. Jerome Jones good flowers would be very much easier to grow than they are now. PHILA.

Floral Arrangements at the Hamburg Exposition.

PLATE NO. 3.

The pillow was of white scabiosas, lavender centaureas and cattleyas with rosettes of lavender ribbon in two corners. The lyre was a red effect, obtained with red berries, anthuriums, tritomas and other dark red flowers. The shield was of lavender asters, a bunch of cattleyas, ferns and sprays of dendrobium giving a fine effect. The basket of cactus dahlias was an arrangement in yellow, with ribbon to match. The cross was composed of white cactus dahlias finished with cissus, asparagus and white lilies.

PLATE NO. 4.

An arrangement of cycas and palm leaves with lilies, spiræas and orchids.

PLATE NO. 5.

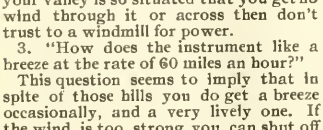
The cross and heart were badly formed, but the backing of palm leaves was excellent. The basket of plants contained crotons, caladiums, etc. and was very choice. The plaque had a ground of dark scabiosas finished with white roses, dendrobiums and Asparagus Sprengerii. The basket of M. Niel roses was a very striking effect in yellow.

Wind in a Valley.

A subscriber from Alabama who has read what I have had to say about the Aermoter windmill sends the following questions:

1. "How does he keep his Chicago Aermoter in motion during July, August and September? We need more water during those months than the other nine put together."

The wind blows here in those three months as well as in winter, spring and fall, and as it takes but the gentlest breeze to turn the mill we have never found any trouble, only employes are apt to tie up the mill and not give it a thought long as there is a drop of water in the tank. Keep it going all the time and keep your tanks full.



2. "As he lives 1200 feet above sea level with mountains several hundred feet higher all around us should the tower be high enough to catch the breeze coming over the tops?"

It would be expensive (if necessary) to build a tower "several hundred" feet high and not only would the first cost be overwhelming but the weekly operation of oiling the machine would necessitate your keeping a professional aeronaut on the place. No, that is an absurd question. If your valley is so situated that you get no wind through it or across then don't trust to a windmill for power.

3. "How does the instrument like a breeze at the rate of 60 miles an hour?"

This question seems to imply that in spite of those bills you do get a breeze occasionally, and a very lively one. If the wind is too strong you can shut off mill and there is no more to catch the wind either in tower or wheel than there is in an ordinary weather vane. You can adjust the wheel of the Aermoter to take any quantity of wind that you consider safe.

WILLIAM SCOTT.

Orchids for Florists.

It has been suggested by a subscriber to this paper, that a few hints as to the proper treatment and best kinds of orchids for the average provincial florist to invest in would be of benefit to the readers of the paper at large. It is unfortunately too true, that those who have been and are, in a position to furnish just such knowledge, have been apt to throw a halo round the plants, throwing both the plants and their treatment under a veil of mystery, and officiating as high priests at spasmodic intervals, when there is a new plant to be placed on the market, or a specially rare variety to be discovered to the reading public.

In these notes that may appear, the writer wishes it to be understood, that he has never had a plant to sell, probably will not have, and the little knowledge gained has been gathered from experiments made under conditions such as are at the command of every florist who has a rose-house temperature in his establishment. Our first plants of cattleyas were grown suspended in the rose-house; the same house has been transformed into a house for cattleyas and other subjects, the original benches being there still, and the exact temperatures being maintained, the only difference being made in regard to shade for the occupants.

An inquiry from an Ohio correspondent contains under two heads, about all the questions that need to be answered, viz. "When best to obtain from the dealers, and how to handle on arrival, i. e., as to repotting, also potting material, and location in house. Then how to treat when through blooming, stating if best to increase or grow on, watering, shading, and best kinds to produce flowers that would be useful for florists purposes from December to March."

All of these queries will be answered in due course, and the replies will be made as lucid as possible. There are so many little details that a beginner needs to know, and there being no work published that applies to our climate, that is at once so suitable and yet so different from that of Britain, to which all the present works in the English language apply, that one has to modify the whole, and that is experiment pure and unadulterated, such as the writer has indulged in for the past few years.

Many florists may doubt the wisdom of attempting the culture of orchids. We are accustomed to see them described as the plants for the millionaire, and not for the million, and still we see that the leading magazines have given space to some of the most able articles on this fascinating family that exist in our language, at least for popular digestion, and the cuts that illustrated one of these articles have been acquired by a leading English horticultural paper and appear at intervals with matter written to illustrate the accuracy of the drawings.

If more evidence were needed of the march of the times, a week or so ago I was told that one who was until recently a leading rose grower of the metropolis, is to-day the largest commercial orchid grower; all this change in less years than one could count on the fingers of one hand, and it is highly probable that he did not construct new houses for the change of crop. The fact is that most all who read—and who does not?—can to-day converse intelligently about orchids, and, a sure sign of mastering the rudiments, can pronounce the word correctly.

There is a fascination about this great order of plants that does not seem to attach to any other; at least it almost amounted to a hypnotic influence with me from boyhood, and the few plants that my father grew were, when in bloom, the subjects of much homage, more I fear than the parental progenitor at times, and while the first has never diminished, it should also be stated that the latter grows with the years, and by way of an explanatory note it should be stated that my own more recent experiences as "pater" make me wonder how he had as much patience as he did.

All plants need to be treated as one would their offspring. It is often said that the touch of some people seems to make plants grow, and it is true that plants need that sympathetic touch that is life, and none more so than orchids. They give value according to attention received, and while they are in the main no more difficult to grow than roses (I have found the rose much harder to grow), they resent much more readily any lack of attention or proper conditions, and it is a long up-hill road that brings them back to vigor again.

The greater number of the showy varieties of orchids that are suitable for florists' use are natives of the western hemisphere; the large genera of cattleya, odontoglossum, miltonia, oncidium and others are all from the various parts of Central and South America, and we are most favorably situated to get them at first hand. It is not necessary for them to make a trip across to Europe and then back to the auction rooms in New York before we can get them. Business competition has brought the importation of plants to a fine art. I have seen a number of cattleyas this summer that made their growth in Colombia and produced their flowers in the United States; this tells of the close connections made by collectors and the perfect condition in which the plants came to hand, and while we are constantly told of the diminishing supply, the cost to the grower does not seem to be any more, rather less perhaps than under the older regime. It is true that for plants from the east such as dendrobes and cypripediums we must still receive by way of Europe, but as the demand increases more may follow the example of that intrepid collector Forstermann, and send out men who will bring them home to us direct.

Comparatively little has been done here in the hybridizing of orchids, though there are several brilliant exceptions, and many more are getting the fever each year. It is now within the reach of possibility that if the supply of cattleyas and lælias ceases the home raised crop will supply the gaps in the ranks and keep up the interest at least of the cultivators. It is most fascinating work and of all-absorbing interest both to the cultivator and to the vegetable physiologist, to whom the transmutation of form and coloring is a source of never-ending wonder and charm. There is nothing more wonderful in the vegetable kingdom than the arrangements for the reproduction of orchids, and the minute seeds that the least breath is sufficient to diffuse into the air, and the subsequent change that takes place after sowing, which will make the subject of a later note. It has proved of so much more interest than any other cultural operation that has come under my observation in the 25 years that it can be said to have reached the acute stage.

E.

Miscellaneous Seasonable Hints.

AZALEAS.

The disposal of early crops of chrysanthemums is a boon to many of us for we badly need the space they occupied. The azaleas, rhododendrons and bottle brush plant have arrived. I spoke of the azaleas and their treatment a week or two ago, but I forgot to say it is of great advantage to keep the azaleas in their sorts and not all mixed up. The late varieties, or those you do not want in flower till Easter, can be put into the coolest house, or even a deep cold-frame would be an excellent place. But early varieties, such as Deutsche Perle and Simon Mardner can be put into a warmer house. This may seem like premature forcing, but getting any of these newly imported azaleas into flower by Christmas is terribly unnatural, and you might just as well take two months over it as to force them out under a great pressure of heat in two weeks. A Deutsche Perle that sells for $2 or $3 at the holidays is not expected to survive forever and will certainly last longer than a bunch of flowers, so no deception is practiced.

THE BOTTLE BRUSH.

The metrosideros with me were not profitably handled last year because they were kept too cool all winter with the idea that six weeks forcing would bring them in at the desired time. This is not the way. Give them a warmer house than you would azaleas, and if a few come out earlier than you expect they sell readily. I also found that with strong forcing they lost their flowers almost as soon as de-

FLORAL ARRANGEMENTS AT HAMBURG EXPOSITION. No. 4.

veloped, so let the coming on of these very attractive plants be gradual rather than with extremes.

BULBS.

This has been one of those falls when bulbs that were planted early and put outside and covered with a few inches of soil or tan bark would need a good weekly wetting, for no rain to go down one inch has fallen here in six weeks. If your Paper White narcissus are well rooted you can bring in a lot weekly and the same with Roman hyacinths. I don't think large quantities of either of these pretty flowers pays before the holidays. By December you can force Romans in three or four weeks, but not so with the Paper White, or at least it is not advisable to try, for when forced in much heat they are weak, spindling things. Give them eight weeks in a cool light house and they are worth cutting.

The ground has been too dry for you to plant any bulbs for your customers, but when doing it don't forget to get the bulbs well down; six inches is not too deep to plant tulips; they will be nearer the top by spring. Plant good varieties for your patrons; they will pay for fine sorts, will bless you and call round for their other wants. The finest bed of tulips I ever saw was on our Delaware avenue last spring. The bulbs were as good as could be imported; they were planted about five inches apart, and the varieties were Belle Alliance (Waterloo), La Reine, Yellow Prince, Rose Grisdelin and Kaizerkroon.

CYCLAMENS.

Those people who grow prize cyclamens sow end of September or early this month, but there is lots of time. If you wish good sized plants a year from now sow at once and see that you get the best strain of seed. Cyclamen is irregular and often takes considerable time in germinating. The covering often gets very weedy, and worse, covered with moss, so if you could bake the soil with which you cover the seed it would save you pulling out weeds and be in a healthier state for the little plants to thrive during the first six weeks of their existence. Keep the seed box in a temperature of 60°. There is not much troubling the cyclamens that are now just beginning to flower except aphis, and that is easily kept down by tobacco smoke, which does no harm to the plants and very little to the flowers. On bright mornings the cyclamens should get a gentle syringing. It will keep down spider and thrip.

VIOLETS.

I lately had an attack of spot on violets. Every affected leaf was pulled off and no more has appeared. Don't be afraid of the spot; it is easily cured, and be sure not to use any chemical on the violets; it will kill the leaves sure.

W. SCOTT.

Dahlia Notes.

The arrival of cold weather compels us to lift and store away dahlia roots for the winter. How soon after the first frost this shall be done is an important question. Many think it an advantage for the roots to remain in the ground for some time with the idea that they thus ripen. This ripening is largely a myth. Roots which are taken from the ground the day after the frost has killed the foliage will keep as well and start in the spring as freely as those which remain in the ground two or three weeks. Where they remain in the ground there is a tendency for the buds to start, especially if the first frost is followed by a considerable period of warm weather. While these young sprouts may remain unharmed, ready to continue their growth in early spring, there is danger that they may suffer harm in the various processes of digging, storing and bringing out in the spring.

The greatest danger, however, in allowing them to remain in the ground is in the liability of the stalk to freeze. It often happens that a very cold night will freeze the surface of the ground sufficiently to form a crust long before there is any danger of a permanent freeze. This freezing of the ground around the stalk of the dahlia is disastrous. The tissue of the stalk is disintegrated and no matter how sound it appears when taken from the ground, the stalk is almost certain to decay down to the crown of the tubers and to communicate decay to the tubers themselves.

The safest rule is to dig just as soon as possible after the frost has killed the foliage. Select a dry sunny day. Use a spade or spading fork. Press the spade down as far as it will go on each side of the clump of roots, then work it under the clump so as to lift them bodily. After lifting jar off the soil which adheres by striking the stalk with the spade. Do not pull up by the stalk nor strike the dirt off. Either process will cause damage by breaking off roots from the bunch or injuring the necks where these are long and slender, as is the case with many varieties. Allow them to remain in the sun long enough to dry off the moisture, and they are ready to store away. Cut stalks low or high, as is convenient. Split bunches through the stalk when that is large and hollow. H. F. BURT.

Taunton, Mass.

A Violet Query.

I have a bed of single violets that have grown foliage so rapidly and so thick as to give me some anxiety about the flowers, which seem to mature most about the outside edge or where the leaves are less thick or plentiful. Will you advise me as to the propriety of thinning out the leaves in order to give the buds a better chance for development, or of any other course to pursue under such circumstances? Also at what time in the autumn it is proper to remove the lime or shade from the glass over violet beds.

SUBSCRIBER.

Subscriber should not thin out the leaves of his violet plants, as they are the lungs of the plant. Keep them cool, 45° to 50°, and if nothing else but plenty of leaves is the matter with them he should have an abundance of flowers shortly. Let him beware of red spider; they thrive in a warm dry atmosphere; water applied with force to the under side of the leaves is the remedy. Remove shading at once.

Rhinebeck, N. Y. GEORGE SALTFORD.

New York.

CUT FLOWER MARKET SUFFERS.—CHRYSANTHEMUMS PILING UP.—ORANGE TREES AT CHAS. ZELLER'S.—DISPLAY OF ORCHIDS.—NEW CARNATION C. A. DANA DOING EXCELLENTLY.—SILVER MEDAL OFFERED BY N. Y. FLORIST CLUB AT COMING SHOW.—VARIOUS ITEMS.

The cut flower market is suffering from the effects of the pleasant summer weather which hastens the blooming of all indoor crops and retards the disposition of the public to buy flowers. This fire from front and rear naturally demoralizes the whole industry and it is unquestionably true that business has never before been in worse condition in October than it is this year. There is an accumulation of everything in the cut flower line and an adequate outlet is an impossibility. Chrysanthemums are rapidly piling up and there will now be little relief while they last even if the weather should veer to Alaskan inclemency. Violets alone resent the warm spell and are coming in in very poor shape.

Cannas, salvias, dahlias, morning glories, marigolds and other garden flowers of all descriptions are still blooming gaily in Flatbush, and even coleus, which is about the first to succumb to fall weather, holds its foliage well yet. No better sign for a plantsman's business could be devised than the garden in front of Louis Schmutz', which is the gem of Clarkson street. Louis has within some of the finest primroses ever grown. His chrysanthemums look well, the only defect seen being that mysterious rotting of the petals on Merry Monarch here and there, which has puzzled other chrysanthemum growers.

Chas. Zeller & Sons are still at the orange trees. The new house built this year is filled with them and they are very promising, as are also the ardisias. Pteris Zelleri does all that was expected of it and makes an admirable little jardiniere plant, the fronds being very tough and persistent. Mr. Zeller is greatly pleased with Asparagus Sprengeri, which he regards as the ideal hanging basket plant. The Zeller establishment is one of the neatest commercial places on the continent.

The visitor to Flatbush should not fail to call at the beautiful place of Mr. Wm. Brown, where P. Riley is in charge of the conservatories. The collection of stove and greenhouse plants here is very complete and they are always in good shape. A special attraction at present is the display of Cattleya labiata. Lælias and phalænopsis also show that in their season they will be grand. The moss bank which covers a brick wall in the palm houses is a notable feature of this place. It is surprising to see how many plants take kindly to this culture and grow elegantly for years in nothing but wet moss. Beside the ferns and creepers there are marantas, begonias, crotons, pandanuses, fittonias, anthuriums and other things in great variety and they all grow luxuriantly.

The new carnation, C. A. Dana, is doing excellently, so far, with A. H. Burns at Woodside, and he is greatly pleased with it and also with Flora Hill. Harrison's White made a good growth and is beginning to bloom. Mr. Burns has a sport from Minnie Cook with deeper and more abundant stripings on the flower. It is an improvement on the parent variety, in that it shows no disposition to burst. Portia is still a favorite carnation with Mr. Burns. On account of the tendency of this variety to die out after planting on the bench, he finds it a good plan to give them a shift into pots for a couple of weeks before putting on the bench. Two houses of mignonette, of which the seed was sown on July 24 and August 5, respectively, are widely divergent as to crop; one being now in bloom and the other fully six weeks behind. Last year's returns from flower sales dampened Mr. Burns' ardor for chrysanthemum growing and he has but few this year. Unless this season shows up better in this respect than present appearances indicate there are plenty of growers in this neighborhood who will follow Mr. Burns' example next year.

A circular has been sent to the members of the New York Florists' Club by Secretary Young calling attention to the silver medal which the club offers for the best exhibit of chrysanthemums at the November meeting, twenty-five blooms in not less than five varieties. Intending exhibitors should notify the secretary at 51 West 28th street not later than November 5. Competition is open to all.

Siebrecht & Son will have one of the most roomy as well as one of the most sightly and well appointed stores in New York when alterations now in progress are completed. The adjoining store formerly occupied by a milliner has been added and the partition wall taken out, thus giving nearly double the original frontage on Fifth avenue.

W. H. Siebrecht has finally been awarded the full amount of damages claimed from the gas company for damages to plants resulting from a leaky gas main. The case has been in progress for two years and the original decision of the court has been affirmed by the court of appeals.

Ferdinand Boulon and daughter sailed for Europe on October 16.

Chicago.

TRADE FAIR ONLY.—PRICES WEAKER.—AMONG THE WHOLESALERS.—ST. LOUIS BOWLERS COMING.—A FLORIST COMMITS SUICIDE.—AMONG THE RETAILERS.

Trade the current week has been fair but on the whole doesn't show any marked improvement on the week previous. Chrysanthemums are now coming in very freely, and in consequence are exerting an influence on prices of roses and carnations, particularly the latter, which have taken a decided drop. A few of extra fancy sorts, such as Pingree, Lily Dean, and a few others, are held at $2 per 100, but in ordinary sorts 75 cents to $1 is the top price for the best grade of stock. The bulk of the stock sells for much less. The latter part of the week 50 to 75 cents might be considered the price for average quality. The quality of 'mums is very good but the prices realized are on the average lower than those of preceding seasons. Extra high grade bring $2 per dozen, but very fine blooms can be had at from $10 to $15 per 100. In whites Mrs. Robinson is still the best. In yellow we have some very fine Yellow Queens. This variety is much better this year than last. The blooms come a good clear yellow and the tendency of running to bronze, as was the case last year, is not apparent so far. Mrs. O. P. Basset is also a fine yellow for which there is a good demand. Whilldin is being cut in quantity, but of indifferent quality. There in a scarcity of good pink, very few Mrs. E. G. Hill being grown this year. Roses on the whole are of fair quality, but there is considerable mildew noticeable. Prices of first quality stock remain about the same as quoted last week, the poorer grades however are selling much lower. Violets are now being picked in limited quantity. Californias are of fair quality, but the doubles are as yet rather poor. Prices range from 50 cents to $1.25.

Kennicott Bros. Co. report business for the first half of October much in advance of that of the same period of last year, and at better prices, until the recent slump. Their sales since last week have averaged about as last year, but much more stock has been handled to produce the same amount of money on account of the break in prices.

Vaughan, McKellar & Winterson have added considerably to their stock of supplies, and have filled with their own goods a good deal of the space formerly rented to growers who sold their own stock. Their place presents a very attractive appearance.

At Reinberg Bros'. the rose stock seen was first-class, their Kaiserins and Carnots being especially fine. For Kaiserin they have had a particularly good demand, and the prices realized are very satisfactory, $5 and $6 being the quotations for the choicest stock.

The funeral of the late Geo. M. Pullman has called for a large quantity of choice flowers, the demand being principally for long-stemmed Beauties, violets and orchids, the Central Floral Co. placing one order for 850 cattleyas alone.

The St. Louis Bowling team will visit Chicago Sunday and Monday, and while here will have a game with the Chicago bowlers. Preparations have been made for receiving and taking care of the St. Louis boys while here, and an enjoyable time is anticipated.

The chrysanthemum show will be held in Battery D and Lake Front Armory together the same as last year. The art exhibit will have space in the armory. Rosenbecker's orchestra has been engaged again. Superintendent Rudd has things well in hand.

The Illinois Cut Flower Co. has rented the basement directly under their present quarters at 51 and 53 Wabash avenue, where they will have a large cold-room 30x18 for the storage of cut flowers, etc. The place will be steam heated and fitted up as a first-class depot for cut flowers.

Carl Koehle, a florist at 2245 N. Leavitt street, committed suicide last Tuesday in a peculiarly shocking way. He stood upon a table, adjusted a wire noose around his neck, swallowed a bottle of carbolic acid and then drew a razor across his throat. The man was undoubtedly insane through remorse. He had just received word of the death of his father in Germany, which country he had left some 16 years ago without bidding good-bye to his parents. He leaves a wife and five children. His business was apparently prosperous and he was not known to be in any financial difficulties.

Mr. Geo. Wittbold's store on North Clark street has been newly painted and decorated, and the large double front presents a very attractive appearance. Mr. Wittbold has taken his son's interest in the store, and both greenhouses and store are now under the one name. At the greenhouses the wholesale business in palms, ferns, etc., is growing rapidly.

The Washington Floral Co. has opened a store at 286 North Clark street.

Wells, the florist, has moved down town and is now at 74 Randolph street, under the title Illinois Floral Co.

Among visitors in town was A. Nelson, with F. R. Pierson Co., Tarrytown, N. Y.

Now is the time to prepare advs. for our annual Chrysanthemum Number to be issued November 13.

FLORAL WORK AT THE HAMBURG EXPOSITION. No. 5.

St. Louis.

CLUB MEETING.—'MUMS COMING IN FREELY. —INCREASING DEMAND FOR BEAUTIES.—OTHER FLOWERS —A ROSE WAR.—VISITORS —LOCAL ITEMS OF INTEREST.—BOWLING.

A very pleasant and well attended meeting of the Florists' Club (preceding the chrysanthemum show) was held last Thursday afternoon at 3 o'clock with Vice-president Ude in the chair. President Halstedt could not be present owing to a death in his family. The chrysanthemum show committee reported progress and that everything is running in good order.

Mr. J. Austin Shaw was a visitor at the meeting and was requested by the chair to make a few remarks. Mr. Shaw responded in his usual happy manner and complimented the florists of St. Louis upon the improvements they have made since his last visit. He spoke of the Shaw's Garden and said it seemed home-like to speak of them and often regretted that he was not a son of the late Henry Shaw. After the regular business the meeting adjourned. The next regular meeting of the club will not be held until Thursday, Dec. 9, as the November meeting would come during the chrysanthemum show.

Chrysanthemums are beginning to come in freely. A few of the growers were apprehensive a few days ago that their exhibition crop would not be ready for the show, but with such weather as we are having now there is no fear but that the bulk of the leading varieties will be in good shape. The best of the stock in chrysanthemums brings $3, the average price being $1.50. Southern-grown stuff comes in in bad shape and very small, and most of them are sold for express charges.

The demand for Beauties is increasing daily. First-class stock has advanced to $2.50 per dozen, others according to length of stem from $1 to $2 per dozen. Other roses, such as Meteor, Kaiserin, Bride and Carnot, are bringing this week for firsts $4 and $5, seconds $2 and $3; Perle, Wootton, La France and Bridesmaid, $1 and $2. Roses by next week will begin to feel the effect of the increasing supply of 'mums.

Carnations are better this week in supply and quality. The best are bringing $2; this is fine disbudded stock; for the average grade the price is $1 per 100. Good red is very scarce just now. Mr. Aue, of Lindenwood, is cutting the best red that comes to this market; the variety is Jubilee.

Cosmos is very plentiful now and the price has dropped to 25 cents per 100. The demand for violets is improving; the small single are the best now and sell at 25 cents per 100; California are yet small, but they bring 40 cents. Valley has also been in demand at $4 and is very good. Smilax is better this week, but no change in price.

Last Saturday all the florists below Seventh street had what they called a rose war, all having signs in their windows offering roses at 25 cents per dozen, carnations 15 cents. One store had a sign reading "The best roses in the house, 25 cents per dozen," and yet these same men cried out some time ago that the fakir has ruined our business.

J. Austin Shaw, representing Siebrecht & Son, New York; Chas. Ford, with Herman & Co., New York; and Busch and Purzner, florists, from Jefferson City, Mo., were our visitors last week.

W. W. Coles, of Kokomo, Ind., is sending to this market some very fine Kaiserins and Beauties. Walter says he expects to take a great many prizes at our coming chrysanthemum show.

Andrew Meyer, of South Jefferson avenue, better known as the chrysanthemum king, reports that he will be in it at the show with as fine a lot of plants as ever seen.

Henry F. W. Aue, of Lindenwood, is cutting some very fine carnations. His Eldorado, Jubilee and Alaska are the best seen in this market for a long time.

The firm of Ostertag Bros. has been dissolved by mutual consent. Henry C. will continue the business at the old stand under the old firm name, Ostertag Bros.

At the Bowling Club's roll Monday night there was a full attendance, but the scores made were not so good as last Monday. Our high man in the three games rolled was John Young, with 499; Kuehn second, 485; and Schray third, 467. The high single score fell to Al. Bauer, 183; John Young second, 175; and Kuehn third, 173. John Young is rolling the game of his life just now and says that he is out for the medal. Next Monday night will end the October series, and we roll at the same place again.

J. J. B.

Boston.

WARM WEATHER AND LOW PRICES ON FLOWERS —PRELIMINARY CHRYSANTHEMUM SHOW —VISIT TO F. R. MATHISON AND TO LENOX —ACCIDENT TO AN EMPLOYE.—NEW STORES, WHOLESALE AND RETAIL.—VISITORS.

In common with other sections of the country Boston has been experiencing some very torrid weather. Outdoor flowers had been pretty thoroughly killed off by a previous cold snap, so there was nothing outside to respond to the tropical heat, excepting cosmos, but inside flowers, especially chrysanthemums came on with a rush and the market took the usual course. Chrysanthemums went from two dollars down to fifty cents a dozen in a twinkling and like Humpty

Dumpty in the rhyme, "four score tinkers and four score more, couldn't put them back where they were before." The growers are vowing that another year they will give a wide berth to early whites and some of them are inclined to give a wide berth to all kinds and all colors. One grower asserts that no man can produce good specimen blooms such as are now called for at less than three dollars a dozen and if this is true the shrinkage on the venture at present returns must be discouraging, indeed. Cosmos is coming in good and finds a ready sale. No flower makes a prettier showing in the florist's windows than this, among the ferns and palms. Violets are generally of excellent quality but in light demand, so far. The street pedlers confine themselves mostly to roses and carnations of the popular varieties, all of which are abundant and cheap.

The preliminary chrysanthemum show at Horticultural Hall, scheduled for October 16th, which was expected to bring out a good display of every flowering varieties, could not be called a success. The unexpected appearance of Robert Laurie, of Newport, gardener to C. Vanderbilt, as a competitor, was all that saved it from being a dead failure. In the twelve bloom class there were no entries. For six blooms in six varieties, Geo. B. Green, gardener to Jas. L. Little, was awarded first. The varieties shown were: M. M. Johnson, J. H. White, Mrs. H. Robinson, Dr. Masters, Marie Louise, and Clinton Chalfant. Mr. Laurie's set was equally good and the committee had difficulty in deciding to put him second. His varieties were the same, with the exception of M. M. Johnson and Dr. Masters, for which William Simpson and Gladys Vanderbilt were substituted. In the class for ten blooms of one variety, Mr. Laurie won both first and second, with Marion Henderson and Mrs. H. Robinson, respectively, and J. W. Howard won third, with Glory of the Pacific.

There were splendid groups of orchids in bloom from J. L. Gardner and J. E. Rothwell. J. L. Gardner also showed a good collection of delphiniums, Mrs. Gill some fine belated dahlias, James Comley, bougainvillea and carnations, F. W. Fletcher, Princess of Wales' violets.

Those who were of the fortunate party who visited F. R. Mathison last week, Tuesday, are still talking of the grand time they had and the unlimited generosity of their host. They had the pleasure, also, of inspecting one of the finest rose growing establishments in this section. Fred's liberality and the success of the occasion inspired a number of other gentlemen who were present to extend invitations and several events of a similar character are listed for the near future.

The visit of the Garden Committee of the Mass. Horticultural Society to Lenox was an occasion replete with enjoyment for those who participated. The party was met at Pittsfield by a delegation from the Lenox Horticultural Society and for two days the time was spent in visiting the grand estates in Lenox, and Old Stockbridge and in being entertained as few understand how to entertain outside of the generous horticultural lights of Berkshire County. A banquet at the Bellevue Hotel on Thursday was attended by seventy-five gentlemen and many felicitous speeches were let loose.

Daniel McKinnon, employed by W. H. Elliott at Brighton, fell through a greenhouse roof last Wednesday and was terribly injured, his throat being badly cut by the broken glass. He was taken to the city hospital.

The address of the wholesale cut flower and supply firm of Galvin & Co. is 4 Ordway Place and not as given in last week's notes. It is admirably located for the purpose.

Wax Brothers have opened a very fine retail establishment at 143 Tremont street.

Welch Brothers are building an 18 foot addition to their refrigerator.

Geo. A. Sutherland has thoroughly renovated his place in preparation for winter trade.

Visitors in town: M. Reukauf, representing Bayersdorfer & Co., Philadelphia; Rob't Laurie, Newport; S. Skidelsky, Philadelphia.

Philadelphia.

BUSINESS QUIET PAST WEEK BUT NOW IMPROVING.—SLIGHT ADVANCE IN PRICE ON EXTRA ROSES.—CARNATIONS IMPROVING.—PLENTY OF CHRYSANTHEMUMS.—SOME 'MUMS SCORCHED.—PINK IVORY COMES WHITE.—POTTED 'MUMS.—MEETING OF HORT SOCIETY.—MICHELL'S PREMIUMS FOR COSMOS.—THE WHOLESALERS.—PLANT TRADE.—RUBBERS.

It is no news that it has been very warm, as the daily papers report a like situation all over the country. Still we must speak of it, as the market was considerably affected. Flowers became very plentiful and the demand fell off so that both grower and dealer had a hard time disposing of their stock. It is cooler now, however, and a much needed rain has set in.

Business has been quiet the past week, but is now looking better, and if the cool weather continues may get some snap and life to it. Prices have not advanced except for a few of the extra teas. Some fancy Carnots are selling for $10 and other select teas $5 and $6. With other flowers there is little if any change. There is an immense quantity of cosmos about. The quality of most of it is good, much better than the usual run of other seasons, there having been no killing frost as yet. The price is nominal, the man who has nothing else to sell being lucky to get car fare for his journey.

Carnations are improving. Victor is coming in and bids fair to be one of the season's favorites. W. P. Craig is sending in a few fine Flora Hill that bring $2 readily. Chrysanthemums now make up considerable of the hustler's load. Glory of the Pacific, Mme. Bergmann, white and yellow, Merry Monarch, Mrs. Anthony and a few Mrs. Robinson and Whilldin about make up the list of kinds now in. Prices range from $5 to $25 per hundred, according to grade and quality; good average flowers bring $8 to $12.50 per hundred. Violets are getting better slowly and some fairly good stock can now be had. Doubles sell for 50 to 75 cents per hundred; singles, California, 25 to 40 cents for the same quantity.

The warm weather had a damaging effect on the 'mums. In quite a number of cases partially opened buds were badly scorched by the hot sun and the flowers thus rendered useless. A little shading would have prevented this, but it was so unexpected that when noticed it was too late. Pink Ivory is likely to be scarce this season, it seems to have gone back. At Robert Craig's a house with white Ivory on one side bench and pink on the other fails to show more than the slightest difference, although the cuttings of the pink were taken only from well colored stock. The buds are just opening and show almost pure white and will be hardly deeper as they expand. Chrysanthemums here are looking very fine; not a diseased plant is to be seen. A house of Bonnaffon is particularly fine.

Plenty of potted 'mums are to be seen about the stores. Chas. Meckey, at 16th and Erie avenue, has an immense stock of well grown plants. He is making a 35-foot addition to several of his already long plant houses so as to fill up the lot.

Geo. C. Campbell, Germantown Road and Broad street, is getting into touch with all the trade. His telephone, a brand new one, is No. 9083 D. He is cutting a fine lot of 'mums at present.

The meeting of the Horticultural Society held last Tuesday was rather slimly attended. Business in reference to the chrysanthemum show was transacted and Secretary Rust said that everything pointed to a good display. In response to H. F. Michell's premium of $5 for a vase of cosmos there were twelve entries; these made a fine show and the committee had a hard job to select the two best, first prize going to Frank West. Mr. Michell then kindly awarded an addition premium to each of the other ten exhibitors of $1 each.

W. H. Smith, our new commission man, is quite well satisfied with the way business is coming to him. Our principal wholesale men are now situated close together and covenient to most of the trade. S. S. Pennock's addition is being rapidly pushed forward and will be ready December 1.

Fred. Ehret, of Fairmount avenue, says the up-town stores keep him busy and he don't have much time to hunt up down-town business. He is well satisfied with the outlook.

The plant trade is moving a little faster and the stores report better sales. The H. A. Dreer Co. sent their large van around the past week selling plants right from the stock carried. This is an innovation for this firm but a good one for the retail florist; in fact the next best thing to a market.

Rubbers have been popular as a house plant for a long time but they seem to be in more demand this season than ever. A plant in a 4-inch pot sold last week under the hammer for $2 and several others of same size all brought over $1 each.

Ed. Reid had a nice bunch of sweet peas of the new crop sent him last Tuesday. This puts them into the same class as lily of the valley, an all-the-year-round bloomer. K.

Cleveland.

REMARKABLE WEATHER.—BUSINESS AVERAGES FAIR.—GASSER'S STOCK IN GOOD SHAPE.—NEW CARNATION GENESEE.—BOWLING.—CLUB MEETING ON THE 25TH.

The weather continues phenomenally mild and pleasant for the time of year, there having been as yet only one very light frost that did little or no damage beyond slightly marking a few dahlias here and there. Barring one moderate rain over a week ago, we got no atmospheric condensation except in the form of dew.

Chrysanthemums are coming in much more plentifully, but as yet are in sufficient demand to use up the supply. Prices on them of course are exceedingly various; according to the quality of the blooms they range from three or four cents up to twelve or fifteen in very good grades. Retail prices run from $1 to $3, with some flowers bringing $4. Roses are in fair supply and of good quality. Carnations are good and are offered in sufficient quantities.

A FREE FLOWERING CHRYSANTHEMUM.

Business probably averages fair, some reporting it very good; others say that funeral work is the only thing that keeps them out of the poorhouse just now. Taking it all around, however, and judging somewhat by the relation of waste stock to the supply it would appear that at least very little stock is thrown out just now. When chrysanthemums get into full swing it may be different.

A visit was made to J. M. Gasser's Rocky River establishment lately, where everything was found in its customary good condition. Carnations, notably, were extra fine. Several houses of chrysanthemums in various stages of development were showing up well.

Writing the above remark relative to carnations reminds me of a new white one (in this vicinity at least) named Genesee, and of which Mr. H. A. Hart has a small stock. These plants when seen by the writer lately were exceptionally clean, thrifty and vigorous in their growth and were bearing an excellent crop of buds and flowers. The blooms were, without extra handling or attention in any way, large, long-stemmed and stiff, had good substance and form and were of the purest possible white. The stock was sent him from western New York for trial and the variety at present certainly is exceedingly promising in its appearance.

The bowling club met per schedule Monday evening, October 18, and pulled off a great time bowling, smoking, playing cards and eating a lot of the best grapes that Mr. E. H. Cushman's vineyard can produce. It goes without saying that they were as good as grapes grow. No extraordinary scores were made, but some of the prize poodlers developed a little improvement in their playing that comforted them vastly.

At the regular club meeting October 25 it is very likely that a tempting proposition from local people will be submitted for consideration, relative to the chrysanthemum show. A large attendance is hoped for, as the matter is of great interest and, if submitted in a satisfactory form, may be of great advantage to the club. In any case the matter should be at least looked into very thoroughly and opinions from as many as possible will be of material assistance in arriving at a correct conclusion. A.

Cincinnati.

BUSINESS A LITTLE DULL —FAIR SHIPPING TRADE.—GLOOMY OUTLOOK FOR THE CHRYSANTHEMUMS —CRITCHELL'S NEW STORE —CHRYSANTHEMUM COMMITTEE. —ACCIDENT TO C. C. MURPHY —DEATH OF GEO. MEEK.

Business last week generally speaking was a little dull. Our wholesale houses, however, report a fair shipping trade. Chrysanthemums are now becoming plentiful, but they are not sought after as in former years. The outlook for these flowers is rather gloomy; they are selling at from 75 cents to $1.50 per dozen and very slow at those figures. In roses Beauty has the best sale and the supply is equal to the demand. Smilax has been scarce all fall but will soon come in more freely. Valley is in brisk demand and is selling at $4.

The new store of Critchell's Sons has been fitted up with a very large and up-to-date ice box. It occupies a prominent place in the center of the room and is of the latest C. C. Schmitt & Co., patent. The box complete measures 6x8x18 feet. The front consists mostly of French plate glass permitting a view of the entire inside, which is furnished with five electric lights.

On October 16 several vases of chrysanthemums were staged here before our honorable judges, Messrs. Walz and Witterstaetter. One variety sent by Mr. Rudd, of Chicago, was a bronze with yellow, good flower, strong stem and foliage, but color considered not desirable. Boundless Snow, raised by H. Yoshiike, Oakland, Cal., and grown by E. G. Hill & Co., was also shown. The judges were favorably impressed with this variety. Flower large creamy white, measuring 8 inches in diameter, Japan type, reflexed, certificate. Fred. Walz exhibited a yellow sport of Mrs. H. Robinson. The color is a pleasing canary yellow, growth, foliage and stem identical in every way with parent.

C. C. Murphy, of Beechwood Place, West, Price Hill, is confined to his home suffering from a number of bruises as the result of being thrown out of his wagon Saturday night. The accident happened on Sixth near Elm street and he had to be taken home in a carriage. The boys wish him a speedy recovery.

Mr. Geo. Meek, the well known florist of Covington, Ky., died Monday night October 18, at his home, 416 Scott street, after a week's illness of quick consumption. A special meeting of Myrtle Lodge No. 5, K. of P. was called Tuesday evening to take action and make arrangements for the funeral of brother Meek. He was an active member of the uniformed rank. George was widely known on this side of the river and his many friends will be shocked to learn the sad news. The bereaved family has our deepest sympathy. H. SCHWARZ.

A Free Flowering Chrysanthemum.

I send with this a photograph of a chrysanthemum that originated with us, being a seedling of 1896, of unknown parentage. The first flower appeared September 26, 1896, and at Easter, 1897, quite a number of flowers were cut from it. On August 28, 1897, another crop of flowers was open, and it has flowered continuously since that time. When the photograph was made (October 15) there were thirty flowers and buds on the plant, which is growing in a 5-inch pot, is but 11 inches high above the top of the pot and has had no special care, and no food except what was in the soil, the water and the air.

The flowers are white and in its present unfed condition are from one to two inches in diameter, showing some yellow tubular flowers in the center. It will prove useful for cutting from, and for sale as a flowering plant, and may be the beginning of a race of perpetual chrysanthemums. W. T. BELL.

Franklin, Pa.

San Francisco.

TRADE UP TO STANDARD.—'MUMS BRING GOOD PRICES —SHIPPING TRADE GOOD — PAUL BERKOWITZ VISITS THE COAST.— VARIOUS ITEMS.—CHRYSANTHEMUM SHOWS —CHRYSANTHEMUMS AT MENLO PARK.—GOOD CARNATIONS.

Trade has been up to the standard for the season, during the past few weeks. Nearly all kinds of cut flowers are selling at good prices. Chrysanthemums are holding up very well. Good ones bringing good prices, Queens, Robinsons and Bonnaffons bring from 75 cents to $1.50 per dozen and a large quantity of each is disposed of daily. Small flowers of the different 'mums can be had in any quantity at low prices. The street fakirs are now swarming around the principal corners with large bunches of 'mums for a nickel, but the flowers are generally old and withered. Roses are of a very fair quality and are commanding good prices.

Violets are coming in in limited quantities and selling very good, Marie Louise being the only variety that we have in quantity.

The growers report shipping trade as very good and the prospects for a large trade this season are bright. Smilax and asparagus are plentiful but as yet the demand is not very good. The sale of palms and ferns is also limited. Carnations are rather scarce and selling at good prices.

Mr. Paul Berkowitz, representing H. Bayersdorfer & Co., of Philadelphia, is in this city in the interests of his firm. This is Mr. Berkowitz's first trip to this city and he is much impressed with the amount of business the florists are doing.

Mr. Lester L. Morse, of C. C. Morse & Co., Santa Clara, was in town during the week.

Mr. John Davie paid a visit to Menlo Park last Sunday to see the large display of chrysanthemums.

E. Rosaia & Co. have opened a flower store at 63 Fourth street corner of Jessie. They have had the store fitted up in good style and are sure of success.

J. M. Cleis's new store on Valencia street has an elegant display of chrysanthemums and other cut flowers and is undoubtedly the largest store on that street.

The chrysanthemum show of the Redwood City Floral Society will be held in Redwood City beginning on the 21st and ending on the 23d. To induce the professional growers to compete, cash prizes have been offered for the different exhibits of chrysanthemums, roses and carnations.

The flower show of the California State Floral Society takes place this month in this city. It will last one day only and no admission fee will be charged; certificates of merit will be awarded the successful competitors instead of cash prizes as formerly.

A visit to M. Lynch's greenhouses at Menlo Park is very interesting at present. Mr. Lynch has just completed a very large lath house to be used for palms. The chrysanthemum field is the most interesting at the present time. This season there are about 33,000 plants grown, confined to the chief commercial varieties. Queen is not so much in evidence as in former years on account of its poor shipping qualities, Mrs. Robinson having taken its place. Many thousand Bonnaffon are now in bloom and present a very beautiful sight. They have a yellow sport from the King of Chrysanthemums which is very fine and promises to become a leading cut flower variety. Quite a lot of Dailledouze is also grown. Ivory is about over as also is Whilldin. H. E. Widener is grown for a late yellow. Geo. W. Childs is the leading red. Less Niveus are grown this seasoa on account of its tendency to rot in damp weather. Mr. Lynch reports the shipping trade as very excellent and good prices prevailing.

Your correspondent has seen some grand carnations this week coming from T. Thompson the well known carnation speciallst of Santa Cruz. The climate of that city seems to be particularly adapted to the growing of this popular flower as might be seen by the size of the blooms. His blooms of Flora Hill, Dean Hole and Redondo were very fine, as also was some well grown Jubilee; Della Fox also showed up to good advantage.

Mr. John Gilmore, who recently took charge of Mr. Pottet's large range of glass in this city, has his stock in fine condition and judging from the looks of he place one can expect to see some very elegant stock sent out from this establishment during the coming season.

METEOR.

Toronto.

PECULIAR WEATHER.—BUSINESS INCREASING LITTLE BY LITTLE.—CHRYSANTHEMUMS AND ROSES.—SHOW ARRANGEMENTS TO BE SETTLED.

There appears to be a dearth of news this week; the very peculiar weather we are getting this month seems to be the most prolific subject for conversation. Friday, the 15th inst., the thermometer jumped up to 86°, and Saturday was very warm and close, but on Sunday night and Monday morning there was a sharp hoar frost. A kind of see-saw between the equator and the north pole. Has any one ever taken sufficient notice of the seasons to know whether there is any truth in the saying that when there are plenty of berries there will be a hard winter and vice versa? There are very few berries about here this year, the Mountain Ash trees being almost bare.

Cut flower business is increasing little by little and florists' store windows are getting more and more gay now. Of course chrysanthemums are the staple just now, and there really are some very fine ones to be seen. The wholesale price appears to be all the way from 20 cents to $1 a dozen. Roses I see in one of the principal store windows are offered to the public "from 50 cents a dozen."

The Gardeners' and Florists' Association will to-night settle all the show arrangements. The executive committee will recommend Mr. Geo. Vair for superintendent, Mr. S. Aylett, of Hamilton, for judge of plants and Mr. Gammage, of London, for judge of cut flowers and made-up work.

E.

Buffalo.

DECIDED IMPROVEMENT IN BUSINESS—CHRYSANTHEMUMS SELL WELL.—BULBS.—FOREST FIRES.—DEATH OF GEO. H. LEWIS.—VISIT FROM MR. PETTIGREW.—MR. REBSTOCK HAS A NEW SON.

There is a decided improvement in business of late, not only that which is reasonably expected when frost has killed all outside flowers, but a little more than that. There is a better demand than there has been at this time for several years. Chrysanthemums are in good demand and open none too fast to meet the sales. Yellow Monarch is gone and now Yellow Queen and Lager fill the bill, although Lager with us is decidedly several days earlier than the Queen. How well this good chrysanthemum was named, for it is a queen. Like the queen across the water it reigns a long time, being among the earliest, and if not cut off in its prime grows more beautiful with age and outlasts all contemporary monarchs. Carnations are daily coming in in increased quantity and of good quality. Violets are in fair demand and there is no more than enough to keep our friends supplied.

The duty that Mr. Dingley and the florist committee who went to Washington put on bulbs has been the means of shortening up the supply of tulips, hyacinths, etc., and there is none too many to go round. There will, I expect, be a much smaller quantity forced than for several years, so we can sell our carnations and roses instead, which is entirely in keeping with the views of that worthy protectionist and eminent political economist of Saddle River, N. J.

There is at this writing a dense cloud of smoke hanging over this city, and most likely over a large section of this country. Smoke from forest fires is making a dull day of what would be lovely Indian summer. The fires are getting serious and exist in all directions. I shiver for the fate of many country villages should a breeze and a fire come together. Canada as usual is to blame for our present troubles. There are hundreds of acres burning up a few miles back of the Niagara river. With no rain worth recording for two months the ground is so dry that no planting or transplanting can be done.

I have to record the sudden death of Mr. George H. Lewis, a very prominent business man of this city and a patron of horticulture. Many of the florists who attended the convention here in 1889 will remember the beautiful residence hotel "The Niagara," at which they stopped and many more visited. Mrs. Lewis is an ardent lover of plants and flowers, and from a humble beginning their beautiful private establishment now consists of a fine range of houses, at present presided over by Mr. Fitzwilliams.

An unexpected visitor this morning was Mr. Pettigrew, of Boston. A brief chat and then he was handed over to the care of Mr. McMillan, who would doubtless run up against Prof. Cowell, of the South Parks, and then specific and generic names will fly upward like sparks at the village smithy. I have just learned that Mr. Joseph H. Rebstock has been very recently presented with a dear little son and everybody is progressing favorably. We will surely now have a change of weather.

Kansas City, Mo.

THE CHRYSANTHEMUM SHOW.—FINE 'MUMS.—BUSINESS QUIET.

The preparations for the third annual chrysanthemum and flower show of the Kansas City Florists' Club are being pushed along at a good rate and it will be held this year at what is known as the Kansas City Home Product Show building, 1221 and 1223 Main street. The committee have enough 'mums, etc., in sight to occupy at least three floors of the immense building and will have the best show yet held here. The show has been advertised to a finish this year, owing to a little disagreement amomg the members, which resulted in one or two dropping out of the club, the results of too much "amateur" members and of allowing them to run things. It is to be hoped that this will get fixed up by show time.

There are a great many more 'mums being grown here than ever, and all are looking well. The Heites in particular show some fine ones; it don't seem possible to beat some of their 14-inch plants for size; they are like the top of a tree cut off and stuck in a pot. Business generally is very quiet.

W. J. B.

Sedamsville, O.

R. Witterstaetter has made considerable improvement in his plant this summer, adding three houses short span to south. The new white carnation Evelina is doing nobly and will be one of the strongest candidates for honors this season.

V. M. C.

THE ANNUAL CHRYSANTHEMUM Number of the AMERICAN FLORIST will be issued November 13. It will be as handsomely gotten up as any issued in previous years and will contain many striking original features. Though this number will give advertisers extra value there will be no increase in rates. Send advs. early.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.
Subscriptions accepted only from those in the trade.

Advertisements, 10 Cents a Line, Agate; Inch, $1.40; Column, $14.00. Cash with Order.

No Special Position Guaranteed.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

Society of American Florists.

President Graham has appointed Mr. Geo. M. Kellogg, of Pleasant Hill, Mo., a member of the executive committee of the S. A. F., to fill out the unexpired term of Mr. J. Chas. McCullough, who has resigned owing to business demands which prevent his devoting the necessary time to the duties of the office.

Lilium Harrisii Bulbs.

Knowing Lillum Harrisii bulbs are generally considered valueless after flowering I thought it might be of interest to your readers to know that our L. Harrisii planted out in the garden after flowering have matured better bulbs this season than our imported ones.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

JEROME B. RICE, Pres.; E. B. CLARK, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

CLOSE OBSERVERS of political ways have noted that the seed contract went to Ohio, yet all admit fairness in the award and that the lowest bidder won.

ROCHESTER, N. Y.—James Vick's Sons are removing from their location near the N. Y. C. R. R. depot to more spacious quarters on Elm street near Main, where they have added conveniences and more room.

AMONG THE FIRMS represented at Washington at the time of the recent Government purchase were Robert Buist, D. Landreth & Sons, Jerome B. Rice & Co., Peter Henderson & Co., Joseph Breck & Sons, while a dozen or more other firms submitted proposals.

VISITING CHICAGO.—J. A. Everitt, seedsman, of Indianapolis; H. M. Claire, with S. L. Allen & Co. (Planet Jr.); James Comont, of Messrs. Carter & Co., London; J. C. McCullough, Cincinnati; S. Y. Haines and Miss C. H. Lippincott, Minneapolis; C. C. Bowen, of D. M. Ferry & Co., returning from a western trip.

TELEGRAPHIC ADVICES from Washington indicate that the Henry Phillips Seed & Implement Co., Toledo, O., were awarded the entire Government contract for vegetable and flower seeds for the sum of $69,427, to be put up in packets at Toledo, O. The highest bid was that of the Cameron Seed Co., of Nebraska, who offer to supply the list for $143,983. Messrs. Phillips & Son are certainly to be congratulated on securing such an important order.

Montreal.

INDICATIONS OF BETTER TIMES.—FIRST 'MUMS.—THE CHRYSANTHEMUM SHOW.—A. T. MARTIN INSOLVENT.—NEW STORE.—CEMETERY SELLS PLANTS.—MR. BAIN'S IMPROVEMENTS.

If the readers of the FLORIST have not had much news from the metropolis of Canada it must not be imagined that we have been sleeping or idle; it was only owing to the little animal who had charge of this department being too much engrossed in his own personal affairs to give the necessary time to weekly notes.

The indications of better times for the florist are already very marked. The trade during the past summer has been the best in several years, and there is every reason to hope that it will continue on the same lines through the winter. The weather all summer was very unfavorable to the production of good flowers, it being cold and wet in the early part and excessively dry during the last three months. Carnation plants as a rule were about half the size of last year, but perhaps they will give better results, as they are firmer and better able to resist disease.

The first 'mums made their appearance in the shops on October 1, being just in time to take the place of the late branching asters, which were cut down by frost on the night of September 30. Roses have been plentiful all the fall and of fair quality, but carnations have not commenced to come in in any quantity yet.

The committee having the chrysanthemum show in hand intend to leave nothing undone to make the show of '97 the best ever attempted in Canada. Elaborate plans for the laying out and decoration of the hall are in course of preparation and will be on lines altogether different from anything heretofore attempted in the Windsor Hall. The doors will not be opened to the public until 8 o'clock in the evening, and owing to absence in England of the honorary president, Lord Mount Royal, there will be no formal opening, as has usually been the custom. The admission on the opening night will be 50 cents and on the other two days 25 cents. The dates are 9th, 10th and 11th of November.

The insolvency of A. T. Martin, the florist, has been announced, with liabilities of over $24,000.

T. E. Gorman, of Outremont, has opened a store on Dorchester street, and he has also added about 2,000 feet of glass to his establishment.

The management of Mount Royal cemetery have launched into commercial floriculture on a large scale. I am told that their output of plants the past season was very large.

S. S. Bain has added some glass and rebuilt part of his plant, making his place one of the best equipped establishments in the neighborhood. He has been very successful with his roses this season.

JAMES MCKENNA.

Leominster, Mass.

Jos. Fuller has built a fine carnation house this season 30x130. Mr. Fuller is cutting chrysanthemums of superior quality and is one of the few with whom Golden Wedding chrysanthemums do well, the foliage being luxuriant and clean, and with no traces of the trouble experienced by most growers.

In the neighboring town of South Lancaster chrysanthemums of the highest grade are grown by the private gardeners generally. E. O. Orpet places Sunderbruch at the head of the list of early yellows. At the new Bayard Thayer estate, where Jas. Bryden is in charge, a big artificial pond or tank is being constructed for aquatic plants. It is over 100 feet in length and about 60 feet at the widest part, irregular in outline and cement lined. It will be fed by a natural brook, and when this runs short hydrant water can be turned on.

Jos. Clarke is making extensive improvements in the grounds of which he has charge, which necessitates the removal of many large conifers.

Everywhere in this section violets do well and are a favorite crop. Campbell is the variety most largely planted.

PREPARE ADVS. now for our annual Chrysanthemum Number to be issued November 13.

A UNIQUE TABLE DECORATION.—FLOWERS IN GOOD DEMAND.—STOCK SHOWS EFFECT OF UNSEASONABLE HEAT.

The past week called for quite a few decorations for weddings, dinners and other celebrations; in some of these, flowers were used extensively, in others plants and greeneries along with highly colored autumn foliage was the prevailing feature. At a farewell dinner, given by a wealthy out of town contractor on the completion of a large sewer contract, to the city sewer commissioners and some of his intimate friends, a most unique centerpiece adorned the table. Several lengths of glazed tile with Tee connections, resting and half hidden in a bed of adiantum formed the foundation for the affair; bright shovels, spades and picks, less than half the ordinary size, lay across the pipes; a profusion of white and pink chrysanthemums, Bride and Bridesmaid roses and silk ribbons were used in ornamenting the whole; flowers were pouring loosely from the outlets and were continued the whole length of the table. The effect was really pleasing, although the mere idea of having an imitation of a sewer on a dining table would perhaps spoil the appetite of most anybody but a sewer contractor. But the florist has to humor his patrons and in this case he was equal to the occasion and handled the subject with remarkable success. Violets were used for boutonnieres and the spacious hall was lavishly decorated with large palms, and ceiling, chandeliers and doors draped with asparagus and smilax in a unique manner.

Flowers have been in good demand and were not too plenty. The retail price for chrysanthemums is still from $2 to $3 per dozen but next week a larger supply is expected in the market and it is doubtful whether this price can be kept up much longer. Roses from the local growers show the effects of the unprecedented October heat (in the eighties for nearly every day); with violets the same trouble prevails, flowers small again. Carnations are coming in more freely than formerly and are also of better size. Although there is still a lot of outdoor mignonette offered, the larger and perfect spikes grown under glass find ready purchasers at greatly advanced figures. K.

Pittsburg.

TRADE HOLDS UP WELL —CLUB MEETING, —PROBABILITY OF A CHRYSANTHEMUM SHOW —COMMITTEE APPOINTED —STATE V-P. OF S. A. F.—FAILURE OF P. VOS.

Trade has kept up very well the past week, and the outlook is very encouraging for continued improvement. Stock is plenty and of good quality. The chrysanthemums in the market this week are very fine, fully up to a high standard of quality, but they have been grown in such quantities this year that the prices are very low indeed, wholesale from 50 cents per dozen up to $2 for extra fine blooms. Carnations are coming in freely, roses and violets likewise.

The Pittsburg and Allegheny Florists' and Gardeners' Club held their regular meeting on the evening of the 14th inst. with a very fair attendance. The question of holding a flower show this fall was fully discussed: the conclusion reached was that the club would not give one under its own auspicies, but that if some one or two of the charitable societies would undertake it, being responsible for expenses and of course reaping the benefit of any profits, the florists would get up the show. A committee of three was appointed to see if arrangements on the above plan could be made. Messrs. Fred Burki, T. P. Langhans and E. C. Ludwig were named as the committee; they to report at the next meeting on the 28th inst. At the present time everything looks very favorable for a show, as I understand two or three societies are anxious to undertake it and there may be more in the field before the 28th.

Mr. Gustave Ludwig has received a notice of his appointment as state vice-president for Pennsylvania by the Society of American Florists. He has accepted the position and will do all he can to further the aims of the S. A. F. Mr. Ludwig reports business brisk with him; this week he had something of novelty, it was the flower Nerine Fothergillia, scarlet and in bunches resembling the azalea but smaller in size; they took very well with the public and sold readily. Mr. John J. Murchi, of Sharon, was the grower of them.

In a letter from Holland to Mr. L. is mentioned the failure of Mr. P. Vos and from the tenor of it he will not likely be able to continue his business. Mr. Vos was here last spring and made many friends; he has a new narcissus that gave great promise of becoming avaluable addition in that line.

Mr. M. Rice, of M. Rice & Co., Philadelphia, was a visitor this week.

REGIA.

St. Paul.

FIRST KILLING FROST —TRADE IMPROVING DAILY —L. L. MAY & CO.'S NEW STORE — FIRE INSURANCE —VISITOR.

The first killing frost came the night of the 8th. Up to this date cannas, geraniums, coleus, verbenas, begonias, etc., were in full bloom and summer's floral beauties were blended in autumn's dying tints. The cold snap found most of the florists prepared for it, and the following day most of the tender stock outside was taken care of. The season has been a record breaker in more respects than one.

Trade is improving daily as the weather becomes cooler and society resumes its sway. Roses and carnations are now of good quality, with the supply about equal to the demand. Beauty, Bride and Perle are the best sellers at present. Chrysanthemums are beginning to show themselves in the store windows, the earliest arrivals being Bergmann and Montmort. Violets have also put in an appearance, being in bloom several weeks earlier than last year. There is a good sale also for palms, ferns and other ornamental plants. Shipping trade is exceptionally good, and some of the *wheat money* is at last finding its way to the florist's pocket.

L. L. May & Co. have moved into their new quarters on 6th and Minnesota streets. Their retail store fronts on 6th street, is 30 feet wide and 100 feet in length. This is two stories in height with a basement. Immediately back of this store is a conservatory 50 feet square. This contains a fountain and is well filled with choice palms, ferns, stove plants, orchids, etc., the benches being arranged in irregular forms giving a park-like appearance to the whole interior. An outside entrance to the conservatory is had on Minnesota street. The offices and wholesale department are located on Minnesota street in a four-story and basement building 100x30 feet. This building also joins the conservatory and is connected with it, both buildings with the conservatory forming an L and fronting on two streets. The office and shipping room are located on the first floor of the Minnesota street building. The second floor is the wholesale order room, the third floor the packet room, while the fourth floor and basement are used for stock rooms. The building, erected at a cost of $60,000, is adapted to all the needs of their business and is a strong and substantial edifice. Located in the heart of the retail district, the business should prosper. A large and commodious bevelled plate glass refrigerator adorns the retail store.

Apropos to the organization of a mutual fire insurance company, what rates are paid in the different cities, and do any of the brethren carry insurance on the contents of their houses? In this city board rates vary from $1.80 to $2.50 per $100 per year.

Dr. Schiffman, our orchid expert, has some very fine cattleyas now in bloom.

C. C. Pollworth, of Milwaukee, was a recent caller. FELIX.

Providence, R. I.

FAVORABLE OUTLOOK —BETTER FEELING EVERYWHERE —JACK FROST ARRIVES.— NEW STORES.— MR. RENNIE ILL —FINE CHRYSANTHEMUMS.—MRS. FISHER CARNATION.

The outlook for a prosperous season is better than a year ago. We all feel that the convention has awakened new interest in our city and it has been instrumental in creating a better feeling among our profession.

Jack Frost has paid his respects to about all the tender plants outside, and his mighty power has been felt to a great extent on many others. The S. A. F. badge at Roger Williams Park is, however, still intact and speaks pleasant memories of the convention.

Timothy O'Connor has moved to Westminster street, where he has a fine show window and a very commodious store in full dress. Wm. H. Wing has re-opened his store, foot of College Hill. Ed. J. Johnston makes a good display as usual, with his regular corps of attendants. In fact all the stores and show windows have an air of attractiveness.

A. M. Rennie has been confined to the house for several days. Fears are expressed that he may have over-exerted himself at the bowling contest, which caused hernia; we all hope to see him about soon.

F. Macrae has been cutting some fine chrysanthemums since the first cutting two weeks ago. Mac. always has nice 'mums "don't you know." Wm. Millar, of Rhode Island Greenhouses, is also bringing in market a nice lot of the early varieties.

Carnations are coming in in good quantity and quality, although the general complaint is that the plants from the field were not quite up to the standard. The Mrs. Fisher, a favorite here, seems to be deteriorating, and many are discarding it. It does fine with me and I am still in love with Mrs. Fisher.

Roses are plentiful just now and not much demand except for funeral work.

Mercury outside 66°, about right for a midsummer night. LITTLE RHODY.

PENSACOLA, FLA —W. F. Lewis is dead after an illness of three years with cancer. Mr. Lewis was well and favorably known in Cleveland, O., before his removal to Pensacola. He was for many years a member of the Society of American Florists until sickness forced him out of active life.

GERMANTOWN, PA.—The judges at the coming fall exhibition of the Germantown Hort. Society will be Messrs. Thos. Cartledge, Chester Davis and Wm. K. Harris.

PLANTS AT THE EXPOSITION.—AMONG LOCAL FLORISTS—PROSPECTS ENCOURAGING.—A. DONAGHUE, JR., MARRIED.—VISITORS.

Lists of plants to be used on the grounds of the Trans-Mississippi Exposition next spring were sent to the trade upon the 5th of October with a request for estimates; and while most of the trade sent in the estimates all are unsatisfied with the way the lists of plants were gotten up, also the amounts named, in all only 100,000, which they considered much too few.

Calling on J. W. and E. E. Arnold we found they had pulled out all their benching and are replacing it with new and reconstructing the entire interior of their range of glass. They had some very fine carnations to show and report business very good.

Lewis Henderson has a fine lot of 'mums just showing color, which promise a good crop of flowers. His roses look well and his business is improving. He has quite a unique window decoration, an old-fashioned mill being the principal subject in the foreground. Just what the mill produces we couldn't see, but Lewis probably expects to grind out business this winter.

Peterson Bros. report business fair for this season. Their 'mums look well and will be in in about ten days; their roses and carnations are coming in good.

Hess & Swoboda have added two new houses and repaired their entire plant. They have put in a new 60-horse-power boiler. 'Mums look well, just showing color. Business fair. Beauties very good color, and general stock improving.

Robert Unger has opened a store at 115 South 16th street. Mr. Unger has run the old Parker place for the past two years, and has a fine lot of 'mums just coming in. He is also cutting quite a quantity of good violets. He reports business opening up a little slow.

Donaghue is cutting some A1 Beauties, La France and Meteor. His roses give every promise of a first-rate crop this winter. Carnations are getting their color; 'mums very good and just coming in. He has just completed the rearrangement of his steam pipes, putting in larger mains, etc. Business with him is fair, but he expects it falrer when the fair comes. A. Donaghue, Jr., was married to Miss Katharina Damm, at Detroit, Mich., on September 22.

L. C. Chapin, of the firm of Chapin Bros., Lincoln, Neb., was in the city recently; also David Nicol, of Green & Nicol, Fremont, Neb. A. D.

Williamsport, Pa.

Messrs. Evenden Bros. have recently rebuilt and enlarged two of their carnation houses, making each 100x22. They have likewise overhauled their entire plant, having introduced many improvements throughout.

A general improvement in business is noticeable all along the line. Quite a few wedding decoration orders have been booked for the near future. Taken all in all the prospects never seemed brighter.

HOMO.

MUNCIE, IND.—The Muncie Floral Co. will open their cut flower store November 1 at 115 W. Adams street. Mr. B. F. Wilson will issue a seed catalogue the coming season. Mr. Geo. Miller has greatly improved his house and office by general repairs, painting, etc. Mr. G. Butterfield erected two houses this summer for vegetables.

CLUB MEETING.—CHRYSANTHEMUM SHOW MATTERS.—INVITATION TO THE TRADE.—PREMIUMS OFFERED.—A FIRE.—TRADE IMPROVING SLOWLY, BUT STEADILY.

The regular monthly meeting of the Florists' Club for October was held at Mr. Langstaff's residence. The attendance was very good and several new members were elected. The committee on state fair reported as stated in last correspondence. Mr. McKeand, city florist, exhibited some blooms of his excellent new cannas. Mr. Hatfield in his usual entertaining talk gave his experience with cannas for the past summer, fertilization, growth, etc. An appropriation was set apart to be used by the committee on entertainment during the chrysanthemum show. The following were appointed on that committee: Wm. G. Bertermann, E. A. Parker and F. B. Alley. These members will work in conjunction with the State Society committee. A bowling contest and an evening of unusual pleasure is promised our visitors during the show. The first week in November was selected for the show so as not to conflict with other shows and to give all our florist friends a chance to visit our show and our entertainment. This is the official invitation and everyone in the trade is invited; further particulars in next number.

After the meeting all present were invited to the dining room, where a spread had been prepared by Mrs. Langstaff and daughter. Miss Langstaff also sang, accompanied on the piano. She is a singer of local reputation. The evening was very much enjoyed by everyone present.

The chrysanthemum show outlook is very promising. The premium list is much larger than usual and more varied. The complete list and programme for the show will be out in a few days. Do not fail to send for one to the secretary, R. McKeand, Garfield Park, Indianapolis. Premiums for cut blooms are many and extensive; those for decorative plants are for good amounts, also for carnations and cut roses. This will be the 11th regular continuous annual show of the Indiana society, every following show better than the last as to quality and completeness. While no surplus is left and there is sometimes a shortage, we have always been fortunate enough not to have to make any assessments that count for much.

A fire in the boiler shed of Mrs. Chas. Rieman burned through the shed only, but ruined a lot of bulbs and one house of chrysanthemums, and also some plants in the smaller houses. Cause given is the gas pressure rising while the boys were absent from the place and the extreme dryness of everything. Loss about $400.

Mr. Anthony Wiegand is holding a special sale of palms and foliage plants at his place this week. His stock compares favorably with eastern stock; his latanias cannot be beat.

Mr. John Bertermann will very likely be appointed by the re-elected Mayor Taggart park commissioner. He is endorsed by the Florists' Club in a petition, also by his many friends throughout the city.

Trade is improving slowly, but there seems a certain stability in its course. 'Mums and carnations are coming in very fine and of good colors. W. B.

ASHTABULA, O.—M. E. Fassett, the florist, has made an assignment for the benefit of creditors. W. G. McCartney is named as assignee.

CHRYSANTHEMUM
CLUBS AND
EXHIBITIONS.

The season of Chrysanthemum Exhibitions being close at hand, we have, as in seasons past, placed ourselves in position to supply your Club with our beautiful **CHRYSANTHEMUM LITHOGRAPHS.** We have just issued, at a very great expense, two new lithographs (a full sheet and a half sheet), which we believe are the handsomest yet offered. They are entirely new in design, and, being highly illuminated are admirably fitted for advertising your coming exhibition.

We respectfully solicit your patronage, and will be pleased to send samples and prices on application. ☞ ORDERS WILL BE PROMPTLY FILLED.

THE COURIER LITHOGRAPHING COMPANY, Buffalo, N. Y.

AMERICAN PLATE

IS BETTER THAN FOREIGN.

JOHN LUCAS & Co., PHILA. & NEW YORK.

FLORISTS FERTILIZER

Made from **VIRGIN NIGHT SOIL** by steam process—**NOT Adulterated.** Complete Fertilizer. Soluble, quick in action. Combines all the Elements for Nutrition of Plants. Pleasant to handle.

1822 Filbert Street, PHILADELPHIA.

THE ANNUAL

CHRYSANTHEMUM NUMBER

OF THE

AMERICAN FLORIST

WILL BE ISSUED

November 13. Send advs. early.

Portland, Me.

Niles Nelson has now sixteen houses at South Portland. One new house, short-span-to-south 27x90 has just been planted with 2,000 Daybreak carnations. Daybreak is a good seller here and brings an advanced price. Carnations are looking well, considering the wet season. A pit of violets 11x90 with solid beds planted in June, is even span with two sash 3x6 hinged at the top, which are removed during summer and in early fall allow giving plenty of air by ventilating from either side. Marie Louise is the variety grown, with a few California for leaves to bunch them with. The first picking was sent to market on September 28 About 2,000 roses are grown here, also a quantity of chrysanthemums.

C. S. Goddard is growing his usual quantity of chrysanthemums and has a fine house of young roses. One house is devoted entirely to carnation seedlings. One white one, now in its second year, is very promising.

J. W. Minot & Son of Pleasantdale have a large plant. Roses, carnations and bedding stock are grown extensively and the houses are looking first-class.

W. A. Black at S. C. Dennett & Co's place has three promising looking houses of roses and carnations under his care.

At the funeral of Neal Dow, last week, there was an elaborate display of flowers. Most of the designs were furnished by J. A. Dirwanger who had all the family work.

Albert Dirwanger reports business very good. He probably does the largest funeral design business in Portland.

Major Davis of Deering is cutting fine chrysanthemums. H. W. D.

Corryville, O.

A. Sunderbruch's Sons have a capital carnation support in two half hoops of wire placed like croquet wickets with an eye on each side through which a string is run, making a very neat and effective support, it can be stowed away so easily. Carnations are fine, no signs of disease. The standard varieties look well but Queen of the West, Ruby and Cardinal are away ahead of all; they have strength and promise much, have been grown under glass all summer. In chrysanthemums Bergmann, H. L. Sunderbruch (about three feet tall and a splendid lot), Ermenilda, Bonnaffon, Queen and Ivory take the lead. By the time these varieties have run out roses will be in fine form. A batch of cyclamens is in fine shape for Xmas. V. M. C.

STONE RIDGE, N. Y.—H. P. Delafield has just completed three houses 24x100 and several extensive violet frames. All are of modern construction and heated by hot water. James M. Moore, a brother of M. J. Moore, of Highland, is in charge.

FLOWER POTS.

BAR HARBOR, ME.—The two small buildings known as the Rose and Lily and the little store adjoining are being demolished, and it is the intention of George B. Dorr to erect a commodious business building on the site, in which will be the rooms of the Mt. Desert Nurseries.

HUTCHINSON, KANS.—John Stamm has built one new house 40x100 ft. using red cedar material. He is just completing his heating arrangements.

Propagating Hardy Roses.

Please tell me how and when to make cuttings of hardy roses from outside stock, also from Hermosa and Clothilde Soupert.

Michigan. T. F. B.

It is now late to put in cuttings of hardy roses taken from outside stock; the middle of September would have been better. It is only a waste of time trying to root hard cuttings produced in the open air, in a greenhouse; the few attempts I have made along this line have resulted so badly that I would not be willing to spend five minutes on such work.

A great many hybrid roses are rooted in England in ordinary garden frames. In August the wood is considered in the best condition (about half ripe); the cuttings are made about 9 inches long and are put into the natural soil where they remain all winter with little or no attention. In the spring when the bursting of the buds indicates progress in rooting they are carefully lifted and either potted or transplanted elsewhere. The same method will not only answer well here, but is the best that I know of, only it is necessary for us to protect the frame on all sides to keep out the cold.

I would prefer to propagate Hermosa and Clothilde Soupert from growing wood, and in order to do this would pot up or plant on a bench a few good healthy specimens and grow them through the winter solely for cuttings; in fact I have much more faith in this kind of cutting and this method of propagating for all classes of roses; judging by my own experience I think there is much more satisfaction in rooting indoor grown wood not only at the time of rooting, but afterwards as long as the plants live.

ROB'T SIMPSON.

Kaiserin and La France.

F. C. C., Maine, wishes some pointers on "The winter care of Kaiserin and La France, same to be started into growth in February and planted outdoors for the summer." The matter would have been simplified had the inquiry stated the present condition and past treatment of the stock.

If the plants are in 3 or 4-inch pots and have been simply run along through the summer, they may be stored just as they are in a cool north house away from the sun and where the cold is not intense; a few degrees of frost will not harm them when dormant, but a temperature slightly above the freezing point is preferable. If a house of this kind is not at hand I would suggest making use of a well built and well drained cold frame, and would take the plants out of the pots, set them close together, and cover the balls with either earth, sand or ashes. The sash may be left off until cold weather, then put in place and covered, as well as the sides of the frame, with mats, hay or other material to keep out the extreme cold. When the time for starting them arrives they may be taken out, the roots divested of nearly all the old soil, be pruned back some, and potted into fresh rich soil. It is best to start them in a temperature not exceeding 48° to 50°.

In case the plants have been growing outdoors all summer and are large and strong it will be best to pot them at once and store in either of the above places; if they go into a frame it will be well to plunge the pots deep, beyond any danger of frost, not that a little frost would seriously injure them; the chief object in potting now and protecting from hard freezing is to encourage the roots to make a start while the wood continues dormant, a matter of considerable importance as will be seen when the plants are ultimately taken out, pruned and started up. Roses started into growth without any working roots are certain to break weak and what is worse exhaust themselves in an effort to sustain the young growth, whereas the sustenance should come up through the roots.

ROB'T SIMPSON.

Roses for Cemetery Planting.

From "A Beginner" comes the following: "Will you kindly tell me through the FLORIST the best six roses (hybrid perpetuals) for cemetery planting, say two whites, two pinks and two reds. I have a few orders for such for next spring and have not had much experience with this class of roses. The soil is light and sandy and I want something perfectly hardy and full double. I would also like a little information as to the best tree ferns for use on a shady lawn in summer and that will bear a low temperature in winter, say 45°."

It is a pity the soil is light and sandy, for that is not the texture conducive to the production of good roses or a long crop. The name applied to this large and beautiful class of roses is quite misleading; they are hardy it's true, but by no means "perpetual," and less so in this country than in Europe. Before planting, which is best done in the spring, your "light sandy soil" should receive a third of its bulk of cow manure. There is such a long list of fine roses it is difficult to

choose such a limited list as six, so I have mentioned twelve; the first six can be chosen if you please: Baron Bonstetten and Gen. Jacqueminot, crimson; Mrs. John Laing and John Hopper, rose or pink; Mme. Plantier and Coquette des Alpes, white. Then there is La Brilliante and Senator Valsse, crimson or deep red; Paul Neyron and Ulrich Brunner, pink; Mabel Morrison, a grand white flower, and Margaret Dickson, almost white.

The finest, hardiest and best of all tree ferns is Dicksonia antarctica. It is a native of New Zealand, and will do finely out of doors in summer. I have tried it here in Buffalo years ago, and it will thrive in a cool greenhouse in winter. In fact that is the place for it, as the writer had the care of a fine one some 40 years ago and it was in a cool house. By its side stood an equally fine plant of Cyathea dealbata, a magnificent tree fern, but far more expensive than the dicksonia, and I am doubtful if it's as easily handled. Alsophila australis is a quick-growing but trumpery useless tree fern, and if it goes to church once it dies.

WM. SCOTT.

Work of the Committees.

At the committee meetings on October 23, new chrysanthemums were passed upon as follows:

NEW YORK.—Miss Clara Nevin, exhibited by Wm. Hillebrecht, Union, N. J., Jap. Ref. white, scored 72 points. Peter Kay, exhibited by Robt. Laurie, Newport, R. I., Jap. amber yellow, scored 87 points. Solar Queen, exhibited by E. G. Hill & Co., Richmond, Ind., Jap. yellow, scored 86 points. H. W. Longfellow, exhibited by E. G. Hill & Co., Jap. Inc., scored 82 points. Australian Gold (an importation) exhibited by E. G. Hill & Co. Jap. light yellow, scored 91 points.

CHICAGO.—Mrs. O. P. Bassett, exhibited by Bassett & Washburn, Hinsdale, Ill., sport from Mrs. Henry Robinson, light yellow, scored 85 points. H. W. Longfellow, exhibited by E. G. Hill & Co., Jap. Inc. white; pink shadings on lower petals, scored 85 points. R. W. Emerson, exhibited by E. G. Hill & Co. Jap. white, shading to yellow at center, scored 80 points. Australian Gold, exhibited by Hill & Co. Jap. Inc. light yellow, scored 77. Solar Queen, by Hill & Co. light yellow, scored 88.

PHILADELPHIA.—No blooms presented.
BOSTON.—No report.
CINCINNATI.—No report.
ELMER D. SMITH, Sec'y.

Chrysanthemum Notes.

There were no chrysanthemums exhibited according to the requirements before the committee of the Chrysanthemum Society of America in the Quaker City last Saturday. It appears that probable novelties are not quite so plentiful this year as they were formerly.

An interesting exhibit was made, however, by George E. Campbell and John Welsh Young; the former had flowers of Mrs. J. T. Anthony and the latter half a dozen Glory of the Pacific. Most of the flowers were apparently identical. It would have been difficult to name them correctly, excepting by the foliage, and one flower of Mrs. Anthony was much darker than any of the others in both varieties. This, I understood Mr. Campbell to say, was the natural color a week or so ago, but the warm weather had caused them to fade out a great deal. The foliage was very distinct, the Mrs. Anthony appearing to be the better in this respect. Mr. Young stated that Glory of the Pacific was in bloom October 10 and the Mrs. J. T. Anthony five days later. The latter was sent out by Pitcher & Manda in 1893 and the former by Yoshiike in 1895. According to the judgment of Thomas Cartledge, the Glory of the Pacific is too light in color to suit their trade. A variety with more color would sell better, he said.

Mr. Wm. Paul Binder, gardener for Harry A. Pair, Esq., Baltimore, brought a few early seedlings for examination, though not under the auspices of the Chrysanthemum Society. A pale yellow was certainly a beauty, and one onlooker made the statement that had it been entered for a certificate it would score high. One thing the committee must keep in mind when judging early varieties is to compare them with what are already in commerce at the particular season of the year when they are exhibited. These seedlings (this is the first year) were ready to cut October 6th. One very delicate pink sort attracted some attention, but the same objection ruled in this case as in that of Glory of the Pacific. Another was a white one that was favorably commented upon, being much more graceful in form than the Madame Bergmann, and it is ready to cut at the same time. Another white was exceedingly fine, the flower being full of petals, large in size and graceful in form, but unfortunately it has a weak neck.

John McCleary, gardener for Wm. Weightman, Esq., Germantown, had some flowers of a large light purple. It has many good points, but the color was hardly lively enough to suit the fancy of any of those present. It is predicted that there will be many more new chrysanthemums to examine as the season advances.

In Mr. Battles' store were noticed the finest Mrs. E. G. Hill that have graced this town heretofore. Their superiority was in the stout erect stems, which generally is unusual in this variety. There was also a vase of grand blooms of Mrs. Henry Robinson on view, which brought forth much favorable comment. There are some complaints about this variety, I am sorry to say. It is inclined to drop its floret-petals too soon. Is there any remedy for this defect, or is it constitutional? PHIL. A. DELPHIA.

Tomato Disease on Forced Plants.

What are the chief causes, preventives and cure if any? We have planted on benches and are much troubled with the disease. We first cut off the worst leaves then we used Bordeaux mixture; it checked the disease but checked the plants worse. On other plants we used sulphur freely and well; this did not injure the plants and checked the disease, but still the disease is spreading slowly but surely over the whole plant. What can we do to stay the evil? The plants were grown "hard as iron" and now have plenty of air on fine days and a little ventilation at night with heat turned on to 60°.

HARNISH.

Although as a rule tomatoes do not suffer much from disease under glass, yet when they do become infected it is difficult to stay the disease on account of the

ONE OF THE NEW PONDS OF AQUATICS IN HUMBOLDT PARK, CHICAGO.

softness of the tissues of the plant and its tender hairy surface. There is more than one serious tomato disease, each requiring its special treatment. Although the writer does not give a word of description, it is fairly safe to assume that his plants are suffering from brown mold (*Cladosporium fulvum*), and if so his method of treatment is the correct one.

Remove and destroy (burn) the worst leaves, and also all fallen leaves, for the mold grows on dead tissues even better than on live ones. Keep the temperature as low and the air as dry as the health of the plant will permit, by ventilation, etc. Use sulphur, preferably by painting the heating pipes. Spray with a copper solution.

The ammoniacal carbonate of copper has been used successfully by a number of experiment stations. It is made by diluting one volume of strong ammonia with seven or eight volumes of water, and stirring into it carbonate of copper, a little at a time, until considerable powder remains undissolved. After standing some time with occasional shaking, the clear liquid is turned off and used for spraying. The undissolved part can be used to make the next lot. This solution should be made and kept in wooden, earthen ware or glass vessels.

This treatment may not stop the disease, although it cannot fail to do much toward checking it. At the next opportunity to clear the greenhouse, it should be thoroughly disinfected by removing the soil, then burning sulphur after making the interior thoroughly damp in every part. Repainting would be a good thing. Then use soil from an uninfected source. It is a disease to be prevented, rather than to be cured. J. C. ARTHUR.

Purdue University, Lafayette, Ind.

The Sow Bug.

So much has been asked and answered as to the destruction by traps, poisons and otherwise of this innocent isopod that it has interested me to know if any observer has actually found this bug eating green plants of any kind. They are about our place by the ten thousand, feeding among dry, decaying substances, as strawy manure, leaves of any kind, wood chips and the like. We notice them in the houses among any collection of dried leaves, or even papers, beginning to decay; in fact they are so shy it is their habit to feed hidden away among such substances, but I have never observed them running over plants or feeding on the live substances, nor can I name a single indication of hurting any of the various plants we grow. If, however, we can not prove them destructive to our plants, they are not pleasant to have about in the houses, and so may urge us to keep the place cleaned up from such refuse material that invites them.

Lancaster, Pa. DANIEL K. HERR.

Objectionable Grasses in Lawns.

Please tell me through the FLORIST the names of the grasses of which I send specimens. Our lawns are covered with the small grass. Is there any way to kill it? G. W.

The larger grass which you send is Muhlenbergia sylvatica and the small species is Muhlenbergia diffusa (Dropseed—Nimble Will). The muhlenbergias are enabled by their root structure and scaly runners to endure drought better than the more succulent grasses hence M. diffusa usually prevails in dry orchards and among trees where, from shade or root absorption the moisture is too scant for the poas and other soft grasses. In pastures this grass is not quite as bad as some of the other "weed" grasses, because it has some nutritive value, just how much there is considerable difference of opinion.

As regards a remedy for M. diffusa in lawns, usually it does not prefer open ground and if found in the open it is probably because some unfavorable conditions hindered the starting of the softer grasses in the early part of the season. To favor these in the spring by plenty of moisture and perhaps a little enrichment of the soil, as a dressing of bone-meal or other fertilizer, will doubtless help your lawns.

Muhlenbergia sylvatica is most at home in rocky shades, and ranges from New York to Illinois. None of the grasses of this genus (formerly placed in agrostis) seem to thrive in good rich soil. J. H.

A New Cypripedium.

The collection of orchids at Kimball's greenhouses, Rochester, is especially rich in cypripediums. Mr. Geo. Savage, the able superintendent, is particularly fond of them, and no new hybrid of any value escapes his watchful eye. A large number of pedigree seedlings of all sizes are watched daily with untiring and careful interest. Quite a number of them have bloomed and some of these show marked improvements over similar hybrids of recent introduction, but lately when the flower of a particular favorite opened out he found himself the possessor of the best cypripedium ever raised in this or any other country, and his joy knew no bounds.

Druryi × villosum is the parentage and

it is a real beauty. No other cypripedium can compare with it in richness of color. Hitherto the objection to the vast number of this interesting family was the absence of decided colors, but here we have a combination of creamy white, magenta and yellow equal to the splender of a cattleya. The flower is borne on a good stiff and tall stem; in size it is very large with a broad well-formed dorsal sepal, which is shaded yellow distinctly front and back; petals of extra width are thickly covered with minute deep-colored dots, and the pouch is well formed and of bright color. No matter how the flower is turned the rich coloring shows distinctly, even from the back no dull or uncertain tints are visible. A sensation is awaiting the orchid fanciers, and Mr. Savage is justly proud of his pet, more so than of any former acquisition, including the spotless C. Insigne Laura Kimball, which is the only pure yellow insigne, and which never shows any traces of spots in the dorsal.

K.

Florists' Mutual Fire Insurance Association.

The committee appointed by the Society of American Florists to prepare a plan of a mutual fire insurance company met at the Imperial Hotel in New York City on Monday and Tuesday, October 18 and 19. The members of the committee present were M. A. Patten, Tewkesbury, Mass.; E. H. Michel, St. Louis, Mo.; John G. Esler, Saddle River, N. J. and myself. Mr. Seidewitz of Annapolis, Md., was necessarily detained at home. The committee organized by electing Mr. Michel, President and myself as Secretary of the committee. A set of by-laws was prepared by the committee to be submitted to the members of the new association when formed. The by-laws provide in substance as follows: That the name of the Association should be The Florists' Mutual Fire Insurance Association; that its officers should be a president, vice-president, secretary, treasurer and a board of fifteen directors; that the members of the association should elect the directors and the secretary, and the directors elect the other officers. The various duties of the officers are provided for and do not essentially differ from the by-laws of similar associations. Article V. of the by-laws contains the important parts thereof, and is as follows:

INSURANCE POLICIES.

Sec. 1. Policies of insurance will be issued by this association insuring its members against loss by fire and lightning

Sec. 2. Such policies will be written only upon property owned by the insured, and used by him in the growing of plants under glass, and his sheds, stables, barns and dwellings used in connection therewith.

Sec. 3. For the purpose of fixing the rates to be charged for such insurance the following classification of greenhouses is adopted.

CLASSIFICATION.

Class 1. Greenhouses in good condition, heated by hot water or steam, or both, where boilers, flues and pipes are properly insulated with water under pressure on the premises and being within the limits of the city or other corporation having a paid fire department. The insured to keep a watchman on the premises whenever they are heated.

Class 2. Add for no watchman twenty-five per cent. to rate of premium.

Class 3. Add for no paid fire department twenty-five per cent. to rate of premium.

Class 4. Add for no water under pressure twenty-five per cent. to rate of premium.

Class 5. Houses heated by flues to be excluded from insurance.

Kindling wood or other inflammable material in contact with flues, boilers or steam pipes or iron flues in contact with wood work of any description, to cancel obligation of company in case of loss.

Sec. 4. For the same purpose the following classification of barns, stables, sheds and dwellings is adopted.

Class A. All brick buildings with slate or metal roofs.

Class B. All brick buildings with shingle roof.

Class C. All frame buildings with no exposure to other buildings within 50 feet.

Class D. All other buildings.

Sec. 5. The rate of insurance to be charged for all policy holders for the first year they are insured, shall be as follows:

On Dwellings and out buildings.

Class A.	.35
Class B.	.40
Class C.	.50
Class D.	.75

On greenhouses and attached sheds the first year $1.00 upon each $100 on each policy of which the sum 25 per cent. shall be carried to a reserve fund. After the first year such proportionate rate shall be charged as will produce sufficient moneys for the expenses, losses and carry 25 per cent. of the total income to a reserve fund. Should the amount of premium so charged be not sufficient to pay the losses and expenses of the association the board of directors may at any time assess upon the policy holders an assessment not exceeding a full year's rate as fixed for the first year. Before the directors shall make an assessment on its members for alleged loses, the president and a majority of the directors shall make a statement, verified by their oaths, exhibiting the amount and nature of the losses sustained of cash means and premium notes on hand, and the gross amount of the assessment proposed to be levied. Such assessment shall be payable within 30 days from the time a notice thereof is mailed by the secretary to the policy holder addressed to the address stated in the application for the insursance.

Sec. 6. Before any policy shall be issued the applicant for insurance shall file with the secretary a written application duly signed, giving a full description of the property upon which insurance is desired, with such other information as may be required by the blank application submitted for that purpose, or by the officer of the association, which application shall among other things state that the facts therein stated are true, and that the contract shall be void if they are false.

Sec. 7. Blank applications will be forwarded all florists desiring the same. They shall then be filled out by the applicant, signed and forwarded to the secretary.

Sec. 8. Upon the receipt of the application the secretary shall at once examine the same and if the application is approved at once notify the applicant of the amount required to pay one advanced assessment on such application. Upon receipt of such advanced assessment a policy of insurance shall at once be prepared and forwarded to the applicant, which insurance shall be in force as soon as the policy is deposited in the mail by the secretary.

Sec. 9. The president, treasurer and secretary shall constitute a rate committee to whom the secretary shall refer all doubtful applications before approving the same. Said committee shall also fix rates upon all risks either less or more hazardous than those especially described in these by-laws.

Sec. 10. All policies issued by the association shall be upon a form adopted by the board of directors and shall insure the assured against loss by fire or lightning for a period of seven years from the date thereof unless sooner terminated under these by-laws or the terms of the policy. After the expiration of said seven years said policy may be renewed for a like period by endorsement thereon by the secretary.

Sec. 11. Each policy issued for a period of seven years shall be subject to an assessment at such time or times as the needs of the association require as herein provided. As soon as an assessment is levied the secretary shall at once notify by mail all persons liable to pay the same stating the amount of the assessment; such assessment shall thereupon be payable within 30 days from the mailing of such notice. Should such assessment not be paid within 30 days by any person his policy shall thereby be suspended and while such assessment so remains unpaid the association shall not be liable thereon. If said assessment is paid after 30 days and within 90 days the same shall be reinstated without liability on the part of the association for the time the same remained due and unpaid. If said assessment remains unpaid for a period of 90 days from the mailing of such notice, said policy shall stand forfeited and cannot be reinstated but a new policy may be issued.

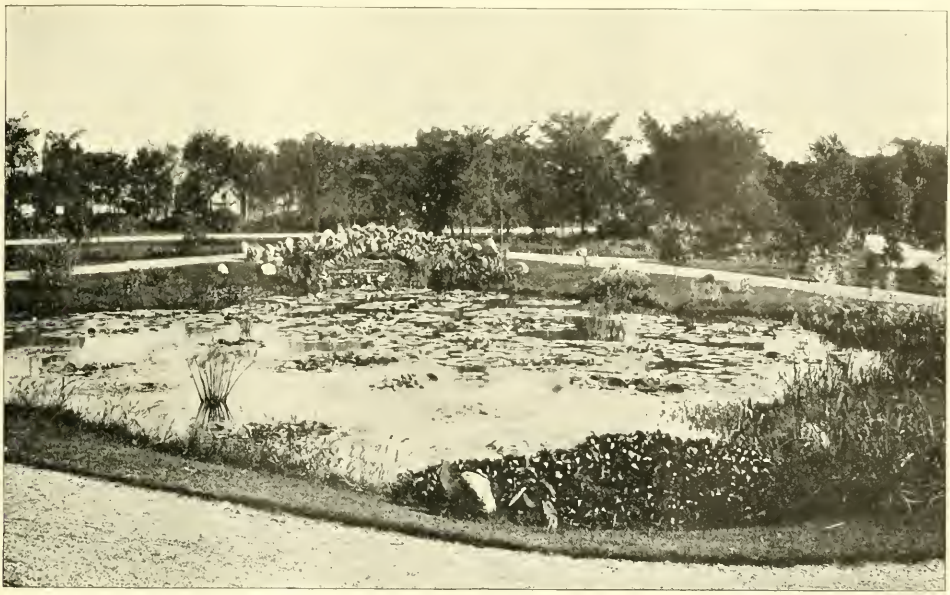
Sec. 12. No more than $5 000 of insurance shall be taken upon any building or buildings not entirely detached from each other.

Sec. 13. No member of this association shall incur any obligation to any other member by becoming a member herein or insuring herein, except for the payment of assessments levied while he is a member.

You will note by this that the committee concluded to not issue any policies exceeding $5,000 upon any single block of buildings. At first the committee disagreed upon this proposition. Some urged that it was as safe to take larger insurance upon larger plants, as it was to take small risks upon smaller plants, but the danger of ruining the association in its early days finally induced all to agree that at least for the first year no policy should be issued for a larger sum. At the outset there was a difference between the members of the committee upon the question of insuring the contents of greenhouses, but after much discussion it was decided to not recommend the insuring of contents until the association had at least one year's experience. It will be remembered that this committee had no power to adopt by-laws, but simply to formulate the same and lay them before the general meeting when called. It is hoped by the members of the committee that those interested will not hesitate to discuss the questions presented by these by-laws, either by personal correspondence with the members of the committee or through the trade papers.

After formulating the by-laws the committee concluded to prepare a form of application of insurance to have circulated among those desiring to become members with a view of having them filled out at as early a day as possible, and to ask that the applications be accompanied by the sum of $1 per thousand or 10 cents per hundred. If this is done the applications can be classed and the rates fixed, and the association be in a position to do business at once after the general meeting referred to.

Everybody will at once understand that the association can not commence doing business until it has in hand a large number of applications, and is able to issue a large number of policies at the same time. The committee now has informal applications by letter for about $700,000 of insurance and if the florists respond promptly there will be no difficulty in reaching the million mark by the time we are ready for business, which we hope will be about the first of December. The rate fixed for the first year is believed to be much higher than will be required in the future, but it would be a mistake to start with too low a rate.



Ft. Wayne, Ind. W. J. VESEY.

Black Asphaltum on Heating Pipes.

I would like to know through the columns of the FLORIST if the common black asphaltum used for painting steam and hot water pipes, castings, etc., is injurious to plants when applied to hot water pipes in a greenhouse. T. B. S.

The material mentioned, if applied to pipes in a house where plants are growing, would certainly be injurious to them. I have seen plants injured from the fumes of this material months after it was put on the pipes, and in another case I saw this paint applied during the very hot weather in summer when the greenhouse was quite empty of plants which enabled the paint to get thoroughly dry and hard before any fire heat was applied, or any plants put into the greenhouse, and in this case there was never any apparent damage done to the plants when put in the house or afterwards; but there might have been considerable diffcrence in the composition of the two lots of asphaltum paint. I certainly should not like to use it myself, as anything with any composition of tar in any form applied to heating pipes is certainly more or less injurious to plant life.

If T. B. S. objects to rusty pipes and wishes to paint them black, a very cheap and effective black paint for the purpose can be made by taking lampblack and

ONE OF THE NEW PONDS OF AQUATICS IN HUMBOLDT PARK, CHICAGO.

good linseed oil; when thoroughly mixed add one pound of Japan black ground in oil to every six pounds of the above; keep it well stirred while applying to the pipes, and if allowed to dry gradually (i. e. do not heat the pipes over 75° till the paint is set quite hard) he will have a nice clear black paint that will stand on his pipes for years unless they are laying on damp ground or under drips, etc.

There may be other paints equally as cheap as the above and equally good, but I have found the above very cheap, easily made by any ordinary workman, easily applied and without any injurious effects whatever to plant life. JOHN N. MAY.

Heating Notes.

As the season of steady firing is now upon us, a few seasonable suggestions relative to this important detail of greenhouse work may not be out of place. It would be good policy to thoroughly examine the smoke pipes, flues and chimneys and satisfy yourself that all are in perfect condition, for nothing is more annoying and oftentimes the cause of much trouble and unnecessary expense than, just as the really cold weather sets in and steady, sharp firing is necessary, to have a smoke pipe give out, or find that the draught has become sluggish through defects in chimney or flue.

The smoke pipe connecting your boiler to the chimney should be taken down and cleaned out and carefully looked over to see that no part is very much rusted, for when the gases from the fire strike such spots they soon spread, which causes the pipe to ultimately collapse. In replacing the smoke pipe, cement any openings which may exist at its junction with the boiler, also fill up with mortar or cement any space left between the pipe and brickwork, where it enters the chimney.

In cases where the chimney is built with single brick walls only, which, though very bad practice, is unfortunately a very common occurrence, be careful to have all joints between bricks well jointed up with cement and see that the cleaning out door or hole at bottom of the chimney is closed tight. It would also be well to satisfy yourself that there is a clear air space of not less than three inches between the outside of the chimney and any surrounding wood work. A galvanized iron flue or smoke pipe should be at least nine inches clear from any wood work, and even then it would be well to protect the wood with a sheet of tin hung about one and a half inches away.

The grates also require attention at this season and if any are found much burnt, or even slightly bent or twisted, new ones should be procured and kept on hand in readiness for prompt insertion when needed; it is an expensive and careless policy to wait till the old grates allow the fire to fall out before thinking of new ones.

A set of grates of good design and proportions should last from one to three years, yet I have known of many instances where they did not last two months, and the makers consequently received considerable criticism and oftimes abuse for using "bad iron," whereas the cause in 95% of such cases is not "bad iron," but "bad management" or carelessness on the part of the man tending the fires. It is possible to burn out, or melt a set of grates in one night, the requisite conditions being an ash-pit full of hot ashes, a strong fire and fire door thrown suddenly wide open; with these conditions you may look for molten grate bars in about thirty minutes. I cannot, therefore, impress too strongly upon those having charge of the firing, to see that the ash-pits are cleared free from ashes at least once daily.

HENRY W. GIBBONS.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Dahlia Notes.

STORAGE.

When removed from the ground dahlia tubers become very susceptible to atmospheric influences. If kept in too dry a place they shrivel and eventually lose all vitality long before it is time to return them to the ground. Excessive moisture is equally fatal, developing rot and bringing woe to the grower's soul when he finds his much prized bulbs a mass of decay. The slightest touch of frost is disastrous and I am very strongly inclined to believe that a temperature of three or four degrees above the freezing point is mischievous. A suitable temperature and a proper amount of humidity in the surrounding air are therefore to be sought, and if these conditions are supplied there is little loss during the winter.

The second condition is the difficult one to satisfy, so that upon this practically depends the whole matter. Some cellars will keep the roots perfectly while others are just as certain to cause loss. If kept in a greenhouse, as is often done, the buds will start and make growth too early in the season. It not unfrequently happens that those stored on shelves near the bottom of a cellar will rot, while those stored on upper shelves will at the same time dry and shrivel. They have been known to decay placed loosely on a cellar bottom while others, placed in a box raised eight or ten inches from the ground, have kept perfectly.

The one plan which seems to meet all conditions most fully, is to surround carefully with dry earth. This can be easily done by packing the roots closely in a box or barrel and then shoveling dry earth, the drier the better, on top. By shaking and jarring the earth can be made to penetrate into all the unfilled space, practically excluding the air and securing uniformity of temperature and moisture. Thus protected they have been

known to keep in good condition from the middle of September until the first of the following July and come out in good condition with well-formed sprouts. Even thus tender varieties will sometimes succumb to adverse influences but the great majority will pass through the winter in perfect condition. H. F. BURT.

Boston.

A DEPRESSING CONGESTION IN THE CUT FLOWER TRADE —VISIT TO A CHRYSANTHEMUM "FARM."—A NEW VENTILATOR. —EXHIBITION PROSPECTS.

Boston is experiencing one of the most depressing periods in the history of its cut flower trade. This is especially so as seen by those who judge the flower business of today by old standards. The continued warm, bright weather is in part responsible for the tremendous overstock of all kinds of flowers seen on all sides, and colder temperature, cloudy skies and wintry winds will in the course of time do their part to relieve the burden. But it is not difficult to see that the present condition is also due to broad tendencies of the trade that are beyond the control of either man or weather and that the wise man will endeavor to adjust himself to the new order of things rather than to fool himself with any hope of a return of old conditions. The equipment that afforded a grower a good living a few years ago is no longer adequate and this is more plainly evident each succeeding year. Each individual will have to decide for himself whether the present or the future present encouragement sufficient for him with his present investment to continue as heretofore and it requires no demonstration other than what one sees in and about the flower marts to show that the question will prove a knotty one for some of the smaller growers. It is true that the increase in commercial glass in the immediate vicinity of Boston has been proportionately much less than in some other sections of the country and hence the local surplus is not so unwieldy but the overproduction in other places has driven quantities of their product here in search of a better market and congestion quickly follows, with its unavoidable consequences.

A very pleasant afternoon was spent last Saturday by a party of gentlemen from Boston and vicinity at the greenhouses of E. N. Pierce & Sons at Waltham. Mr. Pierce was, until a few years ago, in market gardening exclusively but low prices in that line forced him, as well as many others, to find some more remunerative use for his greenhouses. Up to date chrysanthemums have been his fall specialty and Easter lilies his spring crop. In the winter the houses are devoted to beets and in the summer to cucumbers, so they are never idle. The place is quite extensive some of the houses being "sash houses" and others of modern pattern with large glass, etc. One of the latter was built this season, 24x185. One of the younger Messrs. Pierce has designed a greenhouse ventilator and just secured a patent on it. It is a simple and very powerful device and impressed the visitors as being decidedly an improvement over anything in this line yet offered. The industry and mechanical ingenuity of the younger members of the firm are shown by the fact that the building and equipment of the houses have been exclusively home work. There are large quantities of carnations, mignonette and chrysanthemums. Of the latter the cut for the past week has averaged over one hundred dozen a day. Bergmanns are all cut and Gold Lode and Ivory are now going. Of Ivory there are two enormous houses seemingly enough to supply the entire Boston trade. After the establishment had been inspected the visitors were escorted to the work room where a lunch was spread out and a pleasant social hour was spent in which the various members of the party took part, each in his own specialty of oratory, song, story or dance. Col. Pierce, a brother of Mr. E. N. Pierce proved to be a vaudeville star of the first magnitude and has already been spoken for as a drawing card at future Florist Club meetings.

The Boston chrysanthemum exhibition will open on Tuesday, November 2, and continue four days. If equal to its predecessors, and of this there is no doubt, it will pay chrysanthemum admirers from other states to come and see the products of the horticultural skill of their Boston brethren and they will be gladly welcomed. In fact the date of this show was purposely fixed so as to conflict as little as possible with the time of exhibitions elsewhere and it is hoped that the opportunity will be taken advantage of. There were a few very fine blooms at the Hall on Saturday, 22d, from W. N. Craig and H. A. Wheeler.

Visitors in town: Samuel Henshaw, New York; J. R. Fotheringham, Tarrytown, N. Y.; Walter Mott, Philadelphia.

New York.

MARKET DEMORALIZED —CAUSES —FLOWERS IN MARKET.—AMERICAN INSTITUTE SHOW.—PRIZES.—SEEDLING CYPRIPEDIUM. —DEATH OF J N HAUSER.

The cut flower market continues in an unprecedentedly demoralized condition. Various contributary causes are responsible—the tearing up of the fashionable residential streets for pipe laying, etc., the warm weather and the most exciting election contest of the present generation —and all are impatiently looking forward in hopes of seeing some indication of an improvement, but without much success as yet. Violets have improved wonderfully and there are now offered quantities of them in best grades. Fine cattleyas are seen frequently and there are a few Roman hyacinths and white narcissi already on deck. Roses are discouragingly heaped up and chrysanthemums overwhelm everything else. Carnations do not seem to be over-abundant but there is no special activity in the demand for them.

The display of chrysanthemums at the American Institute show, this week, is fine and many of the blooms shown are superb. A. Herrington, gardener to H. McK. Twombly is one of the largest exhibitors. He took first prize on vase of whites (Mrs. Robinson) vase of yellows, (Bonnaffon), on three varieties six of each, and five varieties six of each and also staged a group of orchids and ferns that attracted much attention. Dailledouze Bros., Ernst Asmus, J. N. May, E. G. Hill & Co. and Wm. Duckham, gardener to D. W. James, all contributed grand specimen blooms, the latter taking first prize for twelve Japanese. Geo. H. Hale, gardener to J. E. Brown was awarded a special prize for twelve Japanese, and Robert Laurie, gardener to C. Vanderbilt took high honors for a yellow seedling of exceptional merit named Peter Kay. A first-class certificate was given to George Savage, gardener to Mrs. W. S. Kimball, for a beautiful flower of seedling Cypripedium "Anna Savage," a cross between C. Curtisii and C. Chas. Canham. M. J. Moore got a diploma for an astonishing bunch of violets. Dailledouze Bros. and H. Weber & Son were represented by good displays of carnations. The stage was effectively massed with foliage plants from Julius Roehrs.

J. N. Hauser, one of New York's oldest and most respected florists, died on Sunday, 24th inst. after a long and painful illness, at the advanced age of ninety-one years.

A. Dimmock of Sander & Co. has gone on an extended western business trip.

Chas. Thorley has returned from his European trip.

In town, H. G. Eyres, Albany; H. G. Faust, Philadelphia.

Buffalo.

'MUMS IN QUANTITY —NOT YET AN OVERSUPPLY —IVORY AT THE HEAD —CARNATION FLORA HILL.—FINE BEAUTIES — GOOD VIOLETS —NO STARTLING NEWS — EARLY CHRYSANTHEMUM SHOWS.—SOME VERSES.

The smoke has disappeared because some rain fell and put the fires out and lovely autumn weather has prevailed. The queen of this season is here in quantity but I have not yet heard of an oversupply. True there has been no accident reported from people fighting with each other to gain access to the counters where these showy flowers are sold, but unless some people who grow more flowers than they can profitably dispose of send them in by the cord and swamp us, we have nothing to complain of.

It's always pleasant to say a good word about anybody or anything, and as there are so many good people and such good and beautiful flowers I must not be thought a flatterer if I say again that preeminent above all chrysanthemums stands one and that is Ivory. If W. K. Harris missed twenty-five straight he would be forgiven for he has immortalized himself as Burns did when he wrote the "Cotters' Saturday Night," by raising and giving to the world Ivory. I see in the Philadelphia notes that the Pink Ivory is now producing white flowers. Why not? It is only a sport and sports till fixed by years would naturally revert back to the type from whence they came. Note the features on some of the human family and see how closely they resemble our remote ancestors. But this is a large subject and we will revert to carnations which are now assuming their winter form or better.

I was glad to see what an excellent grower and lifter that fine white carnation Flora Hill is. It promises to be as good as the flowers led us to hope that were so beautiful at Cincinnati, and is about as little troubled with rust as you would expect from one of those establishments where all are "free of rust."

I can say little about roses just now, only those grown by those who profess to grow them locally as well as imported stock are fine. If there is an exception worth noting it is the excellence of the Am. Beauties cut by W. J. Palmer & Son, and they have more to come, so they say. You ought to see the violets that are grown here. The individual flowers will cover the usual space and the leaves resemble those of a Brussells Sprout when not over vigorous. The above description is somewhat ambiguous to the uninitiated, but they are really fine and if the demand is as good as the violets our slumber will be sweet.

Nobody in the business has died this week or committed any "criminal crime," nor has a drummer made our life weary, so there is nothing startling to relate ex-

cept a little effusion of the muse, which if your gentle readers will allow it would be a pleasure to indite. It was so pleasant this week to see a few lines in your columns from the pen of that absolutely correct man in all respects, one who can pen the most pleasing tale of truth, of science, art or literature, but whose modesty subordinates his brilliancy. The writer of the few lines quoted below was, I believe the first to hold a chrysanthemum show on his own individual efforts and I must truthfully say that it was a far better and more pleasing show than the one held over a cellar two years later by the great city of New York presided over by "Uncle John" and chiefly remembered from the awful gusts of wind that came up through the plank floor and the terrible cockney accent of the young man who peddled flowers on a board near the entrance of the tent, which in external appearance much resembled one of "4 paws" side shows. But fancy putting a show held entirely by "one man effort" in a small city by the wide and shallow Allegheny River against the metropolis. Mr. Bell says in a letter to me a few years ago: "In clearing up a shed the other day my boys came across a dodger that I had issued with my chrysanthemum show in 1887, and the lines may suit your omniverous appetite." As I have had these lines some years they are growing riper all the time and now I think 'tis time to give their aroma to my friends.

Of all the flowers that blow between the snow and snow.
The Trillium, the Lilium, the Leucanthemum,
There are none in all the row that make so great a show
As that lingering flower of autumn the chrysanthemum.

The violet and the rose are sweeter I suppose,
And more modest is the pink mesembryanthemum,
But for eyes as well as nose and to please the maids and beaus
There is nothing like the gorgeous gay chrysanthemum.

While on this sort of thing, and it is very well for those that like that sort of thing, I want to quote a few lines that were inclosed with the gift of a meerschaum pipe to a good friend. The author you must guess, and he wrote it in three minutes by the watch, October 24, 1897.

When troubles large and small appear,
Don't turn to whisky or to beer,
But puff away at your old pipe,
Soon troubles will be thin as light.

When color on its cheeks assume
That richness which is age's bloom,
You'll find its flavor much increases
As wit with age our end it reaches.

W. S.

Chicago.

TRADE SOMEWHAT SLOWER.—NO CALL FOR INFERIOR STOCK.—CARNATIONS GO SLOWLY.—CHRYSANTHEMUM CONDITIONS.—ST. LOUIS BOWLERS VISIT CHICAGO.—CHICAGO WINS.—THE SCORES.—CLUB MEETING.—CHRYSANTHEMUM DISCUSSION.—PROGRAM FOR WINTER.—ANNUAL ELECTION.—ANNUAL SUPPER NOV. 11.—THE CHRYSANTHEMUM SHOW.

Trade appears somewhat slower than last reported, with prices remaining practically the same. There seems to be a fair demand for No. 1 stock, but no call whatever for the great amount of inferior quality. Carnations are very plentiful and meet with slow demand. Prices range from 75 cents to $1 for average quality, fancies selling for $1.50. Chrysanthemums are now getting to be at their best. The demand for this flower is not as brisk as last season, and prices are also less. The Illinois Cut Flower Co. handle very fine blooms, their best sellers being Bonnaffon and Ivory, the latter in both pink and white forms.

The visit of the St. Louis Bowling Club's team to this city was a decided "event" in local trade circles, and the Chicago talent did their best to make the visit a pleasant one. It is true that Chicago won in the match of five games, but aside from the result of the bowling no complaint from the St. Louis boys was heard. The party included Messrs. E. Kuehn, J. J. Beneke, J. W. Kunz, A. Bauer, Emil Schray, Chas. Beyer and Mr. Weber, Jr. They were met at the train by a committee from the Chicago club and at once taken to breakfast, after which a walk was taken around the city, looking into the Auditorium Hotel, Masonic Temple, etc., and calling upon retail and wholesale florists that were most conveniently reached. The Kinsley alleys had been selected for the games, and this point was reached so as to start the games promptly at 1 o'clock. The alleys are undoubtedly the best in the city. They are regulation alleys, and the pair used were constructed especially for match games. They were in prime condition and were as true as alleys can be made. A lunch was served on tables at the side of the alleys and abundant liquid refreshment was provided. Everything passed off very pleasantly and nothing happened to mar the pleasure of the occasion. Five games were played and Chicago won by 581 pins, having a total of 3,979 pins against 3,398 by St. Louis. In individual totals J. S. Wilson was first with 725, John Zeck second with 718, G. L. Grant third with 696. In single game scores G. L. Grant was first with 181, Chas. Beyer second with 179, John Zeck third with 165. Following is the score in detail:

CHICAGO.

	1st game.	2d.	3d.	4th.	5th.	totals
J. S. Wilson	156	151	137	132	149	725
G. L. Grant	120	144	181	135	116	696
P. J. Hauswirth	115	115	118	109	152	609
John Zeck	155	146	165	118	134	718
C. W. McKellar	119	119	146	114	120	618
Chas. Reid	123	103	159	91	137	613
Totals	768	778	906	699	828	3979

ST. LOUIS.

	1st game.	2d.	3d.	4th.	5th.	totals
Chas. Kuehn	125	140	122	101	95	583
J. W. Kunz	133	98	122	118	153	624
A. Bauer	81	107	86	115	81	470
E. Schray	113	102	114	123	109	561
J. J. Beneke	99	119	125	151	115	609
Chas. Beyer	179	133	92	96	151	651
Totals	730	699	661	704	704	3398

After the games were concluded the visitors were dined and then taken to the theatre, after which they were placed safely on their train, which left at 11:30 p. m. Both guests and hosts enjoyed the sport hugely and there is talk of a return visit by the Chicago bowlers to their St. Louis friends.

The Florist Club meeting last Thursday evening was very well attended, and those present were well repaid for coming. The feature of the meeting was a most practical paper on chrysanthemum culture by Mr. G. Stollery, which will appear next week. It was very fully discussed by the members, particularly the statement that a large number of flowers were cut and sent to this market before the flowers were fully developed, and that this resulted in loss to the grower and dissatisfaction to the buyer. The discussion widened to include other flowers and the difference in value between flowers that were cut right and those that were not was strongly emphasized. The subject seemed so large that it was referred to the committee on program who will undoubtedly provide for discussion of the various phases of the matter at future meetings. That committee had already reported the following program for the winter:

Nov. 11. (Show week). No provision as on this date the annual supper takes place.

Nov. 25. Call to resident florists to become members of the club.

Dec. 8. Fumigation versus liquid insecticides.

Dec. 22. (Christmas week). Nothing provided.

Jan. 13. Ladies' night.

Jan. 27. Pot plants for market.

Feb. 11. Retailers' night.

Feb. 25. So near Carnation convention nothing provided.

Mch. 12. Roses and violets.

Mch. 26. Lilies and other bulbs.

Apr. 9. Private gardeners' night.

Apr. 23. Bedding plants.

May 6. Palms, ferns and other ornamental plants.

May 20. Sweet peas and plants for summer blooming.

The committee will arrange with one or more members to open discussion on these subjects on the dates indicated.

The annual election of officers resulted as follows: G. L. Grant, president; E. Wienhoeber, vice-president; T. F. Keenan, recording secretary; C. W. McKellar, financial secretary; W. W. Barnard, treasurer. Trustees: P. N. Neiglick, C. W. Johnson, Edgar Sanders, John Reardon, J. S. Wilson.

A committee was appointed to arrange for the annual supper which will take place Thursday evening, November 11.

In addition to reading his paper Mr. G. Stollery displayed at the meeting three magnificent blooms of chrysanthemum Mrs. A. J. Drexel. W. N. Rudd showed some splendid blooms of Chebeaque, pink; Defender, red; Ivory (grandly done); Evangeline, Mr. May's new white, and it showed up very much better than at the C. S. A. committee meeting last year; as grown by Mr. Rudd this year it should score well into the 90s; Souv. de Petite Ami, white; May Foster, white; a yellow seedling, a cross between Harry Balsley and Mrs. Jerome Jones, a fine flower. Mr. Johnson, Mr. Rudd's foreman, is to be warmly congratulated on the fine blooms displayed. Mr. A. McAdams showed a pot plant of the dwarf single pink chrysanthemum Mizpah. It was a little beauty and Mr. Reeve, the foreman, says the plants meet with ready sale at a good price.

Chrysanthemum show passes will this year be given as usual to all members of the Florist Club who are not in arrears for dues. Members in arrears should remit at once to the financial secretary, Mr. C. W. McKellar, 45 Wabash avenue, that their names may surely be included in the list of those who are to receive passes.

The revised premium list for the chrysanthemum show has been issued and contains several new features. Among the special premiums already provided for is a splendid silver cup valued at $25 offered by Spaulding & Co. for "Best 12 new roses never before exhibited in this country." It is expected that the International Competition in chrysanthemum cut blooms will be a most interesting feature to those in the trade. The art exhibit in connection with the show will be made by the Cosmopolitan Art Club and will include the works of artists in eastern cities as well as those of this city. Flowers, art and music ought to make a very happy combination.

Colored chrysanthemum show posters are ready for distribution and anyone in

the trade who has not received one or more to display in his place of business is requested to call on or notify G. L. Grant, 322 Dearborn street.

Mr. Fred Breitmeyer, Detroit, Mich., was among visitors in town.

Philadelphia.

BUSINESS IMPROVING IN SPOTS.—CHRYSANTHEMUMS IN GOOD DEMAND. — ROSES RATHER UNDERGRADE —CORRECTIONS — G. A. STROHLEIN MARRIED.—E. E. LEIKER TO REMOVE TO LANSDOWNE.—IVIES.—NEW WAGONS.

Business has improved a trifle, in spots, as it were, some of the brethren being very busy and others wishing they were. Perhaps if the weather would get cooler things would get better. What demand there is calls for good stock, in fact customers seem to be getting more and more particular and flowers of ordinary grade are very hard to dispose of. Chrysanthemums are holding their own in the race, in fact the demand can be called good. Blooms that retail in the stores from $1 to $3 per dozen are selling as well as anything else, while a few extra choice bring $5 for the same quantity. Roses, particularly Beauties, have not been up to the mark the past ten days; for a while past most of the growers sent in stock in which even among their best dozens many of the roses had fringed or scalloped petals; such frills do not improve the Beauty and in many cases render otherwise fine buds unsalable. What is the cause of this, Brother Simpson? Nobody hereabouts seems to know. Fine Beauties are money makers for everybody concerned, but poor stock puts no wealth in the bank and produces such a state of mind that many a misstep is made on the golden stairs.

Prices are about the same as last week, in fact if anything they are weaker as the store men are buying only for their immediate needs. When flowers are fine dealers are not afraid to speculate a little and will carry more than their daily business seems to warrant in the hope that the beauty and excellence of their stock will tempt the public and thus enable them to sell out. Carnations are still improving and will soon be in championship form as the football experts say of their players. Prices of these flowers are also about the same. Violets are considerably better and some fair stock can now be had; 75 cents per hundred is still highest for the doubles. Supoit is sending some good Princess of Wales; he has an immense stock of this fine variety.

Almost any color can now be had in chrysanthemums. Ed Reid had in the first G. W. Childs last Wednesday and plenty of good yellow, red and pink are to be seen in all the store windows. Prices range from $3.50 to $25 per 100, the majority of the stock going at from $10 to $15. We were in error last week in reference to Pink Ivory; this variety opens nearly white and turns pink afterwards. Mr. Craig's white sport from Mrs. E. G. Hill, the early pink, is a fine thing. Mr. Craig called it Bessie Burton and intends to grow a lot of it next year; it is as early as Mrs. Hill and pure white.

Another error crept into our report of last week in reference to the selling of plants by the H. A. Dreer Co. from their large van. Samples only were carried, so that dealers who have not the time to visit their nurseries could get the next best idea of the stock they carried; orders were thus taken and delivered in the regular way.

Geo. A. Strohlein, one of the Dreer superintendents, returned from a European trip last week. The tour abroad was most satisfactory; the best of everything was secured, including a certain German lady who is now Mrs. Strohlein. Our congratulations are extended to the happy pair.

Emil E. Leiker, of 52d and Greenway avenue, has purchased two acres in Lansdowne, Delaware County, next to Casper Pennock's, and will remove his houses to the new location next spring.

It seems there are a few ivies about this village, our report to the contrary notwithstanding. We referred, gentlemen, to fine salable plants, such as are to be had in the New York market and not stock from 4-inch pots. Anybody can root ivies, but it takes a trained hand to put size and a salable finish to them.

Mrs. M. Heron, of 18th and Chestnut, is to put a new wagon on the street soon; our little bird says it is to be a dandy. H. H. Battles has had one of his painted a light green running gears and body. The sides are decorated with a palette and brushes resting on roses from which starts his signature. Artist in flowers is the idea, which is well conveyed by the design and better carried out by the gentleman himself, who is one of the best in the business. K.

St. Louis.

TRADE GOOD, BUT MARKET OVERSTOCKED. —HARD TO QUOTE PRICES —CORRECTION. —A CARNATION WITH EVERY DRINK — VARIOUS ITEMS.—BOWLING.

Trade the past week has been very good. After a few days of cool weather it has suddenly turned warm again, but no rain, which is needed very badly. The market is overstocked with everything except good chrysanthemums. The general report is that a great many of our best chrysanthemums will be late for the show.

It is very hard to quote prices on roses as the glut is so great that they hardly bring anything. The very best of stock can be bought for $2 and the rest go for 50 cents to $6 per 100 in 1000 lots. Carnations also are plentiful, though good reds are very scarce. Scott, Daybreak and all whites are sold at $1 per 100 and in 1,000 lots can be bought for $5. Cosmos is slow and lots of it is going to the dump pile. Violets are in demand and lots more could be sold if we had them. Valley is more plentiful now but is selling slow at $3 and $4.

Mr. W. W. Stertzing, of the Maplewood Floral establishment, reports that he is the proprietor and that Mr. Bouche is only the landscape architect for him and has no interest in the concern.

The Krebs Floral Co., at 602 Olive street, has distributed a lot of small cards among the down town saloons, stating that any one who buys a drink gets a ticket good for one carnation at their establishment. This very bright idea originated with their manager.

Mr. C. A. Kuehn reports that wild smilax is hard to get just now. A. R. Carter & Co., of Evergreen, Ala., has written that all trains have been stopped for the present.

Mrs. L. Rosenbaum, florist, of Meridian, Miss., spent last week in St. Louis.

All the bowlers who went to Chicago got back Monday morning and the telephones were kept busy asking all about Chicago and the games, and all we could say was that we met the enemy and they beat us; and all we have to complain about is that the finger holes in the balls were too close together. The Chicago bowlers were used to them and we were not. I will not publish the score, but will leave that for the Chicagoans.

One thing I must say: We were never treated better in our lives. Nothing was too good for us. Anything we wanted we could have (except the games) and I am requested to thank the Chicago boys for the royal treatment we received at their hands. But wait until you come in our back yard, and we hope it will be soon, so we may have a chance to get even.

We did not bowl Monday night. The boys thought they needed a rest, but next Monday will find us at the same old place and all feeling better. J. J. B.

Baltimore.

TRADE CONTINUES SLUGGISH.—MR. BINDER'S EXHIBIT OF 'MUMS AT CLUB MEETING.—QUESTION BOX.

Trade continues very sluggish, and prices generally unsatisfactory. Opinions differ as to the cause, but the most competent members of the trade are agreed that improvement will follow the first severe frost.

At the club meeting last Monday night Mr. W. Paul Binder exhibited blooms from five seedling chrysanthemums. The committee appointed to report on them, Messrs. C. M. Wagner, Henry Fisher and Wm. McRoberts, Jr., recommended No. 1 a superb globular white on the order of Niveus, and No. 2 a sulphur yellow much the same in size and shape, for certificates; and praised Nos. 3 and 4 highly, although they were not developed sufficiently to pronounce a decided judgment upon their size and shape. Notwithstanding the slim attendance on account of the continuous rain, the members present took an active interest in the question box and several questions were debated with great spirit. Some humorist in the club put in the question, "Who will pay his mortgage with cabbage next year?", alluding to Mr. Vincent's having told of paying off one of $4,800 with that crop. No one present seemed to feel capable of duplicating the accomplishment and took more interest in the second question, "Best early pink chrysanthemum?" Mr. Fred Burger thought Mrs. Hattie the best, Mr. Fischer supported Glory of the Pacific and Elvina, and Mr. C. M. Wagner held out for Mrs. Parker.

The next question, "Is it profitable to bring chrysanthemums in extra early?", was answered with a decided negative by Pres. Pentland, but Mr. H. Ekas thought it altogether a matter of weather, as a severe early frost made everything else scarce.

"Is there any future for the chrysanthemum?" brought out a surprising diversity of opinion. Mr. C. M. Wagner thought the gardeners as well as the general public were losing interest in them and the prospect was not cheering. Pres. Pentland did not think they would ever pay again, and regarded the present stagnation and low prices as the natural result of overproduction and lack of interest. Mr. Burger took a more hopeful view and thought a severe frost would materially alter the present state of the market for the better. Mr. W. P. Binder said Fisher & Ekas were an example of how a fortune can be made out of chrysanthemums, though they were keeping it quiet.

The general tenor of the discussion seemed to be that the limit of improvement in the flower had been nearly reached. MACK.

Cleveland.

The exceedingly fine weather we have had, one may say all fall, is showing its effects now to some extent. Chrysanthemums, not only in the very early sorts, but in those also that come later, are somewhat in advance of other years with nearly everybody and with a good many for some apparently inexplicable reason, show a slight falling off in quality in a good many sorts. They continue to sell very well, with few going to waste. There is a very evident shortage of good pink ones just now with a good many florists. With such sorts as Viviand-Morel nearly ready to cut this will probably not last long.

Chrysanthemums being in good supply or else the fine weather lending itself to the rapid development of other flowers, brought out the rose signs the other day that ordinarily do not appear until the gentle spring time. "Roses 25 cents and 50 cents per dozen to-day," they read. There may have been other reasons satisfactory to the proprietors of the signs, through certainly no other grounds appear on the surface.

Gasser's window has been particularly beautiful the last few days, a log handsomely decorated with cattleyas forming the principal feature.

Arrangments for the chrysanthemum show are progressing satisfactorily. Arrangements were made at the last meeting whereby the advertising end will be thoroughly attended to by experts in that line, upon terms that certainly appear very advantageous to the florists' club.

Cameron Seed Co., ——, Neb.	143083.00

Total, 24 bids accepted for consideration.
Total, 42 bids received, 18 of which being for fractional parts of the entirety were not considered. There remains an unexpended balance of about $30,000 yet to be used.

MR. LESTER MORSE, of the firm of C. C. Morse & Co., Santa Clara, Cal., is now on his eastern trip.

VISITED CHICAGO: California seed growers—Mr. J. M. Kimberlin, Chas. Parker and Lester Morse of C. C. Morse & Co.

CARDS are out announcing the coming marriage of Mr. Jno. T. Buckbee and Miss Florence Williams Day, at Lansing, Mich., November 2.

VISITED CHICAGO: Mr. J. M. Kimberlin, of Santa Clara, Cal. Mr. Kimberlin reports the crop of onion bulbs for present season's planting to be considerably less than last year.

NEW YORK.—Messrs. Eicke, Stumpp & Walter, all late employes of the defunct F. E. McAllister Company, have opened a seed and general supply store at 50 Barclay street under the firm name of Stumpp & Walter Co.

IN A PRIVATE LETTER J. Bugnot, the famous French pansy grower, writes Vaughan's Seed Store that the rainy season this year in France has injured the germination of these seeds. He adds, "I must remark that my pansies furnished few seeds and as a rule the germinating quality is not so strong as is the case with ordinary varieties."

MR. T. W. WOOD, chairman of the American Seed Trade Association, has mailed under date of October 20, 1897, to each senator and representative of the national congress a very vigorous two-page letter explaining with numerous reasons why the government free seed distribution is unjust in many ways, and adds that it is "destructive to the business of seedsmen, who have a right to look to the government for the protection of their interests."

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

250 at 1000 rate.

We also have a moderate stock of all other FALL BULBS.

Cincinnati.

The market continues about the same as at last report; all kinds of flowers are plentiful. The market is simply overcrowded, not so much because of any excess of supply, but purely from lack of demand. Chrysanthemums are coming in much better, also in more variety. Violets are rather scarce yet, but enough to go around.

I am glad to report that Mr. C. C. Murphy is able to be up and around again.

Mr. M. Rice, of Philadelphia, was with us the past week, looking up business. Mr. J. Austin Shaw, representing H. Siebrecht & Son, of New York, was also a caller. H. SCHWARZ.

READING, PA.—It has been decided not to hold a chrysanthemum show here this year.

MONTPELIER, VT.—The Montpelier greenhouses, leased by E. Jacobsen, have been sold to be removed.

GROVELAND, MASS.—T. H. Benton has leased the "Pine" greenhouse and will devote it to cucumber raising in future.

NEWBURGH, N. Y.—George Crawshaw has started in the florist business here with two 100-foot houses of carnations and another of violets. His stock is in excellent condition, and George's prospects for the first season are bright.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

ASSOCIATION MEETING.—THE COMING SHOW.—BULB PLANTING.—FINE 'MUMS.—A SEEDLING CARNATION.

The regular meeting of the Gardeners' and Florists' Association on Tuesday last was well attended and a lot of business was done, principally connected with the coming show. Oak leaves will be a great deal used in the decorations this year, but the arrangement of the hall will probably be about the same as last year. It is difficult to make much change without going to a good deal of expense and this the association is not prepared to do just now. The tariff question was up again for discussion; the special committee has more work to do yet in the matter and will see that the wishes of the association are carried out if it is possible. Mr. Alonzo Watkins junior, lately at H. A. Dreer's Riverton place, was present at the meeting and told us something about how they do things there; he had not been home for six years and his own father hardly knew him.

A good deal of bulb planting has been done in the parks the last week or so in spite of the dry weather. Mr. Chambers has filled some of the beds in front of the Parliament buildings with conifers which takes off "that bare look" considerably.

Mr. Geo. Mills, of Ossington avenue, in partnership with Mr. Thompson of Dovercourt Road have grown at the latter's place two houses of 'mums which the other day were looking very fine, especially Pink Ivory. Since then they have been cutting and getting top prices. Mr. Mills is growing largely at his own place one of his seedling carnations, a creamy (turning white) lancy, edged and splashed with bright rose which he has named "Abundance." It is very prolific, good sized flower, stiff stem, strong calyx and sells well. It will probably come into competition with others at the show.

Weather still fine and warm; a good stiff spell of cold weather would help trade now. E.

Worcester, Mass.

TRADE CONTINUES SATISFACTORY.—NO OVERSTOCK.—BEST 'MUMS NOW READY.—NEW CARNATIONS.

Trade continues to be very satisfactory, considering all things, with prices about the regular thing and good flowers plentiful, but not too much so. 'Mums, of course, are coming in in quantity now and are first-class in every respect. The growers have about sized up the trade and nothing larger than what retails for $3 to $4 per dozen are grown. Yellow Queen, Wm. Simpson, Mrs. E. G. Hill, Gold Lode, Ivory and Lenawee are the best varieties ready at this writing, and the earlier varieties are nearly cleaned up.

Roses are coming in about as fast as we can use them and improving fast. C. A. Dana, Victor and Nivea are some of the new varieties of carnations that are showing up well so far and we are getting plenty of good flowers of the standard varieties, and the advent of the 'mums has not shortened the sales noticeably as yet.

The weather continues warm, and violets as a rule are running pretty small. Princess of Wales is not showing up as it should as yet, but the weather is against anything in the violet line, so we will have to wait awhile before bringing out a verdict. A. H. L.

Always mention the American Florist when writing to advertisers.

4 Acres Field-Grown Carnation Plants, 94,000.

Our carnations are grown with the greatest care, and are first-class plants. Free from disease. We pack light by our improved system of packing, by which we can send them to all parts of the United States and Canada in perfect condition.

CRIMSON SPORT, DELLA FOX, BUTTERCUP — $1.50 per dozen. $8.00 per hundred.

ALBERTINI, BRIDE OF EARLESCOURT, CHESTER PRIDE, NICKELSON — $1.25 per dozen. $6.00 per hundred.

SWEETBRIER, MRS. CARNEGIE, L. L. LAMBORN, SILVER SPRAY, PORTIA, GRACE WILDER, CHESTER PRIDE, WM. SCOTT, ROSALIND — $1.00 per dozen. $5.00 per hundred. $45.00 per thousand.

Syracuse, N. Y.

THE CHRYSANTHEMUM SHOW.—EXTREMELY HOT WEATHER.—POT CHRYSANTHEMUMS DON'T MEET WITH MUCH FAVOR.—A QUICK SELLING FERN.

Work in connection with the coming chrysanthemum show is being rapidly pushed along. The large Alhambra rink has been engaged for the occasion and the various committees on decorating, advertising, etc., have been appointed. Numerous special prizes were added to the premium list at the last society's meeting. Intending out of town exhibitors are reminded that the E. C. Stearns Co., manufacturers of the Yellow Fellow wheel, have given one of their high grade wheels, valued at $100, as a special prize for a new and distinctive yellow seedling chrysanthemum not yet disseminated, the winning variety to be named the Yellow Fellow. Only plants in pots can compete. Entries for the flower show must be made not later than November 5.

We have been experiencing extremely hot weather for the time of year, which has made flowers much more plentiful, still but very little has been consigned to the waste barrel, as trade has been very brisk indeed. Carnations and violets are yet a little scarce, but roses and chrysanthemums are abundant, the former especially, of which American Beauty has had an unprecedented sale the past week. In chrysanthemums Merry Monarch is the favorite, fetching much higher prices than Bergmann. Marquis de Montmort is an early pink, but that is about all that can be said about it in our section at least. In yellows Whilldin is the best seller at present.

In the plant line some well grown plants of Bergmann and Whilldin 'mums are in, but they are not meeting with popular favor, the trade going more to palms and ferns. Of the latter Nephrolepis nana compacta cordata, when well done in 5 and 6-inch pots, sells very readily, fetching from 75 cents to $1 each. Some fine flowered cyclamens are also seen, but they don't command the price here they should.

ALPHA.

Westwood, O.

J. A. Peterson, though out of sight literally, being in a hollow, yet on a hillside, is not by any means out of mind, and judging by the splendid condition of his stock in general, this season should find his bank account considerably swelled. Looking through houses of Beauties, Meteors, Bride, Bridesmaids and Perles revealed a stock hard to beat. Chrysanthemums galore, Glory of the Pacific, Merry Monarch, H. L. Sunderbruch, Golden Wedding, foliage of the latter measuring 9¾ inches in length and like leather. Several seedlings are of promise and being well tested before taking or rather seeding out. In carnations under glass, Outcast is keeping up its reputation with Emma Wocher. Violets Luxonne on center with Marie Louise on side benches.

Two houses each 125x20 feet recently added, are models; inch iron purlins and uprights, benches three feet high formed of 2-inch piping running lengthwise, cross ties resting upon brick pillars, red cedar benches, cement walks; a three-quarter span 120x12 feet on same principle for propagating house is being completed. Hot water under pressure is to be the method of heating. Fancy varieties of dracænas, Adiantum Farleyense and similar stock will be given special attention. The retail trade demands this, also orchids extensively. V. M. C.

BUSINESS CHANGEABLE.—NOW BRISK AGAIN.— PLENTY OF 'MUMS.— PRICES HOLDING UP FAIRLY WELL.—SALE OF BRIGGS' BROS. & CO.'S GREENHOUSES —A VENISON DINNER ANTICIPATED.

The first half of the week cut flower trade was rather slow with an abundant supply on hand; there was not even the usual demand for funeral work, but the decline in business was only temporary, caused probably by the rainy days that came at last and broke the dry spell; since then the demand is as brisk as ever. Chrysanthemums are very plenty and sell at all prices in the market; really good flowers can be bought for $18 and $20 per 100, while smaller flowers may occasionally bring only $1 per 100. The retailers are still trying to keep up last week's prices and in most cases have succeeded so far. Violets are in good demand and the quality is again improved; the best I have seen came from Geo. Keller who for some years past has made a specialty of growing them for this market. Roses also are now better in size and color but prices are not any higher than last week, neither have carnations advanced any, though the market has not been overcrowded with them this fall.

The E. R. Fry Co. has purchased the greenhouses of Briggs Bros. & Co. The houses have to be removed from the premises by June 1, '98, unless Mr. Fry can make different arrangements with the owners of the land. At any rate they may remain there for the present, and as everything is in good working order, running them this winter will assist greatly toward paying for the outlay.

Al. Salter, of Salter Bros., and Chas. Vick, together with a few more gentlemen not in the craft, went on a hunting expedition to the Adirondacs. The party was well provided with bait of every description; probably they want to go fishing too; we don't care if they only fulfill their solemn promise to the Florist Club of that fine venison dinner when they return. K.

Poughkeepsie, N. Y.

At the last meeting of the Dutchess County Horticultural Society it was announced that the following gentlemen had accepted the invitation to officiate as judges at the chrysanthemum exhibition November 3, 4 and 5: Messrs. William Scott, Buffalo; Samuel Goldring, Albany; A. D. Rose, Jersey City; Henry Siebrecht, New York.

Mr. William Russell, of Millbrook, gave an interesting address on hothouse grapes grown outside. He had been successful in growing well finished bunches weighing from one to two pounds of Black Alicante, Black Hamburgh and Buckland Sweetwater. These were grown on a wall with southern exposure, protected with plant cloth in early spring and buried in winter.

Not overrated

"I am personally convinced that it is the very best Hot Water Heater in the market. It is compact, easily set up and handled, is very economical. . . . . There are many in Buffalo who are using the 'Spence' and who are perfectly willing to give testimonials as to the perfect working of the heaters. I can assure you that this heater is in no way overrated, but is doing more work than is claimed for it"

LOUIS W. GAY, Buffalo.

SPRINGFIELD, MASS.—Wm. H. Copeland an enthusiastic amateur horticulturist died on October 31, aged 72 years.

Chrysanthemum Culture.

BY MR. O. STOLLERY.

[*Read before the Chicago Florists' Club, Oct 28.*]

I think the best place to start this subject of growing chrysanthemums is from the time the flowers have been cut the year previous. Our method is to select good stock plants of the varieties we intend to grow the coming season, place them in pots, and give them the lightest and best place in a temperature of 50° to 55°, keeping them on the dry side, our object being to keep them dormant as much as possible till we want to begin propagating. I may mention here that last year we put some out in frame and outside without any protection except some loose straw thrown on top of them till along in January and we were very well satisfied with the results. When brought in they were frozen solid but after thawing out they started finely, and we got some good strong cuttings from them. In this way we gave them a rest that would be impossible in a greenhouse of the temperature before mentioned.

Our time for propagation depends on what size we want our plants to be when planting time comes. Varieties that are slow growers we start about the end of January, good growers considerably later. We like all our stock to be nicely rooted in 3-inch pots for planting with the exception of a few varieties. Viviand-Morel we like to be in a hard condition in 3¼ or 4-inch pots, as it always produces buds in a young state and we find the best results are obtained from suckers, of which they will produce plenty when in a hard state. As soon as planted in the bench the suckers go right ahead, when we select two of the strongest, cutting out the original plant entirely.

I might go on for hours detailing these little peculiarities of different varieties but it is needless. Experience is the only teacher one can have, and anyone having a love for his work will soon find them out. About the first week in June we clear our houses ready for planting, hosing our benches over and giving a good coat of fresh slacked lime. On the bottom of the benches we put about one inch of well rotted cow manure, after which we put in enough soil to make 4½ inches deep. For soil we use that which comes from the river west of Bowmanville. The heavier the soil for 'mums the better we like it so long as it is top soil. We haul this soil in the fall for the next season's work, giving the frost a chance to pulverize it, using very little manure, about three loads of cow manure to twenty of soil. This manure we place in the center of the heap and when the pile is turned it gets mixed all through. It is possible that getting our soil from the banks of the Chicago river we do not need as much manure as we otherwise might as that river is famed for its extracts, some of which are undoubtedly left on its banks.

Having our benches filled we are ready for planting. As to the distance apart we are guided by the variety to plant. As we grow all our plants (with one or two exceptions) to two flowers to the plant, we plant farther apart than we would if grown to single stem. The average distance is about 8 inches in the rows and 9 inches between. As a good many growers believe it best to grow to single stem I will give our reasons for preferring the double method. In the first place we only need half as many plants, which means considerable in room and time in the spring; second, by planting farther apart and letting them break about 8 inches above the soil we have that much more room for air to pass between, and there is plenty of room for mulching or working the soil any way we may want. Mrs. A. J. Drexel and Major Bonnaffon grow best to single stem. These we plant two plants together as close as we can get them and leave the same distance between as for the double system.

Having our benches planted we are fairly started. We water sparingly so as not to sour our soil before the plants are ready to take up the moisture, and as soon as 6 inches high prepare for tying up. Like Mr. Wm. Scott we say there is only one way to tie up 'mums; that is by running wires lengthwise of the bench, as many wires as there are rows, one wire just above the soil, another about 4 feet above, according to the growth of the variety to be tied up, and then running strings between the wires, one string for each growth. Some may say too much trouble. It looks more trouble than it really is, and you save time in the end for when tying to the strings as the 'mums grow up all you have to do is just turn your stem around the string and it is done, and strings are a great deal better than stakes when cutting. After getting them tied up all the attention required is as to watering and keeping them supported by the strings and looking after a few of the 'mums' enemies: Cut worms, black and green aphis. The cut worms have been a good deal of trouble to us the past three seasons. Working in the night they are not noticed till the damage is done. The only remedy we know is hunting them by lamp light, when they are out for food. If this is done persistently they can be held in check, but if neglected they do a

lot of damage in a short time. The aphis is an easier matter. For these we use Rose Leaf extract of tobacco, both for syringing and vaporizing. It is sure death to them and leaves no bad results even when the plants are in full flower. For syringing we use one part extract to 60 of water, spraying on finely with a syringe. While 'mums will take a large amount of water we are careful during their growing period not to give too much or the plants will be soft, will run up to a great height, and produce inferior flowers in the end. We allow ours to dry out good at least once a week; this will keep them hard and prevent the hanging of their heads during the hot weather.

Taking the buds comes next. Some varieties will show a bud in July; it is no good so rub it out. It is very tempting to take first buds, especially when they look good, but our experience tells us that it is useless to take buds before August 15; between August 25 and September 1 is best for the early varieties. Buds taken August 30 are far superior and just as early as buds taken the 10th. This taking of buds is a very important item in the growing of high grade 'mums and should be attended to every other day at least. Some varieties are best on terminal and some on the crown. The bud that is best must be found out by experience. In trying novelties we allow some to come on crown and some on terminal of each variety; by this means we find out which bud is best.

As soon as the buds are taken we turn our attention to fertilizing the soil. For this we depend almost entirely on cow manure. The only artificial fertilizer we have used this season has been blood and bone and nitrate of soda. We have not been very much impressed with the former. Nitrate of soda we use on all our crops more or less, and find it of great value. Chemical fertilizers are undoubtedly of great value, but to apply intelligently one needs to know what his soil contains. To do that a man must be somewhat of a chemist. This would apply to cow manure to some extent, but the danger from overdoing it is less.

As soon as buds are set we give a mulch of one inch, consisting of two-thirds rotted cow manure to one of soil, sprinkling some soot and wood ashes through, and mixing all together. This mulch we give twice from the time the buds set till they begin to show color. In liquid form we also use the same except the soil, applying twice a week or oftener, according to our judgment. After the buds show color we stop all fertilizers.

We make a practice at this season of going all through twice a week, rubbing out all side shoots, keeping a sharp lookout for caterpillars, which begin at this time to get in their work. As these pests are left us by the white butterfly, also a little moth that can be seen at night; it is best to kill the caterpillars by catching the butterflies earlier in the season.

And now we come to the time that we have been looking forward to—the flowering period. According as we have been attentive to the wants of the plants will the results be. In closing let me add: Don't spoil a whole season's work by cutting before the flowers are finished. This is a common practice in Chicago, and the results can be seen any day in all the commission houses. Flowers that would come pretty near being first-grade stock if left to develop are completely spoiled by being cut before they are fully developed.

Coming Exhibitions.

Chrysanthemum Society of America.

The committees judging new seedlings will be in session November 6, 13, 20, 27. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than Tuesday of the week the blooms are to be shown. Blooms forwarded to any of the following addresses, express prepaid, will receive careful consideration:

BOSTON—A. H. Fewkes, Horticultural Hall.

NEW YORK.—Eugene Dailledouze, care New York Cut Flower Co., 119 W. 23d street.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street.

CINCINNATI.—R. Witterstaetter, corner 4th and Walnut streets.

CHICAGO—W. N. Rudd, room 202, 185 Dearborn street.

Those desiring further particulars address ELMER D. SMITH, Sec'y,
Adrian, Mich.

Work of the Committees.

At the meetings on October 30, seedlings were passed upon as follows:
